If ever a man looked the part of a bishop, Dr. Potter did, as tho even if he said nothing it would be impressive. He was a notable leader, a man of the world as well as a churchman, a preacher of power and welcome as an orator in politics or at dinners, capable in negotiation and tactful in diplomacy. He wanted always to be doing something, and to have his people doing something. "Growth" might have been his watchword. His presence in New York was almost dynamic and was emphatically felt from the time he set foot in the city. Canon Schwab had prepared much of this book when death held his hand, but Dr. Hodges has admirably finished the work thus begun, and his own biography might well be included with the books by Liddon, Benson, and Newbolt, which Bishop Potter commends as text books on the work and activity of Minister and Church. But while the book might answer this useful purpose, it amply presents Dr. Potter's wider service as a Christian citizen in the Young Men's Christian Association as well as in the St. Andrew's Society, and in the movements for good government, and better social conditions.

It is a happy fact that the father of his country is perpetually contemporary. Some one has said that Washington must have been a wonderful man to see, that in all the thousand representations of him, no artist had yet robbed him of a look of greatness and dignity. It may be said in addition that biographers also all leave him still towering among men. We hope that the time may never come when there is not a call for yet another life of him, a study or sketch from some new angle. The book at hand is *George Washington: Farmer.* He was a "man in love with the soil," says our author, and despite some drawbacks, he made a great success at farming both before and after his success in nation culture.

The book is, of course, not scientific, but is what it should be, a very readable account of Washington in every day private life—his testing of crops, dealing with markets, management of slaves (and regret that he had to manage them), his domestic affairs, something of his guests and something of his family. The illustrations are good and pertinent.

The Life of John Hay, by W. Roscoe Thayer. 2 vols. Houghton Mifflin Co. $5. *Memories of a Publisher, 1865-1915*, by George Haven Putnam. G. P. Putnam's Sons. $2. *Henry Codman Potter*, by George Hodges. The Macmillan Co. $3.50. *George Washington: Farmer*, by Paul Leland Haworth. Indianapolis: The Bobbs-Merrill Co. $1.50.

The War

Nothing of human interest is unaffected by the great war. Art and literature as well as politics and economics will never be the same again. The changes in philosophical and religious opinion are likely to prove more permanent and important than the changes in national boundaries. This is beginning to be realized and so we find the new books are not confined to the causes of the war and its progress, but treat of its aspects from various standpoints.

A Hollow on the Marne, by Mildred Aldrich, is one of the few war books that are real literature that are worth reading, apart from the information they contain. That a Boston woman seeking seclusion in an out of the way

French hamlet should have found herself at just the point reached by the German wave at its high is too improbable to be invented; it had to happen. How she felt about it may be seen from her answer to the French officers who inquired how it chanced that she, a foreigner, should be living alone on top of a hill in the midst of the war:

I answered frankly, as if these men were old friends, and not the acquaintances of an hour, that, as I was, as they could see, no longer young, very tired, and yet not weary with life, but more interested than my strength allowed, I had sought a pleasant retreat for my old age—not too far from the city of my Love—and that I had chosen this hilltop for the sake of the panorama spread out before me; that I had loved it every day more than the day before; and that exactly three months after I had sat down on this hilltop this awful war had marched to within sight of my gate, and banged its cannon and flung its deadly bombs right under my eyes.

Do you know, every mother's son of them threw back his head—and laughed aloud.

Made in Germany, altho by an American clergyman, the Rev. Franklin M. Sprague, exceeds in the violence of its partizanship the literature of the nations at war. We sympathize with his moral indignation at the atrocities and violations of international law, but his book would have been more effective if he had been less reckless in his language and inaccurate in citations. We agree with his denunciation of Germany for violating the neutrality of Belgium, but would it not be well at least to mention in this connection the violation of Chinese neutrality by Japan, of Persian neutrality by Russia and England and of Greek neutrality by England and France during the war? Mr. Roosevelt contributes a preface in which he expresses approval of Mr. Sprague's attack on the pacifists and his criticism of the President for not intervening in behalf of Belgium.

War, Science and Civilization differs from most of these books in coming from the mind of a scientist, William E. Ritter, Director of the Scripps Institution for Biological Research of the University of California. The question he considers is: "Can a way be found whereby the nations of the world, some of which truly need a larger share of nature's wealth than they possess, while others possess more than they really need, may adjust their relative needs without resort to war?" He recognizes what the legal-minded writers ignore, that the partition of the earth among the several nations, according to historic claims, is not a just one and cannot endure. Unless, then, some rational and peaceful way of changing national boundaries to fit growing races is found wars are inevitable and these will be of increasing frequency and greater destructiveness. Professor Ritter's style is so heavy and obscure as to make the book hard reading, but it is worth the effort.

In other and happier times *The Heart of Europe*, by Ralph Adams Cram, would be a peaceful work of art and history, with no more belligerency than is inevitable when an author worships at the shrine of the Gothic and detects all others. But now its descriptions of the cathedral of Rheims, the cloth hall of Ypres, the *hotel de ville* of Arras and other architectural victims of the war are written with passion and pathos. Why could not the Great War just have been fought out in Tibet or Sahara instead of where the monuments of medieval art are thickest? The buildings and pictures of Flanders and northern France have been "written up" from the tourist standpoint hundreds of times before, but this volume is worth a hundred such, because Mr. Cram knows how to explain to us how these masterpieces came to be produced and why we cannot produce them now.

Professor Clapp holds the Department of Economics in New York University. His volume, *The Economic Aspects of the War*, is a detailed study of the effect on American and other neutral commerce of the British orders in Council which extend the meaning of contraband goods and allow detention or capture of neutral vessels carrying wheat, cotton, copper, etc., assumed to be destined for German consumption. It is a severe arraignment of the British policy. The author makes it perfectly clear that international law as hitherto understood and as defined in the Declaration of London has been violated in the largely successful British attempt to suppress all German commerce and that without a technical blockade of the German ports.

The editor of the London *Economist*, F. W. Hirst, brings out a careful study of the *Political Economy of War*—not of this war alone, but of war in general from the seventeenth century to the present. He shows how the armament manufacturers of different countries have for years worked together to pile burdens upon the people. He estimates the cost of previous wars and shows how they were ultimately paid for. The present war has already eaten up four years of British and six years of German savings. He fears that the war will not end until the wealth of the belligerent countries is dissipated and their credit exhausted.

This war, like every other, will give rise to many controversies as to what mistakes were made at critical points and who was to blame for them. Already we begin to hear them, altho in the absence of full official reports such discussion is largely hypothetical. Count Charles de Souza and Major Haldane Macfall in their ambiguously named volume, *Germany in Defeat*, analyze the strategy of the war on the western front up to the battle of the Marne and discuss a number of interesting questions in a very outspoken way. They blame General Larenzac, commander of the Fifth French Army, for the defeat at Mons which came near destroying the British contingent. The failure of the Germans to conquer France they credit to Joffre's strategy and Foch's attack at Fère Champenoise on September 8, 1914. They differ from most commentators in holding that the Germans could not have taken Paris at that time and did not intend to. But whether they are right or wrong in their criticism, they analyze the campaign with acuteness and state their points clearly with the aid of battle maps.

One of the best descriptions of the present war was written a few months before it broke out, by Frederick Palmer, in his novel, "The Last Shot." We can only hope, we can hardly expect, that the real war will end as his imaginary war did, in a real peace. As the only official representative of the American press with the British army in France, Mr. Palmer had exceptional opportunities for observation and we all know that he has exceptional powers of expression. In *My Year of the Great War* he deals with the human element and does not discuss questions of strategy. With the scenes of life in the trenches and back of them we are by this time all rather familiar, but the final chapters of the book, in which he describes the British navy, the silent reserve force which yet dominates the war, have novelty as well as interest. We cannot forbear to quote some passages of his impressions as he sees the greatest fleet the world has ever known steam out of its haven:

One division, two divisions, four ships, eight Dreadnoughts—even a squadron coming out of a harbor numbs the faculties with a sense of its might. Sixteen—twenty—twenty-four—it was the unending numbers of this procession of sea-power which was most impressive. An hour passed and all were not by. One sat down for a few minutes behind the wind screen of the destroyer's bridge, only to look back and see more dreadnoughts going by. One had not realized that there were so many in the harbor. He had a suspicion that Admiral Jellicoe was a conjuror who could take dreadnoughts out of a hat. The first was lost in the gathering darkness far out in the North Sea, and still the cloud of smoke over the anchorage was as thick as ever; still the black plumes kept appearing around the bend. . . .

One's imagination sped across seas where he had cruised into harbors that he knew and across continents that he knew. He was trying to visualize the whole globe—all of it except the Baltic seas and a thumbmark in the center of Europe. Hong Kong, Melbourne, Sydney, Halifax, Cape Town, Bombay—yes, and Rio and Valparaiso, Shanghai, San Francisco, New York, Boston, these and the lands back of them where countless millions dwell were all safe behind the barrier of that fleet.

The volume entitled *J'Accuse!* which created such a sensation in Europe when it was published in Switzerland last spring, will not in America produce such an impression, for it covers the same ground as many earlier books. Its chief significance is, of course, that it was written by a German and condemns Germany, both for precipitating the war without reason and for brutality in the field. The Germans say that the author is Dr. Richard Grelling, "a fugitive from justice" on account of his "shady transactions." But it does not matter who he is or what he has done. The argument of the book is clear and keen and the evidence supporting it is given by quotations in the text, so the reader can form his own opinion. The military situation, of course, has changed since the book was written to the advantage of Germany, but the moral case against Germany

has been strengthened rather than weakened by the later course of the war. The author looks forward to the overthrow of the monarchy as the only assurance of peace.

Senator Albert J. Beveridge, in *What Is Back of the War?* approaches the question in a different way than other writers. He is concerned with the opinions of the belligerent peoples and went to Europe to find out what is being said and published in the newspapers. He interviewed all sorts and conditions of men on both sides from the Kaiser to a London cabby, including such diverse minds as Hindenburg and Bergson, Harnack and Hervé, Südermann and Shaw, Tirpitz and Bryce. Surely no interviewer ever bagged such big game in one short season. Besides this he had a chance to see the fighting lines of both the east and the west. He reports what he saw and heard with impartiality, but seems to be more favorably impressed with Germany than with France and with France than with England.

A Hilltop on the Marne, by Mildred Aldrich. Houghton Mifflin Co. $1.25. *Made in Germany*, by Franklin M. Sprague. Boston: The Pilgrim Press. $1. *War, Science and Civilization*, by William E. Ritter. Boston: Sherman French & Co. $1. *Heart of Europe*, by Ralph Adams Cram. Charles Scribner's Sons. $2.50. *Economic Aspects of the War*, by Edwin J. Clapp. Yale University Press. $1.50. *Political Economy in War*, by F. W. Hirst. E. P. Dutton & Co. $2. *Germany in Defeat*, by Charles de Souza and Haldane Macfall. E. P. Dutton & Co. $2. *My Year in the Great War*, by Frederick Palmer. Dodd, Mead & Co. $1.50. *J'Accuse*, by a German. George H. Doran Co. $1.50. *What Is Back of the War?* by A. J. Beveridge. Indianapolis: Bobbs-Merrill Co. $2.

All Round the World

Books of travel are not a large part of the season's output, tho what there are take one well over the globe, from the Battery to the Pole and around. Starting then from the Battery, Sarah Comstock's *Old Roads from the Heart of New York* is a practical and attractive guide. Illustrated by excellent photographs, it describes the historical and picturesque features lying within a thirty mile radius of the Battery. Its itinerary will be useful to all who still love the ancient sport of tramping as well as to those who wish objectives for short auto trips.

Mr. and Mrs. Hale tried nothing over-venturesome in their outing described in *We Discover New England*. Starting from Fifth avenue they followed the Connecticut thru Massachusetts, branched off to the Winooski, climbed the White Mountains and descended on the other side to touch the corner of Maine. Via Boston and Newport they struck that most excellent auto road skirting the Sound, and stopped at Norwalk to get a charming sketch of the Royal George Inn. But pleasant chat about familiar regions is by no means without interest, and Mr. Hale's drawings give the trip individuality, over well trodden ground tho it be.

From the New England meeting house to a Mexican cathedral is more than across the United States. It is across three centuries. Churches are, architecturally, the great features of that land, and Mrs. John Wesley Butler's account of the *Historic Churches of Mexico* is illustrated by many interesting photographs and full of the legendary lore that has gathered around these ancient buildings and their images.

Storied Italy is Mrs. Hugh Frazer's new book of entertaining chat. A native of Rome, her descriptions are full of understanding, born of long association and religious fellow feeling, while her stories, from that of St. Francesca of Rome to the incidents of this year's earthquakes, are vivid and picturesque.

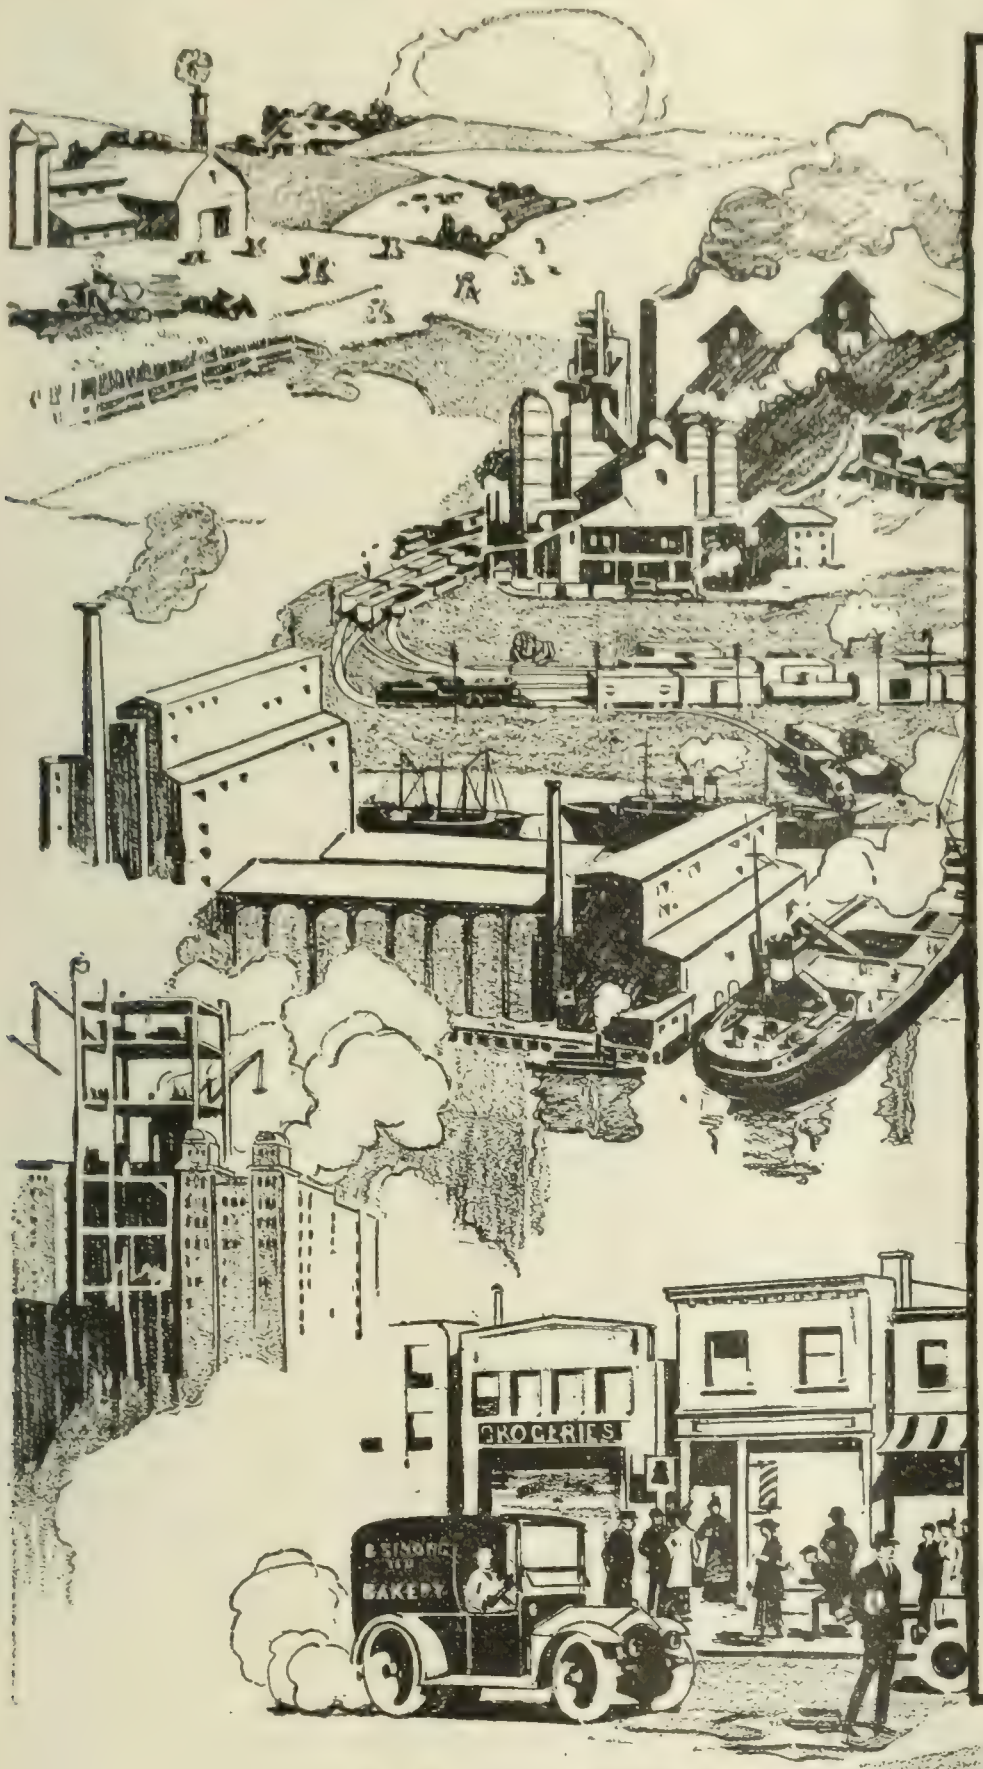
Constantinople Old and New is not the very newest, as its author, H. W. Dwight, confesses, for the war that fills the last chapters is that of 1913. None the less it is of timely interest and the better work because there is no attempt to even it with the latest bulletin. It is written *con amore*, by one who has known the city long and well. Born in Scutari, with amusing recollections of the life there, he dwells appreciatively on little known attractions and beauties, and the descriptions as much as the uncommon illustrations—there are more than 150 of them—make the reader wonder anxiously if this loveliness also be doomed. It is a pity we are driven to such heavy paper for our illustrated books, and that a volume as delightful to read as to look at should be such a weight.

The journey recounted in *The New Russia*, by Alan Lethbridge, ended with the opening of the war, and the most picturesque pages are those describing the Cossack messenger giving the warning to the men in the fields and the trip down the Irtish with the reservists. The wanderings were in the little visited regions of the White Sea and the Urals, and the book discusses the vastness of the untouched resources and the trade opportunities as well as the life and the scenery. The picture of these Russians is happy and attractive, a novelty which makes one hope that some of the views of them by their own people are exaggerated. Naturally the point of view is English, and there are interesting analyses of the anti-German feeling that the writer found everywhere, among small trade folk as well as among those of the higher class.

The Southern Congo, as seen thru the eyes of the business man, is what one may find in J. B. Thornhill's *Adventures in Africa*. He describes not the land, nor the life of the native, but the plans and the daily doings of the white men engaged in opening up the continent. The varied dangers incident to mining and bridge and railroad building in this new land with some good hunting stories are tersely told, while a discussion of the Congo rubber trade and of what appears far worse to Mr. Thornhill, the Portuguese slave trade, are perhaps the most noteworthy features of the book.

Mrs. Jack London's *Log of the Snark* is a leisurely, entertaining narrative of those leisurely, entertaining but distinctly trying eighteen months between San Francisco and Australia, of which her husband's "Cruise of the Snark" is the earlier fruit. Mrs. London, however, does not trespass on his preserves, and has no dearth of adventures for her own use. Of these the night at Malu and the visit to the furry folk of New Hebrides strike a stay-at-home as far more uncomfortable than any combination of storm and coral reef. Dangers were made up for, however, by all sorts of entertaining happenings among the islands of the south seas, and, for those who love to know how that strange bird, the author, disports himself, there are many amusing allusions to the Skipper of the *Snark*.

The Voyages of Capt. Scott, retold by Charles Turley from "The Voyage of the Discovery" and "Capt. Scott's Last Expedition," is most skillfully done. As tho one were with them the reader feels the courage of the men, the lovableness of the leader, the piteousness of the dogs, the enthusiasm of the quest, the daily privations, the disappointment, the inevitable tragedy. Barrie's delightful introduction presents the reader at the outset to Scott the man. The photographs are full of interest, and really beautiful are the reproductions of the watercolors made by Dr. Wilson, who died with his leader.



Old Roads from the Heart of New York, by Sarah Comstock. G. P. Putnam's Sons. $2.50. *We Discover New England*, by Louise Closser Hale. Dodd, Mead & Co. $2. *Historic Churches of Mexico*, by Mrs. John Wesley Butler. The Abingdon Press. $1.50. *Storied Italy*, by Mrs. Hugh Fraser. Dodd, Mead & Co. $3.50. *Constantinople Old and New*, by H. G. Dwight. Charles Scribner's Sons. $5. *The New Russia*, by Alan Lethbridge. E. P. Dutton & Co. $2. *Adventures in Africa*, by J. B. Thornhill. E. P. Dutton & Co. $3.50. *The Log of the Snark*, by Charmian K. London. The Macmillan Co. $2.50. *The Voyages of Capt. Scott*, by Charles Turley. Dodd, Mead & Co. $2.

Stories to Taste

After a thoughtful interlude in which it pondered on all things problematical, fiction once more trips the light fantastic toe for the entertainment of the workaday world. There is a little aftermath of seriousness, however, in such books as Henry Newbolt's *Aladore* and *God's Man*, by George Bronson Howard. Both are tales of knight-errants of large ideals who sally forth to remodel the universe, but the contrast of treatment could hardly be greater. The first is an allegory, a quaint romance in which the knight is permitted to find the city of his vision, but the latter is twentieth century realism and thrusts its knight into jail. In some phases Mr. Howard has done a brilliant piece of work, but in his attempt to encompass the economic conditions of the big city, to flash upon his pages each passing scene, each character with which L'Homme-dieu comes in contact, the book becomes too kaleidoscopic to be unified.

Jack London, too, is puzzling the social conscience of the "cotton-wool millions" and makes his graphic pen the princess in harrowing. *The Star Rover* is a "life" in a California prison who finds release from the torture of the straight-jacket in a sort of self-hypnosis, when his soul becomes a part of "other-worldness, of other-lifeness." The book is necessarily fragmentary,

Business is booming!

Dayton, Ohio.

Merchants everywhere tell our 800 salesmen that business is booming.

Farmers have had two record crops, at big prices, with big demand at home and abroad.

Stocks of manufactured material are short, and labor is in great demand.

Exports largely exceed imports.

Factories are busy, many working overtime.

More freight cars are needed, and steamers are taxed to capacity.

People are living better, and spending their money more freely.

This country has the best money in the world, and more of it than ever before.

Such a combination of favorable circumstances never has occurred before, and probably will never occur again.

Billions of dollars are passing over the merchants' counters.

The people who spend this money want the best service.

They demand it in all kinds of stores, from the smallest to the largest.

They get it in stores which use our up-to-date Cash Registers, which quicken service, stop mistakes, satisfy customers, and increase profits.

Over a million merchants have proved our Cash Registers to be a business necessity.

[*Signed*]

John H. Patterson

HOUGHTON MIFFLIN COMPANY'S IMPORTANT FALL PUBLICATIONS

THE LIFE AND LETTERS OF JOHN HAY

By WILLIAM ROSCOE THAYER. "Easily the outstanding biography of the time and a worthy estimate of one of our great statesmen."—*Boston Transcript.*

"A work that fills a long-felt want, and is, in its diplomatic references, of direct interest in the present crisis of the world's affairs."—*N. Y. Tribune.* 2 *vols. Fully illustrated.* $5.00 *net.*

LYMAN ABBOTT'S REMINISCENCES

The story of a wonderfully interesting career and a consummate panorama of the spiritual and intellectual development of America from 1835 to the present day. *Illustrated.* $3.50 *net.*

JOHN MUIR'S TRAVELS IN ALASKA

This account of the wonders of our Northern possessions is one of the most interesting of recent travel books, while as the crowning volume of Muir's works it will take and hold a permanent place in American literature. *Fully illustrated.* $2.50 *net.*

THE OLD TESTAMENT IN THE LIGHT OF TODAY

By WILLIAM FREDERIC BADÈ. A new and profoundly interesting interpretation of the development of the moral sense as shown in the Old Testament. Laymen and scholars will alike find this notable book most stimulating. $1.75 *net.*

THE FALL OF TSINGTAU

By JEFFERSON JONES. A graphic account of military operations in the Far East by the sole American journalist who accompanied the Japanese expedition. *Illustrated.* $1.75 *net.*

A HILLTOP ON THE MARNE

By MILDRED ALDRICH. These letters, written by a Boston woman who was living on the "hilltop" at the time of the battle on the Marne, and who stayed there throughout the titanic struggle, make a book of unique interest. *Illustrations and maps.* $1.25 *net.*

LETTERS ON AN ELK HUNT

By ELINORE PRUITT STEWART. As fascinating as "The Letters of a Woman Homesteader" by the same author. "'The human document' form of literature has nowhere else attained such sanity, such clarity, such richness of simplicity."—*St. Louis Republic.* *Frontispiece.* $1.00 *net.*

AMERICA AT WORK

By JOSEPH HUSBAND. Brilliant sketches of typical American industries—the telephone exchange, the steel smelter, the grain elevator, the stock yard, etc. *Illustrated.* $1.00 *net.*

THE SONG OF THE LARK

By WILLA S. CATHER. The story of a prima donna's life from childhood on a Western ranch to international fame. "A distinct improvement on her previous novels, 'O Pioneers' and 'Alexander's Bridge.'"—*N. Y. Herald,* $1.40 *net.*

Pocono Manor

OPEN ALL THE YEAR

(Pocono Summit Station, D. L. & W. R. R.)

That belated vacation,—take it among the hills and streams at Pocono Manor.

That short Fall or Winter rest,—try a fortnight in retreat, on that 800-acre tract with the "Quakers at the Manor," comfort without ostentation. Golf, tennis and garage, no bar or dancing.

J. W. HURLEY, Manager

but the consistency of viewpoint, that of a man diseased in mind and body, is rather remarkable. But in piling horror on horror Mr. London overshoots his mark and numbs the mind into disbelief.

As to those books in lighter vein, a fresh breeze seems to have cleared the air and the inrush of fall novels carries with it an unusual zest. Even Rex Beach has fled the vitiated atmosphere in which he dashed off that tawdry thing, "The Auction Block," and has drawn a breath of fresh air on the Texan border. A compromising situation in the first ten pages of *Heart of the Sunset*, a kidnapping in the last and one can count on sufficient hot-headed adventure to keep the story moving briskly.

Close upon his heels follow the Williamsons in *Secret History*, only lighting upon that hornet's nest in a characteristic flight of adventure, which whirls this time thru England, America and Belgium. A new story by those inexhaustible authors means merely another varied costume on the same dummy, one which, however, proves equal to the demand.

Gouverneur Morris was apparently satiated with rural delights in his last extravaganza, "The Seven Darlings," and comes back to Broadway with *When My Ship Comes In*, yet another of those tales of children of nature who have only to step before the footlights to find themselves famous. However, Silver Sands is sufficiently off-type to be interesting, tho as a study of temperament, Willa S. Cather's *The Song of the Lark* is a much finer piece of work. The author traces in an unusual fashion not only the evolution of the small-town musical prodigy, but the struggle of inborn passion to break thru the racial stolidity which was at once her greatest hindrance and her greatest asset.

Jean of the Lazy A—artist—didn't need to evolve. She was a movie find and knew a "punch" by instinct. When movie sophistication meets the sophistication of the wild west, B. M. Bower's story is decidedly entertaining. But Arthur Stringer's *Prairie Wife* is the most gleeful soul that ever grappled with the rigors of ranch life, and so true-blue thru it all that one can revel in her irrepressible flippancies with a clear conscience. The story tells itself in a sort of safety-valve diary in which that city-bred bit of femininity alternately chuckles and wails over her growing pains in the big prairie. However, the prairie, while harsh, is hardly as stimulating soil for transplanting as that of an orphanage with 113 checked gingham orphans, and Sallie MacBride had been a rather carefully nurtured flower, too, before she found herself in charge of the John Grier Home of "Daddy-Long-Legs" fame. Her letters to Judy fairly bubble with humor in spite of a few thorns in the flesh, such as the dour Scotch doctor, *Dear Enemy*, and a large family of mischievous imps, and did they not have to bother with a plot they would be better yet.

Really wise authors now-a-days are aware that maidens to be interesting as well as modern must be independent, even tho they repent of their folly before the story's end. But Gordon Arthur Smith is not very convincing when he tempers the vivid, brilliant creature in *The Crown of Life* into a woman to whom life becomes at last merely a "pleasant pastime." Apparently he simply did not know how to develop her along the splendid lines he had begun, and more's the pity for spoiling so good a book. Sarah Warder MacConnell, however, in *Why Theodora*, leaves one with no peaceful vistas ahead. Her modern maid wanted hard work and plenty of it, and while she chose the old career of matrimony it promised to satisfy these longings beyond measure. So Theodora, while less interesting, is also less irritating.

Samuel Hopkins Adams joins the throng of entertainers with a merry ship-board romance of "Daddleskink Smith," who,

"While the porpoises porped
And the passengers torped,"

embarked upon his hectic wooing of *Little Miss Grouch*, with all the necessary appendages of Meddlesome Busy-Body, Irate Parent and Hot Pursuit. But Little Miss Grouch really had a very mild thrill in her self-kidnapping compared to the fair lady of Rafael Sabatini's *Sea Hawk*. She was carried off upon the high seas by a bona fide pirate, the boldest of bold bad banditti, who was once an upright Cornish gentleman and her lover. There is even more of that delightful old-time flavor in Justin McCarthy's new book—an odd blending of whimsy and adventure. *The Glorious Rascal* is none other than François Villon, that curious little man in "If I Were King," and the story of his checkered youth is as strange and appealing as one would expect. There are days at the court at Anjou, and at the university at Paris, swift venturesome days, told of in a most picturesque manner.

Into the midst of this whirl of stirring tales come three leisurely books, the most delightful of which is *Around Old Chester*. Margaret Deland's affection for her quaint friends is infectious and whenever she goes back to her native heath, one settles down for a comfortable, gossipy chat, even tho stories be a bit uneven, and not all of the force of "The Harvest of Fear" and "The Third Volume."

E. Œ. Somerville and Martin Ross have a new book of Irish stories, *In Mr. Knox's Country*, unusually choice, full of color, and interspersed with Miss Somerville's unique sketches. But one cannot afford to be leisurely when one lacks the capacity to create living characters and Ethel Sidgwick's dialog in *Duke Jones*, tho undeniably clever, is a nebulous thing, hanging in mid-air, with but little relation to the mouthpieces of her witticisms.

Aladore, by Henry Newbolt. E. P. Dutton & Co. $1.50. *God's Man*, by George Bronson Howard. Indianapolis: Bobbs-Merrill Co. *The Star-Rover*, by Jack London. The Macmillan Co. $1.50. *Heart of the Sunset*, by Rex Beach. Harper & Bros. $1.35. *Secret History*, by C. N. and A. M. Williamson. Doubleday, Page

SOME SCRIBNER BOOKS

HEART OF EUROPE
By RALPH ADAMS CRAM

Nothing could be a more timely or valuable contribution to the knowledge of what the great war means than this book. The description of such cities as Liege, Louvain, Malines, Rheims, Laon, Soissons, and Namur, which have been victims, of Amiens, of Bruges, Ghent, Antwerp, and Brussels, which have been endangered, is eloquent far beyond the mere marshalling of facts and pictures; it is not possible to read it without a thrill of deepest sympathy with Mr. Cram's love of what he describes and his sense of its loss or peril.

32 illustrations and photogravure frontispiece. $2.50 net

The Fountains of Papal Rome
By Mrs. Charles MacVeagh

One of the most characteristic features of the Eternal City is the quantity of magnificent fountains served by the exceptionally abundant water-supply. Of papal Rome, particularly, these monuments may almost be said to summarize the story. Mrs. MacVeagh has treated them in this sense as well as describing them with artistic sympathy. Each one is adjacent to some monument of public or private character, next some palace, or situated in some piazza, and each is the nucleus of a wealth of historical associations as well as an object of sculptural and architectural interest.

Illustrated by Rudolph Ruzicka. $2.50 net.

French Memories of Eighteenth Century America
By Charles H. Sherrill

An extremely vivid, lively, and instructive presentation of a most interesting period of our history, based upon the memoirs, and other forms of recorded observation and commentary of those French men and women who visited this country between 1775 and 1800—many of them to assist in our war for liberty. The author procured a large part of his material through the courtesy of the French Government, which allowed him to search the archives of several departments—Foreign Affairs, Marine, Colonies, etc.—and to this he has added selected bits from more than fifty memoirs.

With illustrations from paintings and engravings. $2.00 net.

The Fighting Cheyennes
By George Bird Grinnell

It would be hard to find a book so full of action, adventure, and stratagem or of heroism and self-sacrifice as this first full history of a great and typical tribe by one of the first living authorities on the American Indian. The relations, struggles, and wars of the Cheyennes have involved, at one time or another, not only most of the other Western Indians but the whites as well in many of their most famous campaigns—those of Miles, Crook, Custer, etc. It will be surprising if it does not become a classic in its literature.

With maps. $3.50 net.

Constantinople Old and New
By H. G. Dwight

"The work has been a labor of love—Constantinople is the author's birthplace. He knows it as home, and the touch of affection appears on every page. Life high and low, the hut and the palace, the marts, the water-front, the retired nooks float gently within our ken under the author's guidance, and the story of the 'glory of the East' unfolds gently, informingly, seductively, but effectively. One can almost say, after reading the book, I know Constantinople. . . . Few books of the kind will prove more satisfying to the mind that would inhale Eastern aroma or the eye that delights in knowing things as they are."—*Literary Digest.*

A New Volume by James Whitcomb Riley

In the Famous Illustrated Deer Creek Edition

RILEY SONGS OF FRIENDSHIP

In answer to an insistent demand, a new volume has been added to the immensely popular Deer Creek collection of Riley verse, containing the poems devoted to the celebration of friendship. Old times, old friends—how James Whitcomb Riley loves them and loves to sing of them! When he comes back to them after other, perhaps more ambitious flights, we feel he is striking his truest note. Half a hundred poems here—including a number of old favorites—voice in homely fashion the poet's greetings, and glorify the ties that everywhere bind kindly human hearts together. Young at heart, we enter here with Riley into the happy kingdom of the days that were.

Tales of Space and Time

The Great War has enormously stimulated the production of studies of diplomacy, and laymen who would have been unable two years ago to tell an ultimatum from a sphere of influence are now as well informed on all matters of international polity as diplomatic secrecy will permit. *The Secret Memoirs of Count Tadasu Hayashi*, with a lengthy characterization of the Count by A. M. Pooley, is the story of the Anglo-Japanese alliance told by the Japanese statesman who did the most to accomplish it. The book reveals an insight, a lucidity and an aptitude for *Weltpolitik* which might well make the oldest chancelleries in Europe look to their laurels. But the war in Manchuria is, of course, very modern history, however long ago it may seem in view of the crowded years which have passed since then. Many historians of far remoter events cannot forbear to use their material to illustrate the present. The account of *Frederick the Great and His Seven Years War*, by Ronald Scott Hall, draws parallels between Prussian strategy in the eighteenth century and Prussian strategy today, and insists that victory, now as then, depends less upon numbers, organization and equipment than upon a mastery of the geometry of war. This thesis is supported by copious extracts from Frederick's own account of his campaign. *Attila and the Huns*, by Edward Hutton, is a very readable, if not very critical, account of the little we know of those warlike nomads from the east. The author believes that "the Hun and the Prussian have much in common even racially" and makes a number of far-fetched comparisons between the two peoples, such as paralleling the Hunnish custom of scarring the face to prevent the beard from growing with the fact that "the Prussian student is even to-day famous for the scars on his face inflicted in the duels at the Universities." A valuable appendix gives the Latin text of the original accounts of the Huns.

If the current of interest in the war has somewhat deflected general history from its normal channels it has not markedly diminished the number of economic studies and compilations of source materials which are the sure foundation stones upon which general history may build. The first volume of E. Lipson's *The Economic History of England*, covering the mediæval period, is a very complete and detailed

Don't Be One of Life's Wooden Soldiers—With Your Foot Raised But Never Marching

Make Your Life Efficient!

Don't take your life for granted. You may be a round peg in a square hole. Why not study yourself at close range? You seek instruction in everything else but the most important of all studies, LIFE. Do you realize that you have unused means at your command that will help you preserve Health and Physical Tone, Increase Personal Resourcefulness, Social Equipment, Earning Power and Happiness?

Mr. Edward Earle Purinton, Director of The Independent's Efficiency Service and one of the greatest personal efficiency experts in the country, has written this wonderful book, which points the shortest way in the shortest time to the happy and efficient life.

EFFICIENT LIVING

By EDWARD EARLE PURINTON

Author of "The Triumph Of The Man Who Acts"

"Will power is the taproot of Efficiency."—*Dr. Charles W. Eliot, President Emeritus of Harvard University.*

"Efficiency is the hope of democracy."—*Louis D. Brandeis, Special Counsel of Interstate Commerce Commission.*

"Efficiency like courage and cleanliness is an attribute of the soul."—*Harrington Emerson, Efficiency Expert.*

"The first seven factors in Efficiency are: Health—Character — Education — Ambition — Equipment — Environment and Reward."—*Judge Elbert Gary, Chairman United States Steel Corporation.*

"Efficiency is first of all thoughtfulness and getting the best results with the best methods."—*William R. Willcox, President of The Efficiency Society.*

This book is intensely practical and inspirational in its application to everyday problems of self analysis and self expression. It aims to teach everyone, young or old, the science of self management.

Based on Mr. Purinton's personal study of over five hundred Efficiency methods and systems in America and Europe, it is essentially a book for the busy man.

After spending fourteen years learning how to increase human health, energy, productiveness and happiness, he is putting into this book the result of his rich experience.

Mr. Purinton is widely known as the director of The Independent's Efficiency Service, and his "Triumph of the Man Who Acts" had the marvelous distribution of over 700,000 copies during the first few months of publication.

account of the age with which it deals. One aspect of the economic progress of England is more fully developed in *The Evolution of the English Corn Market from the Twelfth to the Eighteenth Century*, by Dr. Norman Scott Gras, a careful and much documented study. Charles Gross's scholarly bibliography of the *Sources and Literature of English History from the Earliest Times to About 1485* has been revised and enlarged for a second edition. *Source Problems in English History*, by Professors Albert Beebe White and Wallace Notestein of Minnesota University, consists of eight selected problems in English history with the text of the more important original documents bearing on the problem given in each case. The book is well adapted for college use as an introduction to the method of historical research. *Readings in American History*, by Professor David Saville Muzzey of Columbia, is not a problem series but a source book to be used in connection with the ordinary history text-book, altho the selections chosen are so numerous as to form a fairly complete historical narrative in themselves. In the field of American history we may add *New York's Part in History*, by Sherman Williams, which is rather a string of historical essays and sketches than a continuous history. The author complains in his preface that the history of Massachusetts has been allowed to overshadow the no less important past of New York State, and he has set himself to readjust the balance. Another work of fragmentary character is *High Lights of the French Revolution*, from the versatile pen of Hilaire Belloc. The title could not have been better chosen for it exactly describes the book. Certain incidents, such as the French victory at Valmy, or certain individuals, such as the Marquis de Lafayette, are selected for discussion and the author at once throws upon them the full illumination of his lucid, vivid and dramatic style.

The History of the Norwegian People, in two portly volumes by Knut Gjerset, covers every phase of the national life of Norway from the earlier stone age to the present. The work was evidently a labor of love, for the author writes with a conscious pride in his subject matter which has helped him in chronicling the dryest details of noble faction or conflicts for the throne. So far as the book has a purpose it is to make the Norwegian American familiar with the glorious history of the land of his forefathers, and so with entire appropriateness the last chapter is devoted to the triumphs of the Norwegian emigrant in the life of our common country. *The Normans in European History*, by Professor Charles Homer Haskins, deals primarily with the position of the Duchy of Normandy in medieval Europe. The author believes that modern France and modern England were alike made possible by the energy and the administrative talent of the Normans, whose kings ruled over the best organized of medieval states. Professor Haskins also devotes

two chapters to the Norman rule in Mediterranean lands. Finland, the outpost of civilization and liberty in northeastern Europe, has attracted the attention of many writers, more particularly since the beginning of the popular struggle against Russification. *Finland and the Finns*, by Arthur Reade, lecturer in the University of Helsingfors, is the best book on the country because it is comprehensive, well-informed and thoroly up to date. The author treats the Finnish nation not as an old curiosity shop, but as a twentieth century commonwealth with the Scandinavian type of civilization, and he devotes more attention to its contemporary literature than to the well-known *Kalavala*.

The Secret Memoirs of Count Tadasu Hayashi, edited by A. M. Pooley. G. P. Putnam's Sons. $2.50. *Frederick the Great and His Seven Years War*, by Ronald Scott Hall. E. P. Dutton & Co. $1.50. *Attila and the Huns*, by Edward Hutton. E. P. Dutton & Co. $2. *The Economic History of England*, Vol. I, by E. Lipson. The Macmillan Co. $2.50. *The Evolution of the English Corn Market from the Twelfth to the Eighteenth Century*, by Norman Scott Brien Gras. Harvard University Press. $2.50. *Sources and Literature of English History from the Earliest Times to about 1485*, by Charles Gross. Longmans, Green & Co. $6. *Source Problems in English History*, by Prof. Albert Beebe White and Prof. Wallace Notestein. Harper & Bros. $1.30. *Readings in American History*, by Prof. David Saville Muzzey. Boston: Ginn & Co. $1.50. *New York's Part in History*, by Sherman Williams. D. Appleton & Co. $2.50. *High Lights of the French Revolution*, by Hilaire Belloc. The Century Co. $3. *History of the Norwegian People*, 2 vols., by Prof. Knut Gjerset. The Macmillan Co. $8. *The Normans in European History*, by Prof. Charles H. Haskins. Houghton Mifflin Co. $2. *Finland and the Finns*, by Arthur Reade. New York: Dodd, Mead & Co. $3.

Literary Biography and Criticism

In *The Greatest of Literary Problems*, a large, finely illustrated volume, James Phinney Baxter has gathered all the data and arguments in the Shakespeare-Bacon controversy, making out so good a case for Bacon as may be made perhaps until psychical research becomes practically useful. Meanwhile scholars and common folk alike go on using the name Shakespeare as a convenient handle. But something greater than Mr. Shaw has turned attention this year and neither the poet nor the philosopher, be he one or two, has had much notice. *Disguise Plots in the Elizabethan Drama* is a learned study of a merry theme, by Victor Oscar Freeburg of Columbia, and *James Shirley, Dramatist*, is a thoro treatment of the little known life and the writings of "the last of the Elizabethans, the prophet of the Restoration," by Professor Nason of the New York University.

Not every day does one find a book written simply because the author wished to write it, but there is no doubt about Albert Mordell and his *Dante and Other Waning Classics*, for there is no such run on any of the classics at present as to force even the most eager reformer to put himself out. But Mr. Mordell is an enthusiast, or an iconoclast, which is the same thing turned about. He hates Dante for his theology, his astronomy, his politics, his unpleasant Hell. It is theology that bothers

Gift Books for Thoughtful Readers

Isles of Spice and Palm

By A. HYATT VERRILL, Author of "Porto Rico Past and Present," etc.

[illegible] is an authoritative and complete book dealing with the most attractive and least known of the West Indies, the Lesser Antilles. It is rather a Baedeker and a guide book, but it fulfills the purpose of both and contains just the information the visitor to the islands may desire on climate, descriptions of the people, customs, industries, etc.

Profusely illustrated from photographs. $4.00 *net.*

Forty Years in Constantinople

The Recollections of SIR EDWIN PEARS: 1873-1915

Unquestionably one of the most important books of the year. A history of modern Constantinople, its people and events, by the greatest living English authority.

With numerous illustrations. $4.00 *net.*

Through Central Africa From Coast to Coast

By JAMES BARNES, Author of "The Great War Trek," etc.

A graphic description of an African hunting expedition made by the author and a companion as photographer, following the same trail taken by Stanley on the Emin Pasha Relief Expedition. The illustrations are remarkably interesting and show specimens of nearly every kind of life found in that region, truthfully and unstaged.

Profusely illustrated. $4.00 *net.*

In Times Like These

By NELLIE L. McCLUNG

The author is one of Canada's most prominent writers, and most distinguished leaders in the cause for women. In response to repeated requests, she has in this volume set down her opinions on many of the vital topics of the day, offering strong protests against liquor traffic, white slave trade, ignorance, luxury, laziness and indifference. It is a vigorous, timely book which fair-minded men and women will strongly endorse.

LITTLE, BROWN & CO., Publishers Boston, Mass.

Mr. Mordell right along. Most of us skip it and enjoy the rest, but not he. Milton is irritatingly behind Darwin. Thomas à Kempis and Pascal have the mark of the Mystic. Bunyan is illogical. St. Augustine is directly responsible for the emotionalism of the Salvation Army. One is tempted to disturb long gathering dust and see if the Mighty really be so pernicious.

Paul Elmer More is not an iconoclast, as is proved by his earnest and convincing defense of training in the classics set forth in "Academic Leadership," one of the essays in his volume, *Aristocracy and Justice*. Mr. More is a man of convictions, one who thinks long and clearly before he writes. Scholarly and practical papers are these, and it is well that such arraignments of our present over-sentimental humanitarian theories as are to be found in "Justice," "Natural Aristocracy," "Property and Law" and "The New Morality" should reach a wider public than was found for them as magazine articles, for whether one agrees with them or not, they point out certain tendencies and weaknesses it were not well to ignore.

One of the most interesting of the varied papers in Arthur Waugh's pleasant volume, *Reticence in Literature*, is that on George Gissing. The sympathetic analysis of the influence of Gissing's bitter poverty upon his work and the comparison of his picture of the poor of London with that drawn by Dickens is suggestive of wider application.

Carlyle and How to Know Him and *Browning and How to Know Him* are two volumes in a series now being published by Bobbs-Merrill. The plan of these books is excellent, a short biographic sketch with emphasis on influences rather than on incidents, on personality rather than on action, followed by an analysis of the writings with the main object of making plain the writer's philosophy and teaching. Bliss Perry's study of Carlyle is enlightening and his enthusiasm carries the reader with him. The illustrative extracts will open the eyes of those to whom Carlyle is little more than a great name, to somewhat of his originality, power and picturesque dramatic quality. Four sentences in Professor Perry's closing pages explain not only this book but the series. "How many Americans may fairly be said to know the entire work of any one of the great Victorians? The drift of the age is against such robust and masculine effort to grapple with the total output of any first rate mind. This book is not a substitute for a close knowledge of Thomas Carlyle. Yet it may help some readers to try to climb the mountain for themselves." Nothing that Professor Phelps writes lacks interest and he has woven an attractive explanatory study about some fifty of Browning's poems, analysing therein the poet's convictions, his tastes, his methods. As an introduction at once popular and understanding this book could hardly be bettered.

An astounding book is *My Chief*

hood, the autobiography of Maxim Gorky to his seventeenth year. It makes one hope that realism is a relative term and that "Old Chester Tales" are as truly realism for the region they depict as are many of the dreary pictures of life by Russian novelists. Here is what is said to be an accurate picture of a Russian family, which for sordidness, unrelieved by one touch of beauty, nobility, reserve even, it would be hard to equal. Is it possible that that other account of a writer's childhood, Loti's "Roman d'un enfant," was written on the same planet? Even the grandmother, the one tender, human character, imaginative, pious, tipsy, is but a piteous creature dragged down to the level of her sons and husband. Not political reform so much as John Wesley is the need of Russia if such homes be common.

The Greatest of Literary Problems, by J. P. Baxter. Houghton, Mifflin Co. $5. *Disguise Plots in the Elizabethan Drama*, by V. O. Freeburg. Columbia University Press. $1.50. *James Shirley, Dramatist*, by A. H. Nason. University Heights. *Dante and Other Waning Classics*, by Albert Mordell. Philadelphia: Acropolis Publishing Co. *Aristocracy and Justice*, by Paul Elmer More. Houghton, Mifflin & Co. $1.25 *Reticence in Literature*, by Albert Waugh. E. P. Dutton & Co. $1.25. *Carlyle and How to Know Him*, by Bliss Perry. *Browning and How to Know Him*, by William Lyon Phelps. Indianapolis: Bobbs-Merrill Co. $1.50 each. *My Childhood*, by Maxim Gorky. The Century Co. $2.

Religion, Theoretic and Practical

It was to be expected that the Great War would noticeably reduce the output of the more vital works on theology and religion. Many of the most productive writers laboring in these fields abroad have been drafted from the library and study to the council boards and military service of the state, or thrown violently into a whirling struggle, a moral and intellectual turmoil which makes the old lines of investigation for the time impossible, and even absurd.

Altho most of the important contributions to religious literature are therefore coming from our American writers, there have been some recent volumes of great worth from English pens, projected or partially written before the war began. A book of admirable quality and great value has been made by J. N. Farquhar out of his Lamson Lectures for 1913. These lectures on *Modern Religious Movements in India* have been enlarged and enriched with fresh material, and the volume gives a compact, interesting and illuminating account of the religious awakening of that land of mysticism and caste. The relation of Indian religious movements to nationalism and social reform is discussed with the knowledge and insight which come from long years of residence and travel among all classes of the Indian people.

A small volume of sermons by the late Professor Driver has been posthumously published in accordance with the author's request. It was a happy thought to give the collection the title of one of the sermons, *The Ideals of the Prophets*, both because most of the

ATLANTIC MUTUAL INSURANCE CO.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries.

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of	$27,964,578,109.00
Received premiums thereon to the extent of	287,324,800.99
Paid losses during that period	143,820,874.99
Issued certificates of profits to dealers	90,801,110.00
Of which there have been redeemed	83,811,450.00
Leaving outstanding at present time	6,989,660.00
Interest paid on certificates amounts to	22,694.87
On December 31, 1914, the assets of the company amounted to	14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

Doran Books of Great Significance

Balfour and an Interpretation of Life

THEISM AND HUMANISM
The Rt. Hon. Arthur James Balfour, F.R.S.
The first philosophical work of first rank in several years—a book that belongs with the best and most pertinently human in William James, Royce, Bergson, Eucken. Mr. Balfour stands equally high as statesman and philosopher, and in THEISM AND HUMANISM he treats definitively the naturalistic interpretation of life. 8vo. Net $1.75

Canada and the United States

DEMOCRACY AND THE NATIONS
Dr. James A. Macdonald
Not only does this great spokesman for Canada to the United States, editor of the *Toronto Globe*, suggest to the world how powerful a lesson lies in the unarmed friendship of the United States and Canada, but he traces the origin of the Anglo-Saxon Ideal, and the conferring of a Crown of Lincoln-like dignity and power on the timid and disorganized Crowd. 12mo. Net $1.35

Norman Angell and the American Foreign Policy

THE WORLD'S HIGHWAY *Norman Angell*
Angell's is a name to charm with. To statesmen, he means a practical new ideal of international relations; to those who love peace he means the leader of all forces opposed to blundering nationalism; to twenty nations he means the author of "The Great Illusion." Now he has turned his great brain to America's service and written an introduction to the study of American foreign policy, in all its aspects. A book necessary for every thinking American. 12mo. Net $1.50

Arnold Bennett

OVER THERE *Scenes of War on the Western Front With Drawings by Walter Hale* *Arnold Bennett*
The same wonderful power of observation which has made him a master novelist, Mr. Bennett has devoted to the war, which he has seen first-hand, frequently under fire, in the company of French soldiers. 12mo. Net $1.25

William Winter

VAGRANT MEMORIES *William Winter*
Further personal recollections of the Nestor of American letters; mellow pictures of the days of greenroom wit, of Irving, Booth, Rehan and their peers. Richly illustrated. 8vo. Net $3.00

Mrs. T.P. O'Connor

DOG STARS *Illustrated in color by Will Rannells* *Mrs. T.P. O'Connor*
Very human, very affecting, these honest pictures of her dog friends and their homes in London and America, by the charming wife of the Irish leader. Without fictionizing, she yet makes them live, for other lovers of dogs. 8vo. Net $1.50

Mary Roberts Rinehart

KINGS, QUEENS AND PAWNS
Mary Roberts Rinehart
A woman goes to war, a famous woman novelist with woman's sensitiveness and sympathy, and brings back its pity and its curious little humors. 12mo. Net $1.50

Hymnology

THE ENGLISH HYMN *Louis F. Benson, D.D.*
Supersedes every other book on hymnology, both as history and as possessing practical suggestions. 8vo. Net $3.50

J'Accuse

I ACCUSE (J'Accuse) *By a German*
Easily the most famous book on the war, because of its revelations of Germany's self hypnotization, by a high-ranking and patriotic German. 12mo. Net $1.50

Superjournalism

NATIONAL FLOODMARKS
Observations of Life from COLLIER'S
The best and most permanent of *Collier's* famous editorials—in them a vision of American life and destiny as it is today 12mo. Net $1.50

material is properly characterized by this caption and because the author was a noble exponent of prophetic teaching thruout his career as a writer and lecturer. While his work is never impassioned, his expositions are sound and clear, his historical perspective true and his conception of the prophetic aim and utterance highminded and reverent.

On the same high plane of scholarship and of even greater interest is the splendid study of *The Social Institutions and Ideals of the Bible*, by Professor Soares of the University of Chicago. The volume covers in a most effective way the domestic, economic, political and religious institutions, tracing their origin and development from the primitive life of Israel thru the varied history of that people, culminating with the teachings of Jesus. The book is adapted for both classroom work and reference and will furnish the general reader with valuable criteria for estimating the social movements and aspirations of the present time.

Naturally the Great War has stirred American writers to consider religious subjects largely in the light of this great catastrophe. Professor Coffin has in this spirit furnished a fresh interpretation of *The Ten Commandments* in which their larger social significance and application is earnestly urged. Professor Felix Adler, in *The World Crisis and Its Meaning*, attacks the question of the Great War directly and gives a searching analysis of the defects in civilization which have made it possible. Militarism, he declares, is not the cause, but only the instrument of the unethical industrial organization, and of unchastened, unethicized nationalism. We are witnessing a contest between types of civilization, and the world is out of joint not only in its moral conduct, but in its moral concepts. Humanity, he believes, is in the birth throes of new ethical ideals which will concern nations as well as individuals and insist on the value of difference as well as likeness in promoting human brotherhood and tolerating national types.

One of the most profound and constructive books of the year is Dr. Josiah Strong's analysis and vision of *The New World Religion*. The author's comprehension of historical and social movements, his breadth of human sympathy, and firm grasp of the essentials of Christianity as a social gospel aid him in projecting the familiar terms of religion into the field of world wide relationships where they take on new meaning and appeal to the highest aspirations kindling unwonted enthusiasm for participation in the great world task.

EFFICIENCY QUESTION BOX

CONDUCTED BY

EDWARD EARLE PURINTON

DIRECTOR OF THE

INDEPENDENT EFFICIENCY SERVICE

176. Mr. C. L. Y., Vermont. "In my search for health I have come across a variety of breathing machines, whose makers guarantee them to increase my lung capacity. As I am a shallow breather, and most of our family have weak lungs, the idea of a lung-developer appeals very greatly. But I want to be sure of its safety, before purchasing and using such a device. Please give your opinion."

We do not care much for mechanical breathing-instruments. When used vehemently, as they often are, they tend to strain the vascular tissue and may even rupture a blood-vessel. Their chief benefit is in focusing attention on the lungs, and offering an attractive method for their systematic cultivation. Our advice, however, would be not of condemnation, but merely of caution.

A good way to increase lung power is to run a few blocks every night, starting slowly with 3 or 4 blocks, and adding a block each night up to, say, 10 or 12; then adding speed, gradually and regularly. Swimming, rowing, skating, mountain climbing, and tennis are valuable means to enlarged lung capacity.

---

177. Mr. E. H. B., Tennessee. "I am a beginner in the field of literary endeavor. Unprejudiced critics admit I have the intelligence and thought, but I lack any degree of control over my own efforts to create new thought. How can I transform my mind from a kind of spasmodic, 'wind-mill' action to that of the steady, dependable dynamo?"

General information of value may be found in the magazine *The Editor*, of Ridgewood, New Jersey, and in Dr. O. S. Marden's book "Hints for Young Writers." Your problem, that of harnessing your Pegasus into a plow-horse routine, is one of the hardest in all the literary field. But it can be done.

Force yourself to write for a certain number of hours each day—the same hours every day, with no interruption allowed, even if no thoughts come. Usually the early morning hours are best, with no breakfast, or a liquid breakfast, preceding. Go to the woods, or lock yourself in your room, away from everybody. Light exercise and a cold bath may stimulate your brain for better action. Get the note-book habit, jotting down thoughts and observations wherever you are, then working them over in your daily writing-period. Occasionally, select a subject and write yourself out on it, even if you skip a male or two while exhausting your mental reserves. Above all, write about the things of which you know most, and on which you feel deeply. The true message writes itself. Look in your heart for your message—and you will write with a power no man can give, nor any take away.

---

178. Miss A. C. J., Boston. "What is the most hygienic light for a brain-worker forced to use the eyes a great deal at night? I have a choice of gas, denatured alcohol, acetylene, or electricity; and would like to know which is best, in planning our new house."

Make it electricity—safest, cleanest, brightest, most economical in the end. You can buy for $2 and upwards a most convenient and effective portable electric lamp, with shade and clamp attachments for your desk or reading table.

---

179. Mr. G. S. P., New York City. "We used to live on a farm, where I had vigorous daily exercize, and was healthy and happy. Now being engaged in sedentary work, I find myself sub-

SECOND EDITION

Here the hunting has been done for you. It will keep you *abreast of the times.* It *will answer* the questions arising in your work, your play, your reading and in conversation. Its information is arranged *alphabetically*, so you can *quickly* find what you want to know. The knowledge of the ancients and the latest facts of the day are thus easily accessible. The use of nitrogen from the air for fertilizing fields, the American solution of the dye question, and all other topics, late and otherwise, receive adequate treatment in the logical place for them to be. The saving of time effected is material. The articles are concise, interesting and in language you can understand.

This Encyclopædia is Being Written and Published *Now*

It contains 30,000 more articles than any other standard encyclopædia, due to its comprehensive scope and to the vast amount of new facts incorporated.

It is the Latest Word of Authority

on every subject. The editing of the Second Edition is by Frank Moore Colby and Talcott Williams, American scholars of wide cyclopædic experience. It is being published by Dodd, Mead & Co., New York, publishers of 76 years' experience and makers of encyclopædias for over 30 years. Foremost authorities all over the world have gathered and contributed the information it contains. Illustrations, maps, typography, paper, printing and binding are exceptional, as befits the preeminence of the work.

Printed on Thin Durable Paper

The volumes are of convenient size for easy handling and are light in weight. The Special Library Edition is printed on regular book paper and bound in library buckram.

THE ANGELUS PLAYER PIANO

"The Angelus Player Piano offers the possibility of producing any desired shading in expression, dynamics, and color of tone.

FRITZ KREISLER.

"There are so many wonders in the Angelus that one can only speak of the ensemble effect—it is perfect. The Phrasing Lever is marvelous, almost beyond belief, in its control of the tempo; the Melodant brings out the melody exquisitely; while the touch and tone coloring are the height of artistry. *It is incomparable.*"

ANNA PAVLOWA.

"My strongest impression of the Angelus is its perfect reflection of the personality of the performer. Through the Phrasing Lever, almost without conscious effort, you impart to the playing your own tempo nuances, while the Melodant automatically brings out the melody. I find the utmost freedom in giving to it just the degree of emphasis that I desire. It seems incredible that so much in the way of music as an art can be accomplished with so little effort."

EMMA TRENTINI.

THE endorsement of the ANGELUS by three artists of world-wide distinction—Vocalist, Violinist, Premier Danseuse—each one demanding from the instrument the highest artistic qualities of widely divergent character, and all finding them in the ANGELUS in the superlative degree, is conclusive proof of the supremacy of the ANGELUS as the world's artistic player.

ject to "colds," indigestion, skin trouble, etc., due, I believe, to lack of thoro perspiration. I cannot afford to spend a couple of dollars for a weekly massage and Turkish bath, and have no time for prolonged gymnastics. What do you suggest, to keep the pores open?"

You can buy for a few dollars a vapor bath cabinet, and take a perspiration-bath for a few cents' worth of alcohol, in your own home. Such a bath rightly employed—ask your doctor first—would approximate in 10 minutes the cleansing power of a two-hour period of ordinary outdoor exercize. Vapor bath cabinets may be had from any large drug-store, or a medical supply house.

---

180. Prof. D. H. N., Washington. "My friends ridicule me greatly for my absent-mindedness, and I know my work suffers thereby. Several of my pupils have the same trouble, are unable to focus on the subject in hand, but always seem to have their thoughts wandering elsewhere. Of course, their grades are poor in these studies. What is the cure for absent-mindedness?"

Present-heartedness. Our intellect follows our interest. And to concentrate on any subject, we must find or create some real interest in it. The creative minds of the world—inventors, composers, artists, even industrial magnates—are so absorbed in their ideals and ambitions that they *seem* "absent" to persons without ideals or ambitions. Laugh at the ridicule of your neighbors—it is more laughable than the object of it. But if your influence as a teacher is impaired, force yourself to concentrate on trivial details of everyday life, simply for the sake of mental control and the greater prestige that such control will give you among superficial observers. As for your scholars, find a way to hang every study in the doorway to their hearts. Never mind their brains—enlist their affections, emotions, ambitions, and show them how each study will lead to some goal of their desire. If it won't, it doesn't belong in the curriculum at all.

---

181. Mr. T. L., Tokio, Japan. "I have heard a great deal of your celebrated books on the scientific handling of the human machine, and would be greatly obliged if you would tell me where to secure these books. Their reputation is such as to warrant my asking your permission to have them translated into the language of this country. I would be glad to receive any information on Efficiency matters that you think would interest a young Japanese, and will distribute your books in quantities as soon as I hear from you."

Your interest, and request from your distant land, gratify us deeply. The Efficiency Press Syndicate, 2528 Woolworth Building, New York, is now preparing a special edition of my Efficiency booklets, and is also compiling a list of the best books on various phases of Personal Efficiency. Doubtless you can arrange with this Syndicate for the translation and distribution of the writings in question.

---

182. Miss M. I. R., Pennsylvania. "My efficiency is greatly lessened by a nervous condition which prevents me from obtaining [illegible] from fear of reputation [illegible] can you suggest a cure? I am a country school teacher, spending most of my spare time in social service and correspondence work. I appreciate the work you are doing, and am glad to take this opportunity to thank you for it."

Are you not attempting too much in the way of "organization service"? I would cut some of the moralizing effort to uplift the community, and take a long walk or horseback ride every other day. A half-hour of absolute silence and solitude should be spent each day in perfect relaxation—preferably in the early afternoon. Go to your room, lock your door, and refuse to be disturbed unless the house is on fire. Darken the windows, loosen your clothing, stretch out on the bed, and think of nothing for 30 minutes but how slowly and deeply and regularly you can breathe and how limp you can make your whole body. Practise on this, and you will be so much refreshed as to [illegible] hours of ordinary sleep. Annie Payson Call's book, "Power Through Repose," may help you; also the books on stress and mental control by Dr. Paul Dubois, and by Dr. [illegible].

The Market Place

GREAT REVIVAL IN THE STEEL INDUSTRY

For good and sufficient reasons the condition of our iron and steel industry is called a trade barometer. The demand in this industry has never been greater than it is now. Output has been growing rapidly during the last three or four months, and prices have been steadily rising. "Demand for pig iron and for the various lines of steel," says Judge Gary, chairman of the Steel Corporation, "is at the present time in excess of the producing capacity of the furnaces and mills of the United States. There is nothing to indicate that there will be a decrease of the demand for some time to come."

It has been estimated that 175,000 men have been added to the number of those employed. Companies are planning additions to their plants and offering bonuses to builders for fast work. This activity and expansion are not due wholly to the foreign orders for ammunition and other products of which steel is a large part. There is a revival of the demand for domestic consumption.

Our railroad companies have given large orders for rails and cars. It is estimated that the rail sales for the entire year will be 2,400,000 tons, against last year's 1,501,000. In 1914 the companies carefully restricted their purchases. But now a revival of their industry, with an increase of their net earnings, has driven them to the steel market. The number of their cars is not sufficient for the loads of grain, ammunition, auto trucks, etc., which they must carry. It is not an easy matter to fill all of their orders. When they call for locomotives there may be delay, because one great locomotive company is at work on $100,000,000 worth of European orders for munitions and another has contracts for $35,000,000 worth. These engagements are for work running thru the year 1916. We are making locomotives also for countries in South America and the West Indies because neither Germany nor Belgium can now underbid our manufacturers or supply such products at any price. Russia's orders here for rails have amounted to about 400,000 tons, and 641 locomotives have been ordered by foreign Governments since the beginning of the year.

There appears to be no warrant for a report recently published that the Allies resent the advance of our prices

How to Steady Your Nerves

Poise, self-control and business success are impossible unless you have steady nerves. And—steady nerves are impossible, unless you know how to take care of them. In his new book "Neurasthenia," Dr. John Harvey Kellogg tells you how to take care of your nerves naturally and scientifically, so you may have full control of yourself at all times. Dr. Kellogg has made a life study of the nerves and, as Superintendent of the Battle Creek Sanitarium for nearly forty years, he has had opportunity to observe, treat and prescribe for thousands of nervous cases. What Dr. Kellogg tells you in his book, therefore, is the result of experience. He deals with facts—*not theory*. Get Dr. Kellogg's book and study it with care. It will help you to greater capacity, poise, self-control and success. Over 300 pages, with many illustrations and full instructions for diet, exercise, rest and sleep. Price, cloth $2.—half morocco $4. Order today. You take no risk. If you are not entirely satisfied, return book at once for prompt refund. Address your order—

DIVIDENDS

NILES-BEMENT-POND COMPANY.
Preferred Dividend No. 65.

New York, November 3, 1915.

The Board of Directors of NILES-BEMENT-POND COMPANY has this day declared the regular quarterly dividend of ONE AND ONE-HALF PER CENT upon the PREFERRED STOCK of the Company, payable November 15, 1915.

The transfer books will close at 12 o'clock noon on November 6, 1915, and will reopen at 10 o'clock in the forenoon of November 16, 1915.

CHARLES L. CORNELL, Treasurer.

NILES-BEMENT-POND COMPANY.
Common Dividend No. 54.

New York, November 3, 1915.

The Board of Directors of NILES-BEMENT-POND COMPANY has this day declared a quarterly dividend of ONE AND ONE-HALF PER CENT upon the COMMON STOCK of the Company, payable December 30, 1915.

The transfer books will close at 12 o'clock noon on December 11, 1915, and will reopen at 10 o'clock in the forenoon of December 21, 1915.

CHARLES L. CORNELL, Treasurer.

The Board of Directors of The Vacuum Oil Company on November 4, 1915, declared a special interim dividend of three per cent. upon the Preferred Stock, and a quarterly dividend of one per cent. upon the Common Stock of the Company, both payable December 1, 1915, at the banking house of Wheeler, Lindley & Co., 59 Cedar St., New York City.

The Stock Transfer Books of the Company will be closed on November 11, 1915, at 3 P. M., and will remain closed until December 1, 1915, at 10 A. M.

HORACE E. RALPH, Secretary.

and are making great efforts to supply their needs at their own mills. Undoubtedly they are doing what they can in this direction, but Russia can do very little, and France is restrained by the hostile occupation of an essential part of her territory. The testimony of our manufacturers is that the Allies are willing to pay the prices and are anxious only about prompt deliveries. The demand persists, and there are at the present time foreign inquiries in our market for not less than 300,000 tons of steel. In the last few months the weekly advances have added about 35 per cent to the price of pig iron, and the gain for coke has been 100 per cent. In the wire industry, which enjoys the largest trade ever known, prices are from 20 to 30 per cent higher than those of a year ago. The average recent addition for several other steel products is in the neighborhood of 15 or 20 per cent. For some of them the best prices of 1912 have now been reached.

Stimulation of pig iron production has given to October the record-breaking output of 3,125,491 tons, following September's 2,852,501. We are now making pig iron at the annual rate of 37,500,000 tons. The rate has nearly been doubled since the beginning of the year.

The effect of this revival in the steel trade is shown by the reports of the great United States Steel Corporation. Before the recent quarterly meeting of the directors many expected that the dividend on the common stock would be restored. Mainly because of this expectation the price of the stock, which fell to 38 in February last, after the dividend had been discontinued, rose to 87½, the highest figures in five years. It was predicted that the quarter's net earnings would be at least $40,000,000, and possibly $45,000,000. The official report showed that they had been $38,718,644. No dividend was declared, but there have since been sales of the stock at 88⅜. Many think they foresee restoration of the dividend at the next quarterly meeting, for it is expected that the net earnings of the current quarter will exceed those of the quarter that ended with September.

The directors preferred to take a conservative course. In the year's first quarter the net earnings were not sufficient to pay the dividend on the preferred stock, and there were other deficits in 1914. These must be made good, with some allowance for a recent reduction of the sums usually set apart for depreciation. But the growth of earnings has been very encouraging. The quarterly net has risen this year from $12,467,000 in the first quarter and $27,950,000 in the second, to $38,718,000 in the third, and the monthly net from only $1,687,000 in January, and $3,638,000 in February, to $13,793,000 in September. In the three months of the recent quarter there was a steady advance, and it is quite probable that October's net was in the vicinity of $15,000,000. If the year's last quarter yields net profits of $10,

WILLIAM H. PORTER, *Banker*

EDWARD TOWNSEND

Pres. Importers and Traders Nat. Bank

Good men, whether experienced in life insurance or not, may make direct contracts with this Company for a limited territory if desired. Address for themselves, to agency to first year's commissions, a renewal interest in 10% of the premiums for the second year and a commission on all premiums paid by policyholders secured by them in renewal years. Apply to the Company at its Home Office, No. 277 Broadway, New York City.

Get the Saving Habit

The habit of saving has been the salvation of many a man. It increases his self-respect and makes him a more desirable member of society. It is now easier than ever before for the man of moderate means to accumulate a competence and to safeguard that he has accumulated. Such a man should be interested in the following statement issued by the Home Life Insurance Company of New York. This will show a simple method by which any man may be enabled from his own income gradually to secure for himself a competence, and also absolutely secure those dependent upon him.

HOME LIFE INSURANCE COMPANY

Geo. E. Ide, President

256 BROADWAY NEW YORK

DIVIDENDS

OFFICE OF INTERNATIONAL SILVER COMPANY

Meriden, Conn., November 10, 1915.

A dividend No. 31 of One Dollar Seventy-five Cents per share on the Preferred Stock of this Company has been declared payable December 1, 1915, to stockholders of record at the close of business on November 20, 1915. Checks will be mailed by the American Exchange National Bank, 128 Broadway, New York City.

GEORGE ROSEWELL, Secretary.

GENERAL DEVELOPMENT CO.

71 Broadway, New York, November 1, 1915.

At a meeting of the Board of Directors of the General Development Company held this day a dividend of thirty-five cents (35c) per share was declared on the Class A Common Stock of this Company, payable December 1, 1915, to stockholders of record at the close of business on November 20, 1915. Books will not close.

SAM A. LEWISOHN, Treasurer.

000,000 or more, the directors may feel that the payment of dividends on the common stock should be resumed. The Government has filed in the Supreme Court an appeal from the decision of the Federal Court in New Jersey. That court, in the Government's suit under the Anti-Trust law, declined to order a dissolution of the Corporation. The decision was an acquittal. It is not yet known when arguments on the appeal will be made.

RAILROAD GAINS

Notable improvement of the business and earnings of our railroads has been shown in the last two or three months. The effect of this is seen in Stock Exchange transactions. Week before last the prices of leading active railroad shares rose, and the net gains were from 1¾ to 6½ points. There were additional advances last week, and the general reaction on Friday left prices fractionally higher than they had been on the preceding Saturday.

All reports indicate that traffic thruout the West and on roads from the West to New York was so great in October that new high records were made. The growth was noticeable from the beginning of September, and it has been due to an increase of domestic trade as well as to the moving of large quantities of war supplies to ports of departure. For the Pennsylvania road east of Pittsburgh the net earnings record was broken in September; the Lehigh's business was the heaviest the road has known, and other roads reported large increases. Passenger business has been helped by the Panama-Pacific Exposition and by the exclusion of American tourists from Europe.

There is evidence of this improvement in Government reports. The Interstate Commerce Commission shows that the net earnings of 116 roads (nearly all of our railroad mileage) were $470 per mile in September, against $392 in the corresponding month of 1914, the gain having been from $637 to $787 on the Eastern roads, and from $372 to $422 in the West. For three months the advance was from $1119 to $1263. This increase of profits was not due to any reduction of operating expenditures, for these were slightly higher this year, but was caused by large additions to gross revenue. The gain of 20 per cent in net for September, and 13 per cent for the three months, is a matter of considerable importance to the companies, their stockholders, and the whole country.

The following dividends are announced:

International Silver Company, Coupon No. 34 of First Mortgage Bonds, payable on and after December 1.

American Cotton Oil Company, preferred, semi-annual, 3 per cent; common, quarterly, 1 per cent, both payable December 1.

Niles-Bement-Pond Company, preferred, quarterly, 1½ per cent, payable November 15.

Niles-Bement-Pond Company, common, quarterly, 1½ per cent, payable December 20.

War Fan—Whad'de yuh think of von Hindenburg's drive?

Golf Fan—His drive is all right but they say he's weak on the green.—*Michigan Gargoyle.*

The Secret of Fast Typewriting

New method enables anyone to write 80 to 100 words a minute without mistakes. It's all in the fingers!

Doubles Stenographers' Salaries

Doubled Salary

Salary Increased 40% Then 20% More

Since writing the letter ... a 40% increase. ... C. J. VERRALL, 66 Olney St., Providence, R. I.

50 Words to 80 $70 Monthly to $150

429 Hamilton ... A. H. GARDENER.

100 Words a Minute

... the Tulloss New Way. Formerly I never exceeded ... words a minute, but since taking up the Tulloss Method I have written as high as 1 ... R. R. MARTIN, Notary Public, Law Office, Seward, Neb.

Why are most stenographers getting only $8 to $15 a week while others get $25, $30, $40, and even $50? Eight words tell the story. It's nothing in the world but *lack of speed and accuracy on the typewriter* that is keeping salaries down—that is robbing most stenographers of the pay they ought to get. Think a minute. What is a stenographer paid for? Isn't it for your *finished product*—for the quantity and quality of letters or other typewritten matter you can turn out in a day?

No matter how good you are at shorthand, you can never expect much increase in pay until you get *speed*—*real speed*—and *accuracy* on the typewriter.

Speed Now Easy for Anyone

Now, for the first time, has an idea been discovered which puts speed—great speed and *accuracy*—within the reach of every typewriter user. Almost overnight it has revolutionized the whole typewriting situation.

Stenographers who formerly never exceeded 30 to 40 words a minute are writing 80 to 100 words with less effort and with infinitely greater accuracy than ever before. And their salaries have jumped from a meagre $8 to $15 per week to $30, $40 and even $50.

Trained Fingers—the New Way

European music teachers, when training their pupils for the piano invariably give special gymnastic finger exercises. This is because untrained fingers are not skillful fingers. The best results simply cannot be obtained—the fingers simply cannot be used correctly—unless the student develops and strengthens the proper muscles.

This training is even more essential to expert typewriting. The reason that so few people can write more than 30 to 40 words a minute is because their fingers are not flexible or nimble enough. This new easy method overcomes this at once—develops finger strength and flexibility by exercises *away from the machine*—trains the fingers *beforehand* for their work on the machine—and the results border on the miraculous.

Valuable Book Free

We have prepared a book which tells all about the wonderful gymnastic finger exercises and explains the course in complete detail, which is free to those interested. It is a big 48-page book, brimful of eye-opening ideas and valuable information. It explains how this unique new method will quickly make your fingers *strong and dextrous*, bring them under *perfect control*, make them extremely rapid in their movements—how in a few short weeks you can transform your typewriting and make it *easy, accurate* and *amazingly speedy*—all this and much more is told in detail. No instruction book ever written, no matter what its cost, ever told so plainly the real WHY and HOW of expert typewriting.

If you are ambitious to get ahead—if you want to make your work easier—if you want to get more money in your pay envelope—don't wait a single moment before sending for this book of information and proof.

Clewell Studios
I St., Canton, Ohio

The Brookfield School

An open-air school for a small group of girls

Directors: Miss Helen Fairman Cooke, A.B. Wellesley College; Miss Marion F. E. Cooke, A.B. Wellesley College

AIM

To develop a sound mind and heart in a sound body
To make the girl capable, alert and womanly.
To make her thorough.
To make her reliable and resourceful.
To make her likable and sincere.
To teach her to think and act with intelligence.
To teach her how to study.
To teach her how to use her mother tongue.
To help her to find herself, and therefore
To make her happy and useful.

METHODS

Individual and class instruction—close supervision of work—careful study of each girl's nature—work made a joy—power of concentration developed—intimate association with teachers—sports made a means of education—teaching by example rather than precept.

COURSE OF STUDY

An enriched high school course—general, special, and college preparatory—modern languages a part of daily life—Domestic Arts—Music—Gymnastics—foundations laid for culture.

PLAY

Tennis—basket-ball—tramping—coasting—skating—snow-shoeing—dancing—singing—games—story-telling—play-acting.

MISS HELEN FAIRMAN COOKE
The Brookfield School
North Brookfield, Massachusetts

Insurance

Conducted by

W. E. UNDERWOOD

J. H. W., Fall River, Mass.—The Great Eastern Casualty is a good company and its rates are about the same as those charged by other stock companies. Your benefits are probably limited. The fact that an insurance company is doing business in New York, while strong presumptive evidence of its financial solvency, is not a guarantee.

S. S. S., Meadville, Pa.—I do not know that any American life insurance company discriminates in premium rates in favor of total abstainers. I know the Equitable provides for periodical physical examinations on request of policyholders, and I believe the Germania Life has recently adopted the practise.

H. V. B., Meeker, Colo.—The Reliance Life is a good average company of nearly $5,000,000 assets on last December 31, a capital of $1,000,000 (which is excessive because policyholders must pay stockholders' dividends on it) and a net surplus of $280,000. The dividend rate to stockholders is not limited. The company writes annual dividend and non-participating policies. The latter would be the kind policyholders in this company should prefer, as the premium rates are net.

T. C. C., Millington, Tenn.—The companies you have in mind, among others, are the New York Life, Mutual Life, Equitable Life, Metropolitan Life, Prudential, Mutual Benefit, Penn Mutual, Provident Life & Trust, Connecticut Mutual, Phoenix Mutual, Aetna Life, Travelers, Masachusetts Mutual, Northwestern Mutual, National Life of Vermont, New England Mutual. All are old line, strictly conservative as to methods and may be, from every point of view, classed as leaders in the United States.

A. M., Boulder, Colo.—Just what the agent you quote meant when he described a company he had not heard of as "under the government," is beyond me. There is no life insurance company under the management of the government of the United States. Wisconsin has a "Fund" which competes with the regular companies, but does not grow either in "stature or favor." The Postal Life is financially sound, with about $130,000 net surplus. It has been examined this year by the New York Insurance Department, but the report has not yet been made public.

I. C. G., Wilmington, Del.—There are leaders amongst life insurance companies as in other lines. Past service to policyholders endows them with preëminence. This is the gift of time. A young company may be just as good financially, it may possess the same ability to render service as an old one, but the latter has had the opportunity to do it, has done it continuously for years and consequently possesses the advantage in competition. Like banks and commercial houses, age and square dealing give to life insurance character and reputation. Was it Thackeray who observed substantially that there are letters of credit written on some faces which are honored wherever presented? Well, that is quite true of life insurance companies, if we will substitute age and reputation for letters of credit. Young life companies, like young men, have their way to make. Many in both classes fail. Both are entitled to such measure of confidence as their work, conduct and results command from day to day and from year to year.

You Say—"I WILL"

YOU have ambition. What you need *now* is the grit-your-teeth determination to say, "I will." "I *will* get out of the rut; I *will* learn more; I *will* earn more."

Man, when you make up your mind to be *well* paid, to be a *success*, no power on earth can keep you down. *All that you need is training.*

If you can read and write, the International Correspondence Schools will do the rest. It has helped thousands and thousands of men in your very circumstances to "*get up*," to *hold* good jobs, to *make* good money.

Lift up your head, throw out your chest and say, "I will." Now, prove your mettle by marking and mailing this coupon *now*. Before turning this page—say, again, "I will"—and mean it. *Mail the coupon NOW.*

A Number of Things

by

Edwin E. Slosson

"The time has come," the Walrus said,
"To talk of many things;
Of shoes—and ships—and sealing-wax—
Of cabbages—and kings—"

WITH these cogent words the Rev. Charles Lutwidge Dodgson, of Oxford, the distinguished author of *An Elementary Treatise on Determinants with their Application to Simultaneous Linear Equations and Algebraical Geometry*, sounded the keynote of modern education. A generation ago, when first uttered, this revolutionary doctrine was regarded as absurd. Historians for three thousand years had concerned themselves almost exclusively with two things, sealing-wax and kings, with legal documents and the doings of royalty, and neglected what is considerably more important and vastly more interesting, the life of the people, what they ate and what they wore and how they got about. The Assyriologist, digging in the ruins of a lost city, seizes upon a cuneiform tablet and eagerly breaks its seal only to meet in most cases with disappointment at finding it a mortgage or a genealogy of the reigning family. The Egyptologist excavating a buried temple discovers upon its walls merely the record of a treaty or a eulogy of a Pharaoh. Doubtless these documents give as false an idea of the language and events of their time as our deeds and treaties would of ours. An up-to-date archeologist would trade a treaty any day for a market report or give a dozen kings for a laundry list or a fashion plate.

But by 1871, the date of the poem quoted above, it became obvious even to a walrus—which has the smallest brain of any mammal of its size—that the time had actually come to talk of many things hitherto ignored by chronicles, annals, monuments, memoirs and state papers. Then arose a new school of historians who dug their material out of the garbage heaps of forgotten cities; sifting ashes, picking up bones, piecing together potsherds, scraping off pavements. Some casual simile in the Homeric poems turned out to be more valuable than the description of a battle, and the philosophical historians with a thesis to prove were less to be relied upon than gossipy globe trotters like Herodotus, who just put down whatever interested him, good stories, queer customs, and everyday incidents. The lives of the Cæsars may be useful to the alienist but the true historian would rather have in equal detail the life of the most ignoble Roman of them all. There was only one Cæsar, ordinarily, and it did not matter much how he behaved, but there were several million common people and their doings on the whole were more important than his. The raids of the northern barbarians are duly recorded, but no historian thought it worth while to mention the raids of the mosquitoes, which had more to do with the depopulation of the Campagna than the Goths and Vandals. The historian of the future with a clearer idea of the real plagues of mankind will not talk so much about the Reign of Nero and the Age of Despots as he will about the Era of Malaria and the Hookworm Period.

The historian of the new school needs to have vastly more knowledge and ability than his predecessors. In order to put down what is most important he must first discover what is most important, no easy task even in contemporary history. Will the Algeciras treaty and the battle of Ypres affect the future as much as the invention of the refrigerating machine and the dynamo? Who is the more important historical personage, George V or George Westinghouse? William II or William Marconi?

It is not difficult nowadays for the historian to be an expert in paleography, philology and archeology; he must also understand biology, geology, technology and psychology. He must know everybody's business in order to know his own. He must haunt kitchens as well as court rooms. He must keep an eye on the women and children. He must watch the weather and count the pigs and chickens. He is not interested in events but in the causes of events, differing in this respect from his predecessor, the annalist, who was incurious of causes and content to put down what happened.

The faults of the old historian were the same as the faults of modern journalists. He dealt with the unusual and therefore the less important things. He was like a grammarian who specified the exceptions but neglected to state the rule. He preferred to write of what he knew least about, of prodigies and miracles, of events remote in time or space. He tells of a freeze or flood but does not state the mean annual temperature and rainfall. He describes the distant landscape but does not say anything about the ground he is standing on. As Professor Robinson, one of the foremost advocates and practitioners of *The New History*, puts it:

> In no other subject except history is fortuitous prominence accepted as a measure of importance. The teacher of chemistry does not confine himself to pretty experiments but conscientiously chooses those that are most typical and instructive. Metallic potassium and liquefied air are less common in the laboratory than water, lime and sulfuric acid. What would be the opinion in regard to a clinical lecture who dwelt upon leprosy and the bubonic plague for fear his students might be bored by a description of the symptoms of measles and typhoid? In every study except history the teacher seeks to make the important and normal clear at any cost.

So the historian of the new school picks up such scattered fragments as he can and tries to piece together the life of past peoples. He still deals with the reigning dynasty but he calls every monarch a Pretender. He recognizes that the real ruler in all ages has been King Demos I. Therefore he is interested in the shoes he wore, the ships he voyaged in, the cabbages he cultivated. He has learned the lesson of the modern geologist who is no longer so much concerned with catastrophic revolutions as with the effects of slow and imperceptible changes and who devotes himself to the study of such questions of climatology and evolution as

> When the sea was boiling hot
> And whether pigs had wings.

An editorial in The Independent of November 1 on "The Censorship of Poetry" commented on the action of the British censor in eliminating the words "and the kings" from a quotation of Kipling's "Recessional." In the House of Commons the question was debated in the following characteristic fashion:

> SIR J. SIMON (Essex, Walthamstow), replying to a question by Mr. OUTHWAITE (Hanley, L.) as to the censoring of part of the line "The captains and the kings depart" in a recent newspaper article, said:—I understand that the gentleman who cut out the three words "and the kings" felt that it would be wrong to say, as no kings were present, that any of them departed. (Laughter.)
>
> Mr. OUTHWAITE.—Is the country still paying for the service of this idiot? (Cries of "Order.")
>
> MR. KING.—Is the right hon. gentleman aware that this gentleman could not have known there might not have been a great number of people of the name of King? (Laughter.)

The London *Times* correspondent in describing the British attack on Hulluch with bombs, shells and gas, compared it to Browning's:

> Twenty-nine distinct damnations,
> One sure, if the other fails.

The censor did not object to the strong language, but he neatly ruled out the words "twenty-nine distinct" and substituted the word "different." Apparently he was afraid that the Germans would learn thru these lines of Browning just how many forms of artillery the British are using.

The New York *Evening Mail* of last Friday, in discussing the Balkan situation, said:

> That there is an estrangement between Russia and its allies is now deemed possible. Russian and British officials have pronounce these reports fabrications put forth by Germany. Russian officials deny there is any possibility of the Czar breaking with England, France and Italy.
>
> Unsettled today, probably fair Saturday, moderate northerly winds.
>
> It is evident the Germans are flushed with victory, for their peace terms are now a notch higher than when last proclaimed.
>
> All signs fail in the Balkans. Saturday found them still unsettled and the southerly wind was too moderate to bring relief.

On the college campus buttonhole any man who looks like a professor and he will give you an original definition of progress and a new explanation of the fall of the Roman empire.

JUST A WORD

This is the sort of letter—with its accompanying check—that marks, and makes, a growing circulation. It is from Birmingham, Alabama: "You will find enclosed check for three dollars, for which please send The Independent for one year to Miss ——, Decatur, Georgia. Last spring I subscribed to The Independent more thru curiosity than anything else, simply to discover the kind of paper it really was—I have found out and am thoroly pleased with the discovery. It has now become a source of great pleasure not only to myself, but to my friends as well. Let me also take this opportunity of expressing my appreciation for the excellent service you have given me in changing the address of my paper—twice during the past two months my address has been changed, but not once has The Independent been a day late."

Travel and toil in the ends of the earth—and sea—have always been interestingly reported in the pages of The Independent. Dr. Edwin E. Slosson, whose peripatetic activities as literary editor have resulted in many novel articles, writes of the less known parts of the Caribbean in "Our Lost Bargain" and "A Week-End in Demerara." The bargain had to do with the Danish islands of St. Thomas, St. John and Santa Cruz. Demerara, Dr. Slosson says, is a "museum of living ethnography." Whaling on the deep seas has been the subject of thrilling narratives, true and otherwise, for generations. Roy C. Andrews writes of the industry from a new angle in an article on "Shore Whaling." Getting as far from sea level as possible, Fanny Bullock Workman, who has climbed many of the world's most forbidding mountains, tells of her adventures on the greatest glacier of Asia, high up in the Himalayas, in an article called "Exploring the Roof." But Independent readers do not travel by proxy alone. To help them in their own touring there will be another set of convenient guides to winter journeys in the issue for November 29. A group of trips of varying length and expense, each covering a popular mid-winter vacation ground, will be outlined with full itineraries and information as to fares and hotels. The feature will be of very real help to those who plan a holiday outing.

THE NEW PLAYS

The Angel in the House. A trivial play which entertains by virtue of Arnold Daly's effective acting. (Fulton.)

Hobson's Choice, with Molly Pearson in a Bambi Bunts role, is a genial little Lancashire comedy with plenty of chuckles, agreeably acted by the principals. (Comedy.)

The Unchastened Woman. The portrait of a supercat, accompanied by moving pictures of the writhings of her victims. A brilliant comedy brilliantly acted. (Thirty-ninth Street.)

At *Quinney's* old furniture shop a pleasant domestic comedy revolves around the eccentric and electric personality of the honestest and stubbornest dealer in London. (Maxine Elliott's.)

Now that his wife, Julia Marlowe, has retired from her Shakesperian roles and the stage, Mr. Sothern returns to comedy. In the keen and delightful *Two Virtues*, by Alfred Sutro, he is himself at best. (Booth.)

The Eternal Magdalene. Theatric, overwrought treatment of the social evil, not badly written and capably played. Insidiously confuses sympathy for the fallen woman with toleration of prostitution. (Forty-eighth Street.)

Our Mrs. McChesney. Ethel Barrymore's delightful personality seen to advantage in three incidents (which hardly make a play) from the career of Emma McChesney, traveling saleswoman. Clean, humorous, entertaining. (Lyceum.)

Grace George and her company propose to give ten plays, some famous and some new, none running over four weeks. Their excellent production of Langdon Mitchell's comedy of manners, *The New York Idea*, and *The Liars*, by Henry Arthur Jones, now alternating, set a high standard for the season. (Playhouse.)

The millions of friends of the firm of Potash & Perlmutter will rejoice in the continuation of *Abe and Mawruss* on the stage. Tho they dissolve partnership and go into bankruptcy, they are soon on their former terms of mutual affection and recrimination. The success of the stories and plays of Montague Glass shows that racial satire, if kindly and good humored, is not offensive. (Lyric.)

The Washington Square Players have the happy combination of ability and new ideas. Writing, acting, producing all in one—they present two alternate bills, each of four one-act plays: one a study in comparative comedy, the others ranging in theme from the European war to satires of Troy and from a Maeterlinck "Interior" to "A Yankee Fantasy," by Percy Mackaye. (Bandbox.)

The Strangest Woman in all History

HAVE you read about CATHERINE THE GREAT of Russia—the auburn-haired queen—the queen of romance? Was she the great queen—ardent lover—faithless wife—rumor has told? Was she twenty women in one—more beautiful than Helen of Troy—more brilliant than Cleopatra—more ruthless than Catherine de Medici—greater than Queen Elizabeth of England—this woman who came from a modest German duchy to rule over a wild Russian court and a wilder Russian land? What is the truth? The story of her life and every other character in history is to be found in the world-famous publication

Ridpath's History of the World

Dr. John Clark Ridpath is universally recognized as America's greatest historian. Other men have written histories of one nation or period: Gibbon of Rome, Macaulay of England, Guizot of France, but it remained for Dr. Ridpath to write a History of the entire World from the earliest civilization down to the present day. We offer the remaining sets of the latest editions.

At a Great Sacrifice in Price and on Easy Terms

We will name our **special low price** and **easy terms** and mail our 46 page sample booklet to all readers interested in our offer. **Mail us the coupon below.** Tear off coupon, write names and address plainly, and **mail now before you forget it.** The beautiful sample pages will give you some idea of the splendid illustrations and wonderfully beautiful style in which the History is written. Thousands have already availed themselves of our great offer and every purchaser is more than satisfied.

THE INDEPENDENT

In reviewing this work said in part: "Ridpath's History of the World is really a great production. In the variety and arrangement of its material it is encyclopedic, and its illustrations have been taken from the highest sources. The author has done his work in the most thorough and interesting manner. No library is complete without it."

Ridpath's Graphic Style

The reason for Dr. Ridpath's enviable position as an historian is his wonderfully beautiful style, a style no other historian in any generation has ever equalled. He pictures the great historical events as though they were happening before your eyes, he carries you with him to see the battles of old, to meet kings and queens and warriors, to sit in the Roman senate, to march across Saladin and his Turkish hosts to rout the Christian knights, to sail the southern seas with Drake to circumnavigate the globe with Magellan. He combines absorbing interest with supreme reliability and makes the heroes of history real living men and women and their times the real and full of surprises in such a fascinating style that history becomes as absorbingly interesting as the greatest of fiction.

Six Thousand Years of History

RIDPATH throws the mantle of personality over the old heroes of history. Alexander is there; patriot, warrior, statesman, diplomat, crowning the glory of Grecian history. Xerxes, from his mountain platform, sees Themistocles with three hundred and fifty Greek ships smash his Persian fleet of over a thousand sail, and help to mould the language in which this paragraph is written. Rome perches Nero upon the greatest throne on earth, and so sets up a poor madman's name to stand for countless centuries as the synonym of savage cruelty. Napoleon fights Waterloo again under your very eyes, and reels before the iron fact that at last the end of his gilded dream has come. Washington is there, "faith equal to all the winds" grave, thoughtful, proof against the wiles of British strategy and the personal decoy of false friends, clear-seeing over the heads of his fellow countrymen, and on love another century, the most colossal world figure of his time.

THE LEADER OF A RACE

IN THE DEATH OF BOOKER T. WASHINGTON, PRINCIPAL OF TUSKEGEE INSTITUTE AND A WORKER ALL HIS LIFE FOR THE UPLIFT OF HIS PEOPLE, THE NEGROES OF THE WORLD HAVE SUFFERED A SEVERE LOSS

OUR NATIONAL THANKSGIVING

THIS is no time for a World's Thanksgiving. For the world it is a long period for humiliation, fasting and prayer. For the United States alone among the greater nations of Christendom this is a day and a year for unusually fervent thanksgiving.

And yet for us it will seem difficult for our thanksgiving to escape a tinge of selfishness and a taint of vanity. Are we so much better than the other nations that we may rejoice in peace and prosperity, in homes unbroken, in the abundant rewards of business and labor, while as for our sister nations their lands are devastated, their cities bombarded, their men driven like sheep to the shambles, and every household mourns a husband or a brother? This is the most horrible year of the world's history, fire and slaughter carrying ruin over sea and land and showering death down from the skies, while we sit untroubled in happy peace and thank God that we are not as other nations are. Are we so much better than they? Is it that the lust of blood is not in our veins that we are not greedy to rob our neighbors of their possessions, or is it that the accident of our position and the dissevering ocean have made it easy for us to escape their fate?

Even our gratitude to God might be a sin if with it we failed to do all in our power to relieve the sufferings of those whom this cruel war has driven to despair. Think not of Belgium only, nor of Poland or Serbia, but of the millions of families in Great Britain and France and Russia and Italy and Germany and Austria that are in mourning. Think in Germany and Austria alone of 900,000 boys that have grown big enough this year to be drafted into the army, and as many more every year to be fed into the cannon's mouth so long as this war shall last, and an equal or greater number from the allied nations dragged from their homes by conscription equally to slay and be slain. The world has never known such horror. All this we escape. Consider that in the world's fairest provinces, in the empire where our Lord was born the Prince of Peace, where Constantine proclaimed Christianity the religion of the world, a whole nationality of Christians has been brutally annihilated, their men massacred, their women and girls stripped and sold at public auction, to be buried in Turkish harems. This is what war has done, a war between the Christian nations of Europe, and Christendom has boasted its civilization, enlightenment and culture.

Again we ask, are we better than they? It may dash our national vanity somewhat to remember that our grandparents used thus to sell American women and men, girls and boys, on the auction block, and that, too, not in the passion of war but as an ordinary incident of trade. All that, thank God, has past two generations ago, but during this year of thanksgiving, an organized mob, in a case that stirred the whole country, tore a fainting Jew from the custody of the sheriff in their madness lest he might be thought innocent of crime and hanged him to a tree; and a hundred others every year are here murdered by mobs. Surely we may lift our voices in thanksgiving, but it must still be mingled with humility.

Yet may we not only with all humility rejoice before God that in His good providence and in the wisdom of our people and rulers we have preserved the blessings of peace in the midst of war about us, but may we not also believe and be glad that ours is the happiest, the most fortunate nation on the face of the globe, as well as the most prosperous? If such be the case it is our duty, this day and during many days that will follow, to stretch out liberal hands to feed the famishing, to heal the wounded, and to welcome the refugee.

This will evidence the measure of our thanksgiving and will ensure the ancient blessing: He hath dispersed, he hath given to the needy; his righteousness endureth forever.

THREE ROADS AND ONE

THE United States is at the parting of the ways. Three roads branch out ahead. From the first beckons Mr. Bryan. From the second beckons Mr. Wilson. From the third beckons Mr. Roosevelt.

The first is well worn. It is the road our fathers trod. It is the road of no entangling alliances, of "malice toward none and charity for all," of an insignificant army and navy, and the insistence that moral rather than physical force makes a nation great. It has been sufficient for the country for over a hundred years.

The second road is the first road adapted to twentieth century conditions. It is, just now, the popular road. But it is likely to be very costly. It is for defense, not for aggression. The chief danger is that after it goes a few miles it may turn into the third road.

The third road has never been proposed in America until today. But many roads like it are to be found in Europe. It is the road of universal military service, of blood and iron, of the glorification of force. It leads directly to the precipice.

Mr. Bryan's road is an honorable one, but our country is no longer isolated. The inventions of steam and electricity, by annihilating time and space, have turned the oceans into lakes and the continents into neighboring counties. Mr. Bryan's road is outworn and the nation that follows it takes a risk.

Mr. Wilson's road is safer. But whether the security advantages outweigh the moral and economic disadvantages depends on the future temper and self-control of the American people.

Mr. Roosevelt's road is dangerous, impracticable and provocative. It means, if universally adopted, that war will consume all the fruits of progress. And this no progressive civilization will ever admit.

One of these three roads, however, the United States must take for the immediate future. Which shall it be? Mr. Wilson's is the mean between the extremes. It is the surest and safest. But at the same time we must express our deep regret that such measures seem now to be necessary.

But this road, if we take it, or for that matter either of the other roads, must be turned into the

broad highway of international peace—The League of Peace.

This is not a national road, but an international road. It has never yet been built. But a committee of engineers headed by Mr. Taft have worked out the preliminary plans and specifications. The League of Peace road proposes to substitute a scheme of collective armaments for our present unscientific plan of competitive armaments. For thus and thus only will a formula be devised for the progressive limitation of armaments and the enthronement of international law and order—by force if necessary.

The roads of Mr. Bryan, Mr. Wilson and Mr. Roosevelt are the roads of the old Nationalism. The road of Mr. Taft is the road of the new Internationalism. For which shall our preparedness be?

ALWAYS IN THE TRENCHES

IT is well nowadays for us all to be reminded, as John Robertson reminded the British Miners' Federation at Nottingham, that peace has its victims not less tho fewer than war, and that a large number of men are "always in the trenches." During the fifteen years that have past since the South African war, 22,000 miners have been killed in Great Britain and more than 3,000,000 injured seriously enough to incapacitate them for work for a week or more. In 1914, out of 800,000 working underground, 165,000 were seriously injured.

Our own record is much worse than the British. In the American coal mines in 1913 there were 2785 fatal accidents among employees. We should also consider the fact that in that year 3787 employees were killed and 172,783 seriously injured on the steam and electric railways of the United States.

A considerable part of these deaths and injuries are, it must be admitted, as unnecessary as the slaughter in the trenches.

AMERICAN LIVES AGAIN

IF the Italian steamship "Ancona" was ordered by an enemy submarine to stop and refused to obey, the commander of the submarine was justified in sinking her. The passengers who were killed, including the nine American citizens, merely paid the logical penalty for sailing in a ship whose commander violated the accepted rules of international law. The United States Government has no grounds for protest if this is the case.

But is it the case? Was the "Ancona" ordered to stop? Did her captain refuse? Did she try to run away? These are vital questions of fact.

If they are answered in the negative—and the indications are that they will prove to be so answered—the United States has a new "Lusitania" and "Arabic" case confronting it. What shall we do about it?

We must hold Austria to a "strict accountability." We must demand reparation, "so far as reparation is possible, for injuries that are without measure," for the lives of American citizens. But, above all, we must demand—and secure—from Austria the same assurance that we demanded—and have secured—from her ally, Germany. We must compel Austria to pledge herself not to attack merchant ships without warning nor to sink them without first making secure the lives of passengers and crew. No less than this is justified under the law and customs of nations; no less than this can the United States accept and live up to its responsibility to protect the lives of American citizens on the high seas.

This we must demand, and Austria must concede.

Unless, and the proviso is a disturbing one, the assailant of the "Ancona" was not in reality an Austrian submarine, but a German submarine flying the Austrian flag. In that case the task before us is not so simple. We shall have to deal not merely with a violation of American rights, but with the violation of a definite pledge made to the United States by the German Government.

We must await the determination of the facts. But once they are determined, we must act with promptness and decision. Unless it is clearly shown that the captain of the "Ancona" tried to flee when ordered to stop for examination, we must address a peremptory demand to Austria—or to Germany, as the case may be.

If, after all the long-drawn-out negotiations over the "Lusitania" and the "Arabic" cases, the lives of American citizens sailing on law-abiding merchant ships are still not safe from attack, it is time that the American people knew the reason why.

HUNTING FOR NEW FATS

ONE of the by-products of the war is the most extensive experiment in dietetics ever carried on in the history of the world. Germany and Austria-Hungary, being hemmed in on every side by enemies, have been obliged to rely upon their own resources for nearly all of their food supply for a year and a half, and no one knows how much longer they will have to keep it up. Now cities have been besieged from the beginning of history, but never before has attempt been made to starve out a population of 118,000,000. But, on the other hand, never before has there existed a knowledge of the principles of nutrition and a government intelligent and powerful enough to apply them. We now know something of the composition of foods and which are capable of replacing others. The problem, then, of making the food supply last as long as possible involves the determination of the total amount of each of the three essentials of diet in all available kinds of food in the country, and then seeing that each person, rich or poor, gets as much and no more than is necessary. When we consider that a large part of the population of Germany, as of every other country, is permanently underfed, and that another part, perhaps nearly as large, habitually overeats, and that neither class, as a rule, understands the elements of food chemistry, we can see what a stupendous problem this is.

Nevertheless it has been undertaken by the German Government, and so far with success. The study of the question was put into the hands of a committee of sixteen specialists is statistics, agriculture, physiology and chemistry. Their preliminary report is published under the title of *Die deutsche Volksernährung und der englishe Aushungerungsplan* (The Food Supply of the German People and the English Starvation Plan). The German people before the war were eating, or rather using up food, at the rate of 3642 calories a day per person. This, in the opinion of the board of experts, can be safely reduced to an average of 2290 calories for each

inhabitant, which is the equivalent of 3000 calories per adult. This is practically the same as the average adult dietary as calculated by Olsen (3030 calories) or Atwater (2925). For a man at moderate work the European standard of Voit was 3230 and the American standard of Atwater 3400. The peace ration of the United States army is 3730; that of the German army was 2725. The calorie is the unit of heat or energy, and is equal to 3077 foot-pounds.

The next step of the German commission was to take an inventory of all available sources of food. It was calculated that there was enough food in sight for the ensuing year to provide 2734 calories per person. This is nineteen per cent above the estimated requirements, a narrow margin of safety at best, considering the waste inevitable in war and the feeding of more than a million unproductive prisoners. It is the equivalent of 3470 calories per adult. This, then, was the measure of the amount of available energy at the disposal of the German people for carrying on the war and their ordinary vocations.

But it is not enough that the total energy content of the food supply should be adequate. The various essential constituents must be present and in proper proportion. Now in carbohydrates Germany is well off. Beet sugar, formerly exported, was so abundant that it was fed to the pigs. Potatoes grown on every vacant lot supplied plenty of starch. But in regard to protein the Government experts stated with characteristic German frankness the supply was three per cent below the minimum requirements. They advised, therefore, the limitation of bread and the extensive cultivation of beans. The bread ticket system, which gives each individual about six slices of bread a day and no more, was put into effect and seems to have been efficacious, for it has been found possible, when the new harvest came in, to raise the allowance.

But the third food element, the fats and oils, has now run short and there is great distress in consequence. Fat provides the most concentrated form of energy found in food, more than twice as much per pound as carbohydrates or protein. Everybody who has been in Germany or in German restaurants knows that they are accustomed to liberal allowances of fats of all kinds. Much of their supply is ordinarily imported, copra or coconut oil from the Philippines, olive oil from Italy, lard and cottonseed oil from the United States, butter from Holland, fish oil from Norway, palm and peanut oil from Africa, etc. They are now largely or completely shut out and, besides this, the wholesale slaughter of pigs and cattle in the fall of 1914 to save their feed has made a shortage of pork and butter this year.

The German Government has taken up the fat problem with the same energy and by the same methods as it did the protein problem a year ago. Strict economy is encouraged and enjoined and a systematic search instituted to find new sources of oleaginous substances. All the Germans now are Catholics on Friday and Jews on Saturday. No fats or foods cooked in fats are to be sold in shops or restaurants on Mondays and Thursdays, no meat on Tuesdays and Fridays, no pork on Saturdays. On Sundays and Wednesdays they may eat what they like. Daily "grease tickets" are to be issued, like the bread tickets, to each person.

Housewives are instructed to save their pumpkin pips and cherry stones, for it has been found possible to distill from these an oil as nutritious as olive oil. Children are set to collecting beechnuts, acorns and sunflower seeds for the same purpose. Fish oils and the like, which, on account of their odor, could not be used for food, are converted into solid white and neutral fats by means of hydrogen. Such products of catalysis are apt to contain traces of nickel and iron, but dietary experiments prove these to be quite harmless.

In our editorial of August 14, "Living on Air," we told of the recent experiments in the production of protein by feeding yeast with sugar and synthetic nitrogenous compounds obtained from the atmosphere by electricity. In a recent number of the *Chemiker Zeitung* Professor Delbrueck announces the discovery by a chemist in the trenches of another form of ferment which produces from these raw materials a food product containing seventeen per cent fat, forty-three per cent carbohydrates and thirty-one per cent protein. This is regarded by devout Germans as a miracle of Divine Providence comparable to the manna of the Sinaitic desert and feeding of Elijah by the ravens.

It is hardly to be expected such novel expedients as these last will do much toward relieving Germany's present need, but they are interesting as bringing visibly nearer the time prophesied long ago by the French chemist Berthelot, when man shall manufacture his own food in abundance and variety unattainable so long as he is dependent upon what happens to be found in plants and animals. The processes which necessity has brought forth in Germany will be of benefit to the whole world and relieve future generations of the fear of famine. Germany and England, thru their antagonism, are thus involuntarily and unwittingly working together to force the solution of the greatest problem the human race has to solve, the question of food supply.

WHAT IS A CONSTITUTION?

THE overwhelming defeat of the new constitution for New York state was a curious thing. Tammany opposed it, presumably because it was too enlightened. Many progressive men thruout the state opposed it because it was not enlightened enough.

Whichever view was right, one thing is certain. The proposed constitution was too long. The constitution of the United States, with all the amendments of a hundren and twenty-five years, contains forty-four hundred words. The document prepared by New York's Constitutional Convention contained thirty-three thousand words.

The United States has worried along for a century and a quarter on a body of fundamental law little more than one eighth as great as that with which it was proposed to burden a single state.

A constitution ought to be the statement of a group of fundamental principles upon which may be erected, as occasion demands, a structure of legislation applying those principles to specific conditions. The Federal Constitution is such a statement. The defeated New York constitution was such a statement plus a mass of provisions that belonged not in the constitution but on the statute books. This reason alone was sufficient to warrant its defeat.

THE STORY OF THE WEEK

Constantine Dissolves Parliament

By what is little less than a *coup d'etat*, King Constantine has got the upper hand of the pro-Ally party and the attitude of Greece is causing serious concern to London and Paris. Ex-Premier Venizelos, who favored going to the aid of Serbia, commanded a majority in Parliament but now he is powerless for a new election is not to be held until December 19 and in the meantime the King as commander-in-chief of the Greek army can do what he likes. An election held while all the able-bodied young men are with the colors would not be a valid expression of the will of the people and if the King demobilizes the army before that date it will insure the non-participation of the Greek forces on the Allied side, at least for some time, which is what the King wants. Premier Sokouloudis is reported to have assured the Bulgarian Minister at Athens that Greece will not attack Bulgaria.

But there is a more portentous possibility, which is that King Constantine may put his army at the disposal of the Germans. This would mean that Salonica would be closed to the Allies and that the French and British troops which have advanced into Serbia would be cut off from supplies or the possibility of retreat while they would be attacked by superior forces of Germans and Bulgars.

The French and British representatives at Athens have asked the Greek Government for assurances that if the Serbs are obliged to retreat from Serbia into Greek territory they will not be disarmed and interned. The assurances so far have not been given. The Bulgarian Government has lodged a formal complaint against Greece for tacitly permitting the French and British to violate her neutrality by using Greek territory for military operations.

It is said that Premier Radoslavoff, of Bulgaria, has agreed that the Bulgarian troops in their pursuit of the Serbs will not cross the Greek frontier and will not enter Monastir, which is more of a Greek than a Serbian city, altho it is ten miles inside the new Serbian border.

It is rumored that an Austro-German military commission composed of men of prominence is now touring Greece in motor cars and has been in consultation with the King, also that German officers are superintending the construction of fortifications on the island of Corfu and the coast of Epirus. This is in accordance with another rumor that Greece and Bulgaria have come to an agreement as to the partition of Albania. The Greeks are to annex the southern part and the Bulgars the northern part as well, presumably, as the intervening part of Serbia. This would give the Bulgars their long desired haven on the Adriatic but it would thwart the wishes of Italy, which aspires to the possession of the Albanian coast. It is announced that the Italian Government has finally decided to take part in the Balkan war and it is supposed that this will take the form of an expedition into Albania which, if it were not for the lack of roads thru the Albanian mountains, would enable them to aid Serbia by entering that country from the west and meet the Bulgars invading it from the east.

THE GREAT WAR

November 8—Germans take Krushevatz, Serbia. Italians attacking Col di Lana in Dolomites.

November 9—Italian liner "Ancona" sunk by submarine. Bulgars take Leskovatz, Serbia.

November 10—Germans retiring west of Riga. Bulgars bombard Krivolak, south Serbia.

November 11—Churchill resigns from British Cabinet. Parliament appropriates two billion dollars for war expenses.

November 12—King Constantine dissolves Greek parliament. Twelve Allied vessels sunk in Mediterranean and two German cruisers sunk near Sweden recently.

November 13—Bulgars gain left bank of Morava river. Fighting in Champagne and Artois continues indecisive.

November 14.—Austrian aeroplanes drop bombs in Verona, killing 28. French and British trying to take Veles from Bulgars.

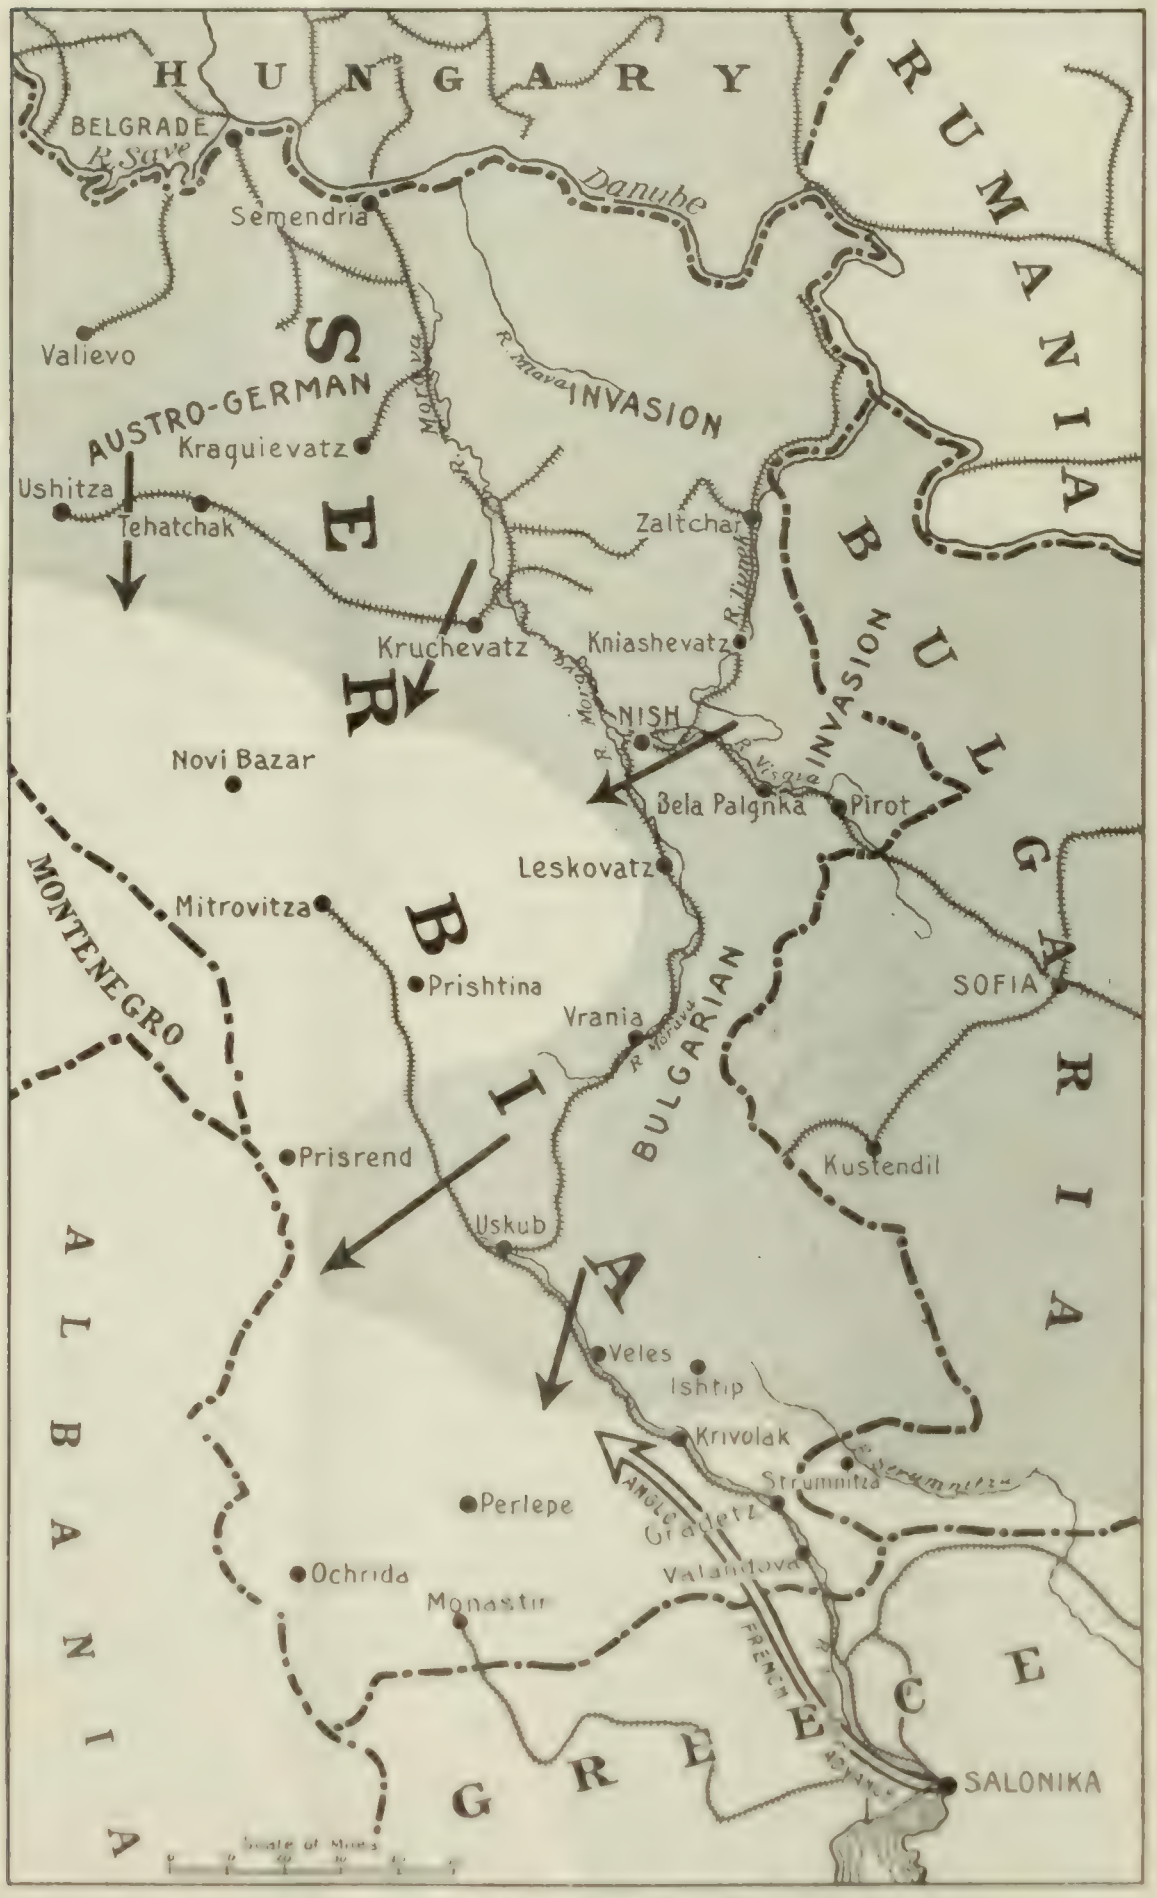
VICTORY AND HINDENBURG!

Celebrating the birthday of the German field marshal by illuminating the great wooden statue in Berlin

The Route to Constantinople Opened



"The Kaiser has taken train for Sofia and Constantinople." This note in the news, whether authentic or not, shows the astonishing change in the situation caused by the Serbian invasion. It means that already the Germans and Austrians have opened communications with their new allies in the east, the Bulgars and Turks. Munitions and supplies are now being sent down the Danube to the Bulgarian river ports and there transshipped by rail to the Bosporus. The Austro-German troops advancing southward up the railroad from Semendria have been met by the Bulgars advancing northward from Nish, so a thru railroad route from Belgrade to Constantinople will soon be opened if it is not already. The movements of the invaders were so swift that the Serbs had to evacuate railroad and cities in the greatest haste. The aged and invalid King Peter is said to have been almost caught in the capture of Kraljevo as the dilapidated automobile in which he was carried off got stuck in the mud of the road and he had to take a country wagon. The storming of the outer forts of Nish by the Bulgars took the Serbian Government officials by surprize and they had barely made their escape in automobiles when the capital was entered. The Bulgars report the capture of 5000 prisoners at Nish as well as forty-two cannon and a large quantity of small arms and ammunition. They also obtained here 700 railroad cars and many automobiles.

The action of King Constantine in calling to the colors the recruits of the second line, thus raising the strength of the Greek army from 400,000 to 500,000, is considered alarming by the Allies. On the other hand the fact that the Greek Government has just obtained a loan of $8,000,000 from France, England and Russia would indicate that the Allies were to be supported if Greece enters the war.

Nish is the junction of the railroad lines to Belgrade, Sofia and Salonica and of the line to Prahova on the Danube opposite Rumania, which is not quite completed but doubtless soon can be. Following the capture of Nish the Bulgars crost the Morava River at several points and have cleared most of the left bank of the river of Serbian forces. All of the railroads centering at Nish are therefore in the possession of the invaders as far south as Veles. Here the French are holding the Bul-

gars in check while west of this point between Veles and Prelepe a force of some 5000 Serbs have held Babuna Pass against four times that number of Bulgars armed with superior artillery.

The capture of the great Serbian arsenal at Kragujevatz is said by the Germans to have yielded them rich booty. The stores of metals, oil and rubber found there is valued at about $10,000,000 and the ammunition factories, well equipped with American and European machines, are said to be in working order except for the slight damage, like the cutting of belts, which the Serbs were able to do at the last moment before they left. Berlin claims that in the recent advance of the Austro-German and Bulgarian forces more than 54,000 prisoners were taken, to which must be added the 40,000 already in Austro-Hungarian hands. They have also captured 478 Serbian cannon, which must be most of the heavy artillery possest by the Serbs. Among these are British naval guns and new French field howitzers which had been sent into Serbia recently to check the Teutonic invasion. Here also were found some old Krupp cannon which the Serbs had taken from the Turks a few years ago. The Serbs as they left Kragujevatz had thrown gunpowder about the buildings but the Germans arrived quickly enough to prevent the explosions by flooding the ground.

CORNERING THE SERBS

Attacked on the north and west by the Austro-German armies and on the east by the Bulgarians, the shattered forces of Serbia are reliving now the movements for a last stand. In the south the army of Prince Regent Alexander which took part in the Balkan campaigns of 1912-13 is being hard hit by the Bulgarian forces which have cut across Serbia to the Albanian border near Prisrend. Following the capture of Nish, the temporary capital, the Bulgars have driven the Serbs from the left or western bank of the Morava River and now the railroad from north of Nish to south of Veles. The railroad from Belgrade south to Nish, the Timok and the mountains about Perlepe are being stubbornly defended against the Bulgarian attack in the very heart of Serbia. The capture of Krivolak puts the Austro-Germans in possession of the western branch of the railroad.

The War in the Near East

With the Kaiser on on his way to Constantinople and with talk of a German Egyptian campaign in the air the war is rapidly extending eastward. There are vague rumors of widespread disaffection and disorders in India. One of the many surmises about Lord Kitchener's hasty departure to the east is that he is needed to quell a rising in India. Another theory is that he is to organize the defense of the Suez Canal. It is also hinted that Japan may be called upon to preserve order in India, which, according to the terms of the Anglo-Japanese treaty, she is under obligation to protect. It has just leaked out that the Nizam of Hyderabad was deposed last September by his people because of his pro-English sympathies.

Persia, lying as it does between Turkey and India, is now the object of contention and likely soon to be altogether involved in the war. Neither Russia, England nor Turkey has shown any regard for its neutrality. The northwestern province of Azerbaijan has been raided by Turks and Kurds who massacred the Armenian and Nestorian Christians there until the Russians drove them out. For several years preceding the war the Russians have been gradually extending their power in northern Persia and were virtually in military control of Azerbaijan and the southern shore of the Caspian. Now they are reported to have sent a force to Teheran, in order to expel the German and Ottoman agents who, it is said, are actively engaged in the capital in trying to induce the Persians to espouse their cause.

In southern Persia, which according to the Anglo-Russian agreement of 1907 became a British sphere of influence, the British had already secured a foothold before the outbreak of the war and since then they have increased their forces in this section. They are now practically in possession of both the Persian and the Arabian shores of the Persian Gulf as well as of the region to the north of it, valuable because of its petroleum deposits.

The British expedition which for more than a year has been working its way up the Tigris and Euphrates rivers from the head of the Persian Gulf, has now almost reached Bagdad, the capture of which will have immense political and religious influence throughout the Moslem world.

It is further reported from Singapore that the Sikh Guides from the Malay

States and two Punjabi regiments have left for Aden to form an expedition for the invasion of Arabia from the south. Arabia has always been earmarked for England in the various plans for the final partition of Turkey which have been discussed and now the time seems ripe for her to take possession. Aden, which stands at the mouth of the Red Sea and therefore commands the southern entrance to the Suez Canal, has been in British hands since 1839. The Suez Canal is now closed "for military reasons."

From Gallipoli we hear only the same wearisome and distressing tales of trench fighting, attacks with hand grenades, the explosion of mines, the dropping of bombs from aeroplanes and perpetual bombardment by land and sea, of fruitless effort and terrible sacrifices. It is now fully acknowledged that the attack on Constantinople by way of the Dardanelles and Gallipoli has proved a failure, whether or not it was a mistake to have undertaken it. General Sir Ian Hamilton, who has had charge of the Gallipoli campaign, has been recalled to England to report on the situation and advise as to a continuance of the effort. General Sir Charles Carmichael Munro has taken his place at the head of the Mediterranean forces.

Attack on Riga Repulsed

The attempt made by the Germans two weeks ago to get at Riga from the west by a movement along the Gulf has been foiled by the Russians with the aid of the elements. Starting at Kemmern about twenty-five miles west of Riga the Germans advanced some seven miles as far as Schlok on the river Aa, but could get no further. The region between the Aa and Riga is low and marshy and the heavy rains flooded the swamps. The Russians, more familiar with the country and less embarrassed with impedimenta, made incessant attacks upon the Germans and in the course of eleven days dislodged them from the Aa and drove them back beyond Kemmern with heavy losses.

In the lake region west of Dvinsk, also, the Germans have lost ground during the week and in Galicia the Russians claim great successes and the capture of large numbers of prisoners.

The failure to take either of these important cities, Riga and Dvinsk, which two months ago were virtually conceded to them by Petrograd, is a humiliating disappointment to the Germans, altho it is doubtless due chiefly to the withdrawal of troops and the concentration of effort upon the Serbian campaign. The German offensive in the Champagne has been backed up by reinforcement with some of the victorious veterans of the Russian front, while new recruits have been sent to take their places in the army before Riga. It is rumored that Hindenburg refuses to make any further attempts to capture Riga and Dvinsk with the scanty and ineffective forces at his command and that the Kaiser has quarreled with him in consequence.

THE END OF THE DAY—TOMMY ATKINS SLEEPS EASILY

International Film Service

THE END OF THE FIGHT—TAKING THE BODIES OF SERBIAN SOLDIERS INTO NISH

The Sinking of the "Ancona"

Several Teutonic submarines have been active in the Mediterranean last week and some twenty vessels of various sorts are reported to have been attacked, in most cases sunk with considerable loss of life. How the submarines got into the Atlantic is a mystery. The British believe that it is impossible for them to make their way thru Gibraltar as a German submarine did once before. The Italians claim to have kept good guard over the Austrian ports on the Adriatic. The blockade of the Dardanelles by the British and French is supposed to be effective. It has been suggested that the submarines might possibly have been shipped overland from Germany and launched from some Bulgarian or Greek port on the Aegean.

The most serious of their depredations was the sinking of the Italian liner "Ancona" with a loss of life second only to that of the "Lusitania." The "Ancona" had left Messina for New York with 507 passengers and crew on board. The passengers were mostly Italians and Greeks with their families, so among the lost are many women and children. There were, of course, no munitions or troops on board.

About noon on Tuesday, November 9, as the "Ancona" was passing between Sardinia and Tunis, a submarine of unusual size appeared flying the Austrian colors. The accounts of what occurred are conflicting. According to the captain's statement the submarine opened fire at a distance of several miles and altho he immediately stopped the ship the shelling continued even when the submarine was only 300 yards away. The boats were fired upon as they were launched and the crew of the submarine jeered and laughed at the drowning people.

On the other hand several of the passengers report that the captain did not stop the vessel at the warning shot but put on full speed and was only overhauled by the enemy after a stern chase of more than an hour. The commander of the submarine then gave the "Ancona" forty-five minutes in which to put the passengers in boats before the ship was torpedoed. There was no order or discipline on board, but a wild panic and a free fight for places in the boats. Some of the boats were overcrowded and capsized in the launching; others went off half empty. Those that remained afloat were either picked up by steamers or made their way to the African coast. It is thought that 208 lives were lost. Among them are said to be nine naturalized Americans. There were on board forty Armenian refugees whom the American Consul had rescued from massacre. Of these ten were drowned.

Besides the "Ancona" many other vessels of the Allies have fallen victims to the German submarines, presumably in the Mediterranean, altho the place is not usually revealed in the despatches. Among these is the French steamer "Yser" which as the "Dacia" figured in the controversy over the freedom of the seas. She was built in England for the Hamburg-American

© *International Film Service*

A $1,500,000 FIRE AT BETHLEHEM

The Bethlehem Steel Company's No. 4 machine shop was burned on November 12. The plant was working night for the Allies. The fire is an especially serious interruption to this work because of the difficulty of replacing the necessary machine tools

Line but after the outbreak was sold to E. N. Breitung, of New York, and started for Rotterdam under American registry with a cargo of cotton. Altho cotton was not then contraband, in spite of the fact that she bore a neutral flag and was bound for a neutral port, the "Dacia" was seized by a French cruiser and confiscated as a prize. The cotton was paid for.

The Italian steamer "Firenze" was sunk later. Out of 144 persons on board 123 have been rescued. The Italian Government holds that the submarine was German, not Austrian. If so it may bring Italy into war with Germany and involve the United States.

British Affairs

Parliament promptly granted the request of Premier Asquith for four hundred million pounds more, but incidentally the prevailing dissatisfaction with the condition and conduct of affairs was voiced more freely than before. Several members criticized the Government for extravagance and waste. The war cost Great Britain an average of $21,750,000 a day up to September 12. Since then the cost has doubtless been higher as the field of operations widens and more men come under arms.

The Premier was also attacked for the suppression of the *Globe*. Because of its disobedience to the censor the office of the *Globe* was raided, its forms broken up, its presses disabled and its copy carried off. The charge against the *Globe* was that it had "invented and circulated a malignant and mischievous lie, had supported its statement with a false and malicious reason and had reasserted it after it had been officially denied." The *Globe* is allowed to resume publication on November 17. The statement which caused its suspension was that Lord Kitchener had resigned on account of disagreements.

In the Parliamentary debate, the Government was accused of tyranny and of partiality in not also suppressing Lord Northcliffe's paper, *The Evening News*, which had referred to the rumor in a more guarded manner. In defense of the Government the Home Secretary and the Premier explained that Lord Kitchener had not resigned, but that on account of serious information received on November 3 it was decided to send him abroad on a confidential mission the next day. The papers were explicitly warned not to refer to his movements in any way. The *Globe* defied the injunction and being called to account for it repeated the offense in the next issue.

Lord Kitchener's mission is still a mystery, but it is assumed that he will at first go to Athens and try to straighten out the Balkan muddle. M. Denys Cochin, a member of the French cabinet without portfolio, is said to have gone to Athens to work with him.

Winston Spencer Churchill, who is virtually a member without portfolio of the British cabinet, since he holds the sinecure of Chancellor of the Duchy of Lancaster, has resigned this position and will go to France to join the Oxford Hussars, in which he is a major. Mr. Churchill served in the South African war and was captured by the Boers, but managed to escape. He was First Lord of the Admiralty when the war broke out and England owes it to him that her fleet was assembled and ready for action. But he is blamed for the Antwerp and Gallipoli fiascos. The cause of his resignation appears to be, like that of Sir Edward Carson's, that he did not wish to be held responsible for the present policy of the Government.

The probability that England will soon have to resort to conscription to keep up the supply of troops becomes increasingly evident. Lord Derby, who has taken charge of recruiting, has announced "that if young men medically fit and not indispensable to any business of national importance or any business connected with the general good of the community do not come forward voluntarily before November 30" compulsory means will be taken to secure their enlistment.

In fear of this there has been a rush of young men to leave for the United States and the steamers have been besieged with applicants for passage. The Government has now put a stop to the exodus by requiring passports for ablebodied men wishing to emigrate. In New Zealand the Government has the same difficulty to meet, for large numbers of young men have departed to the United States to escape military service.

The large British cabinet has proved to be too cumbrous for managing the war, so henceforth its direction will be in the hands of five ministers, Premier Asquith, First Lord of the Admiralty Balfour, Minister of Munitions Lloyd George, Colonial Secretary Bonar Law and Chancellor of the Exchequer McKenna.

Orders for War Supplies

The president of the National Surety Company recently estimated, upon a basis given by the demand for bonding by manufacturers and buyers, that the war orders placed in this country and Canada amount to from $1,500,000,000 to $2,000,000,000. He assigned one-third of this total to Canada. At Ottawa, last week, Mr. Thomas, the representative of Great Britian's Minister of Munitions, said that Canada had received, or would receive eventually, orders amounting to $500,000,000. In an official report the Canadian Car and Foundry Company speaks of its large orders from Russia for shells and says that its business for the year ending with September next will amount to $150,000,000, altho its best annual record up to this time has been only $27,000,000.

Among the orders recently placed here by Russia are one for $50,000,000 worth of cartridges, small arms and machine guns, taken by the Bradley Construction Company, which has bought the plant of the Savage Arms Company, in Utica, and one for 5,000,000 yards of heavy woolen cloth, to be made into overcoats for soldiers. For this cloth $1,150,000 will be paid to the American Woolen Company, which has already filled a Russian order for 1,500,000 yards. A ship recently started from Philadelphia with the third cargo of locomotives and rails that has left that port for Russia. The same nation bought 8000 freight cars in Pittsburgh some time ago, and has now ordered 7500 more. Having engaged 18,000 tons of steel rails from the Carnegie Steel Company, Russia is in the market for 50,000 tons.

It is asserted, apparently on good authority, that a new order for $70,000,000 worth of powder has been given to the Du Pont Powder Company. Eleven of the largest aeroplanes ever made have been ordered in Springfield, Massachusetts. It is intended that each one shall carry several tons of explosives, six men and two machine guns. An order for 3100 tons of picric acid, for which $6,200,000 will be paid, was recently placed. Since the beginning of the war, the price of this acid has been multiplied by three. The Submarine Boat Corporation is at work on fourteen boats ordered by Spain. Italy has bought 47,000,000 feet of lumber from the Southern Pine Company of Georgia, and Russia has engaged 300,000,000 feet of red oak in Arkansas, for railroad ties. To a new company, formed in New Haven, France has given a contract for about $60,000,000 worth of rifles and cartridges. An officer of the Westinghouse Electric Company says the company's orders have amounted to about $94,000,000. Among last week's contracts were one for 1,000,000 time fuses, to be made in Indiana at a cost of $2,450,000; a British order for 70,000 high explosive shells, and $7,000,000 worth of work given to the Union Switch and Signal Company. Italy and France are buying American coal.

The Fires and Explosions

Many recent fires and explosions, destroying the property of companies that are filling war orders, are believed to have been caused by persons hostile to the Allies. On the 10th, a large machine shop of the Bethlehem Steel Company was wrecked by fire, and 2100 employees were deprived of work. The loss was about $1,500,000. In the shop were 800 field guns ready for shipment. On the same day fires were discovered in three other buildings of the plant, but they were quickly extinguished. Valuable patterns and munitions were destroyed, also on the 10th, by a fire at the works of the Baldwin Locomotive Company. On the following day, fire caused a loss of $1,000,000 at the plant of the Roebling Company at Trenton, where steel wire rope is made. The company's officers say they are working on orders from our Government, and not for European belligerents. An impression had prevailed that the company had war orders. The same company suffered a loss of $1,500,000 from fire in January last. On the 10th two buildings of the Midvale Steel Company were burned, with patterns and material for a British or-

der for 3,000,000 rifles. And, one day earlier, there was a destructive explosion at the works of the Union Metallic Cartridge Company, in Bridgeport, the third of the kind in two weeks. Not long ago, Russia's warehouse for munitions at Seattle was burned, and the loss was $500,000.

The full list is a long one. Since the beginning of the war the explosions and fires in factories working on war orders have caused a loss of more than $5,000,000 worth of property and of 24 lives. Associated with them, it is commonly believed, have been the bomb explosions on ships carrying munitions from our ports. While proof of guilt is lacking, the admissions of Fay and others have convinced many that the fires and explosions at manufacturing plants where munitions were being made were not accidental.

Plots and Charges Robert Fay, Walter Scholz, Dr. Kienzle, Max Breitung and two of their associates, arrested two or three weeks ago for plotting to wreck ships carrying munitions by attaching bombs to their rudders or propellers, have been indicted in New York. The penalty for the offences named is imprisonment for ten years. It will be recalled that Fay, who said he was a lieutenant in the German army, admitted his guilt in conversation with the detectives who arrested him, and also in a statement which he signed. Breitung is a nephew of E. N. Breitung, the banker and mine-owner who bought the German steamship "Dacia" and sent her across the Atlantic with a cargo of cotton.

On the day following the indictment of these men, Alexander and Victor Gondo, who own two Hungarian papers published in Bridgeport, were arrested for seeking to extort $2000 from President Pernitzy, of the Transatlantic Trust Company. They freely admitted that they had been hired by rival bankers on the East Side in New York to attack Pernitzy and his company in their papers, and to assert that Fay and others of his kind had been paid by him, acting as an agent of the German or the Austrian Secret Service. They attempted to negotiate with Pernitzy, thinking, as one of them said, that he "might pay more." He did pay the $2000 which they demanded, but a policeman was an unseen witness of the transaction, and the arrests followed. The two men were held for the grand jury.

Two days later, Dr. Joseph Goricas, who resigned from the Austro-Hungarian consular service in December, after fifteen years' work in it, published a long statement in which he said that he had offended his Government by refusing, while he was consul at San Francisco last year, to obey Naval Attache Boetyn, who directed him to procure plans of all our fortifications on the Pacific Coast. He asserted that there were nearly 3000 German or Austrian spies in this country, controlled and directed by Naval Attache Boy-Ed, Military Attache von Papen, and the Austrian Consul General at New York, von Nuber; that the two Governments had expended many millions here in subsidizing foreign language newspapers, interfering with the manufacture and shipment of munitions, and striving to draw employees away from war order factories. The Austrian Embassy at Washington says he is not telling the truth. His charges, however, have caused an inquiry to be set on foot by the Department of Justice.

The Situation in Mexico Carranza's military leaders are planning to crush Villa, whose forces have been reduced by desertions. He is to be attacked on all sides. General Dieguez, coming up on the west coast, has captured Hermosillo. At Guaymas 6000 Carranza soldiers brought from the south by boats are preparing to join him. Another army of 5000 is moving northward from Torreon, and the large Carranza garrison at Agua Prieta is also available. Villa would like to get possession of a port on the west coast and to make his last stand there, but it is expected that the armies of Calles, Dieguez and Obregon will close in upon and overcome him. Carranza's offer of amnesty, money and free transportation to homes has led many of Villa's officers and soldiers to desert. The offer has also been effective in the south, where 3000 of Zapata's men surrendered last week. General Obregon, at Nogales, on the northern border, is negotiating with General Maytorena, a Villa commander who, it is said, may go over to Carranza.

TO BUY AMERICAN MACHINERY

Maurice Dumas, president of the Committee of Metallurgists of the French Chamber of Deputies, who has been commissioned by the French Government to buy in America machinery for the manufacture of munitions of war, in order to relieve the congestion of France's trade with Germany in the United States. France has [illegible] to manufacture shells in this country, and the commission will close [illegible]

There are conflicting reports about the condition of the capital. In a statement issued by our Government last week it was asserted that there was no longer any famine, that there was food for all, that business was improving, and that the stores were open. But agents of the Red Cross say that conditions are appalling; that women and children are starving, and that shops, hotels and restaurants are closed. The death rate, they add, is four times the normal percentage. Carranza has by decree taken the railroads from military control and restored civilian management. By another decree he has prohibited bull-fighting and cock-fighting. It is said that about two-thirds of the railway rolling stock has been lost, as a result of the wars, and that the armies have been using more than half of what is left.

There is a report that representatives of the Pacific Coast in our Congress will suggest that our Government should seek to obtain possession of Lower California and the northern part of Chihuahua and Sonora. Mexico, it is said, will need money for the satisfaction of foreign claims, and can be induced to part with these tracts of her territory, one of which includes Magdalena Bay.

The Hayti Protectorate Some time ago our new treaty or convention with Hayti was approved by a large majority in Hayti's Chamber of Deputies, but approval by the Senate was delayed. A Senate committee appointed to consider the question recommended that action be postponed. Last week, however, the Senate rejected the committee's report and ratified the treaty by a vote of 26 to 1. The agreement thus officially approved virtually establishes a United States protectorate for Hayti. It places the management of the customs revenue in the hands of American officers, provides for the counsel and aid of American experts in the general financial administration, and requires Hayti to maintain a constabulary force commanded by American officers. Its term is ten years, and it may be renewed. In December, President Wilson will ask our Senate to ratify it.

Until action is taken at Washington, our Government's course in Hayti will be in accord with the policy already shown. Our marines will control the custom houses and all the principal towns, and will be employed to patrol work elsewhere. Opposition to the Government is now confined to a few guerrilla

FROM STATE TO STATE

DELAWARE: The most important feature of the recent carnival week at Delaware City was Canal Day, devoted to speeches by United States Senator Saulsbury, ex Senator Higgins, Congressman Moore and others favoring the purchase and improvement of the Chesapeake and Delaware Canal by the United States. The project is a very old one, but now that public attention is turned toward improvement of coastal waterways for purposes of commerce and defense, it is regarded as more likely to be carried out. The canal would be a link in the proposed inner waterway along the entire Atlantic coast.

FLORIDA: After an impressive parade of hundreds of automobiles filled with Confederate veterans and their ladies and amid the cheers and "rebel yells" of thousands of spectators, the memorial to the women of the Confederacy was recently unveiled in Confederate Park, Jacksonville. As the Confederate flags which had veiled the monument were loosed several bands and the great multitude of people joined in playing and singing "Dixie." United States Senator Duncan U. Fletcher presided and the Hon. Theodore T. Turnbull, of Monticello, was the orator of the occasion.

GEORGIA: The Anti-Saloon League of Georgia, with its 882 committees, is making a vigorous campaign thruout the state for the passage of three prohibition bills which it has caused to be introduced in the present special session of the Legislature. Ex-Governor R. B. Glenn of North Carolina and a large number of other prominent prohibitionists from neighboring states are holding meetings in the larger cities. The press of the state generally seems to believe that a drastic law will be passed at this session and that it will go into effect on January 1 next.

ILLINOIS: The prison commissioners of this state have decided to employ 500 honor prisoners in the construction of the new $3,500,000 penitentiary buildings at Joliet. They say it will save a large amount of money to the state and will further the commissioners' plan to enlarge the scope of the honor system at the penitentiary. The new buildings will be erected on the 2194 acre honor farm recently purchased by the state. A part of the work will be the erection of a prison wall thirty-five feet high, upon which, when finished, no guards are to be employed.

INDIANA: The recent convention of the Indiana Teachers' Association at Indianapolis was the largest and most important gathering of school teachers ever known in the state. The hotels and boarding houses of the city were inadequate, and thousands of members were received into private homes. Every available room in the downtown section was required for the various departmental meetings. The Coliseum, the largest auditorium in the city, could not accommodate all who wished to attend the general meetings, tho it holds more than 10,000 persons. Vocational training was prominent among the subjects considered. It was reported that last year there were 120,000 students of the practical arts in the state and that of these 30,000 devoted their study to home and farm work. Miss Anna Wilson, of Crawfordsville, was elected president, the fifth woman to hold this office in the sixty-two years of the association's history.

KENTUCKY: What is known as the Black Patch, a section composed of about thirty counties in western Kentucky and Tennessee, mostly in Tennessee, furnishes the foreign markets with a large portion of their annual purchases of tobacco. The crop in that section this year is estimated at nearly 100,000,000 pounds, and the farmers do not know what they are going to do with it. The war in Europe has closed many of the best markets, and the exorbitant ocean freight rates and insurance to those that are open make the disposition of the tobacco a matter of much anxiety to the growers.

MINNESOTA: The University of Minnesota has entered an entirely new field. Graduates of the medical college are to be trained as specialists in branches of clinical medicine and surgery. For three years these graduates are to continue their studies along different lines of investigation, each then to receive a degree of doctor of science in the particular branch he has followed. This work, the first of its kind ever attempted in America, is made possible by the $1,500,000 Mayo Foundation for Medical Education and Research, which has formed an alliance with the university.

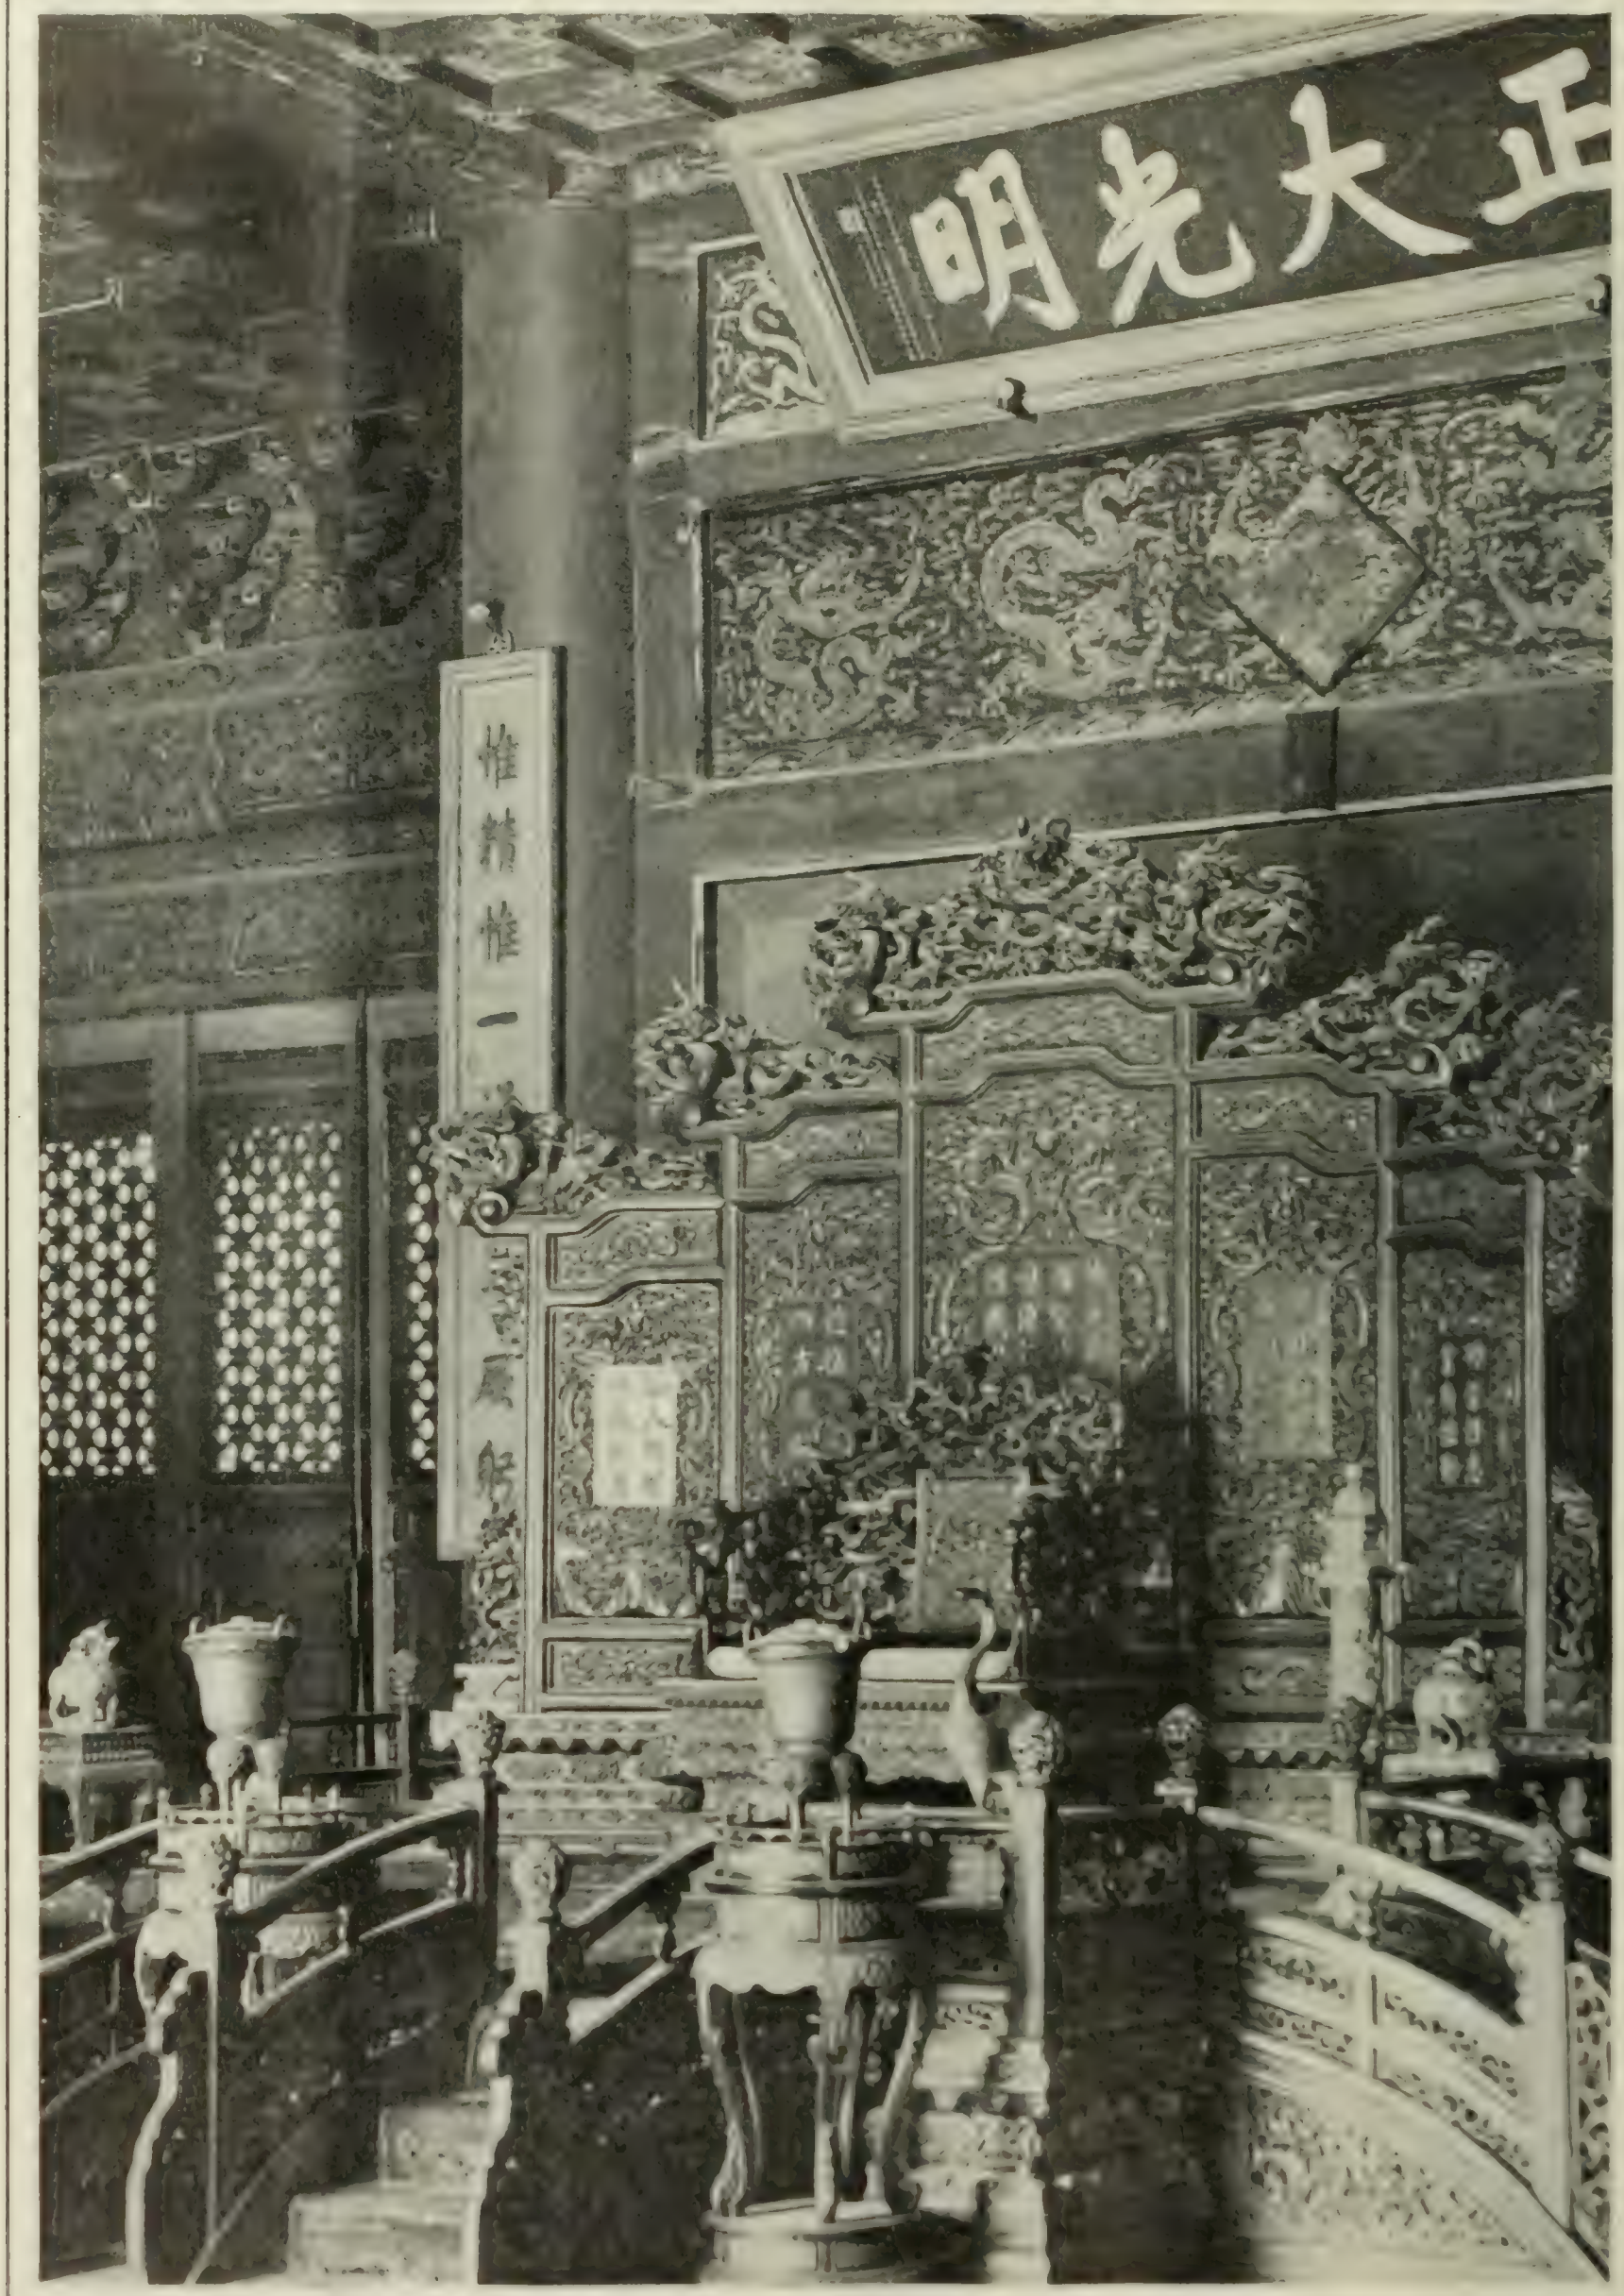
MISSISSIPPI: For having voluntarily submitted themselves to experiments made by Dr. Joseph Goldberger of the United States Public Health service in producing and curing pellagra, twelve convicts in the Mississippi state prison, seven of them under life sentences, have been pardoned by Governor Earl Brewer. Physicians say that Dr. Goldberger's success in producing the disease by means of an unbalanced diet is one of the medical triumphs of the age. Six of the patients have pellagra in pronounced form and two others show definite symptoms of it. Dr. Goldberger expects to cure them all by means of a properly balanced diet. This disease has been one of the scourges of the South.

NEVADA: As proof that prosperity is returning with a rush to this state the fact is cited that in a single day recently six articles of incorporation were filed in Reno. They were for a milling company, capital stock $500,000; a land and investment company, capital $1,000,000; a warehouse and commission company, capital $100,000; a mining company, capital $100,000; a lumber company, capital $200,000; and an agricultural and livestock company with capital stock of $5,000,000. All these corporations are to make Reno their principal place of business.

NEW YORK: The approaches to the Manhattan Bridge in New York City, which will be the most costly and in many respects the most beautiful in the United States, are so nearly completed that only about fifteen per cent of the work in Manhattan and five per cent in Brooklyn is unfinished. The bridge itself has cost the city $24,105,200. The approach on the Manhattan side, known officially as the Manhattan Plaza, which is costing $828,420.04, has turned a section of the East Side, in one of its most squalid parts, into a veritable park with strikingly beautiful adornments. A notable feature of the Brooklyn approach will be statues of Miss Manhattan and Miss Brooklyn, each twelve feet in hight, seated opposite each other at the center of the approach in front of great granite pylons. These approaches mark the most serious attempt yet made in this country to treat bridge entrances with a view to combining the artistic and the practical.

NORTH CAROLINA: At the convention of the Equal suffrage League of North Carolina recently held at Asheville, resolutions were adopted favoring the national organization and opposing the methods of the Congressional Union. It was also resolved to ask the Legislature to grant equal suffrage in the choice of presidential electors, that body being empowered to do so by a majority vote of each house without submission of the question to the people.

RHODE ISLAND: Newport has been given to understand that it must enforce the laws relating to liquor selling and gambling or cease to be a naval base. Captain Roger Welles, recent commander at the Naval Training Station there, devoted several weeks to obtaining evidence of the laxity of city officials and laid the facts before the Board of Aldermen. Then Rear Admiral Austin M. Knight, commanding the district which includes Newport, gave the warning. As a result a largely attended mass meeting of citizens formed an organization which promises to close all gambling places and stop the illicit sale of liquor.



SOUTH CAROLINA: The Southern Railway's new export coal terminal at Charleston is regarded as one of the most important improvements made in late years at that port. The coal-handling machinery, consisting of a huge car-dumper and loading tower, is operated entirely by electricity. By means of it coal can now be loaded into ships at Lapidis and as cheaply as at Charleston or at any other American port, and freight rates are such as to admit that coal operations shipping thru Charleston will be on a parity with those supporting them North.

VERMONT: [illegible] wind that recently [illegible] hundreds of state roads in cities and towns along the coast of the Gulf of Mexico, but it [illegible] a prodigious culling of trees to the Vermont state quarries. Practically every road in the state has been cleaned out in response to hurry orders from the wind-swept districts, and the quarries are all busy trying to supply the demand and restock the yards.

VIRGINIA: Six months ago Hopewell was a small tented village. Today its 30,000 inhabitants are giving it an appearance of permanence. The E. I. du Pont de Nemours Powder Company, on its 3200 acres, has already spent about $18,000,000 on its plant and residences for its employees. With the completion of its sulphuric-acid plant—the largest in the world—its outlay will have been about $25,000,000. But the new city, outside the company's reservation, extends for six miles along the narrow strip of land between the Appomatox River and the Norfolk and Western Railway line almost to Petersburg. Here tall business blocks of brick are being rushed to completion, to be occupied as stores and offices by tenants eagerly waiting for them. More than 300 substantial business enterprises and hundreds of lesser concerns are already located on the principal street. Water and sewerage systems are begun, and schoolhouses, churches, hotels and other buildings of a permanent character are being built.

WEST VIRGINIA: According to a report of the State Road Engineer, Ohio County's improved highways are not only the best in West Virginia, but are equal in extent to all the improved roads in the fifty-four other counties of the state. Out of a total of 240 miles of public highways in Ohio County, only thirty miles of clay road remain to be improved. Most of the work done is of the "penetration" or "water bound" macadam character. It is estimated that 3000 vehicles pass daily over the National road in this county, one of the finest stretches of highway in the United States.

WISCONSIN: A recent decision of the Supreme Court of this state ended a long fight to abolish justice of the peace courts in Milwaukee. In 1911 the Legislature enacted a law abolishing them, but the constitutionality of that law was questioned and the matter has been in the courts ever since. The most interesting feature of the decision is that it opens the question of the legality of every marriage performed by any of these justices since the law went into effect four years ago.

WILL YUAN OCCUPY THIS THRONE?

THE GRAND THRONE IN THE EMPEROR'S PALACE IN THE FORBIDDEN CITY IN PEKING.
IT IS SACRED TO THE "SON OF HEAVEN." YUAN DECLARES
THAT HE DOES NOT WISH TO BE EMPEROR

THE CHINESE REPUBLIC WILL STAND

BY YUAN SHIH-KAI

PRESIDENT OF THE CHINESE REPUBLIC

In view of the alarming reports now coming from the Far East that President Yuan Shih-kai is plotting the overthrow of the Chinese republic with a view of making himself emperor, we are pleased to be able to present his explicit assurance to the contrary as given in an interview with Carl von Ressingler at Peking a few weeks ago. This message to the American people was given in the form of answers to a series of questions which had been prepared in advance and had been written out for him in Chinese and English by his personal secretaries, the Honorable Li Chi-tung and Lieutenant-Colonel Semplee. The interview began at one-thirty in the morning and lasted nearly two hours. Yuan Shih-kai answered categorically the questions on the card before him, referring, when necessary, to newspaper clippings, mining reports and the Sun Yu or Confucian Analects.—THE EDITOR.

THE Republic has not been a failure. It is absolutely certain to continue. Monarchial government is as dead in China as it is in the United States, where, except ing in a very limited sense, it never existed.

I am president of China; and that means president of a Republic. I have no desire to be anything else; and I wish to continue as head of the Chinese nation only according to the wishes of those who are qualified and competent to say who shall be the official leader of the Chinese people.

I am asked to speak to the American people, and indeed for a number of reasons I am most happy to do so. First, the American people have always seemed to me to be unselfish in their interest in Chinese political affairs. They have never wanted to control our Government nor to direct our policies, tho the United States Government has often advised us as to the best course to pursue in international matters. Secondly, the American people are naturally more interested in the success of what has been termed our experiment in democracy than are other peoples; and, thirdly, the American nation, alone among the great powers, has the time and inclination to listen to a recital of China's position at this time. I gladly speak to the Government and people of the United States.

MISLEADING NEWS FROM CHINA

I am misrepresented even in the American and British press. Excerpts from the newspapers and magazines are sent me by our legations in Washington and London; and they show that there is either a wilful plan to destroy foreign confidence in Chinese democracy or that there are Chinese enemies of mine who wish to see me thrust out of the way even if they must go to the extent of re-establishing the crown.

Your journals cannot too strongly impress upon the officials and people of the United States that the assertions to the effect that I am in favor of the reëstablishment of the monarchy and that I desire to be Emperor are made by my enemies, not by my friends.

Had I continued to believe a monarchial form of government to be best for our country I would have thrown all my weight on the side of the dynasty. But I saw that a change was inevitable; that China as a monarchy was weak against internal disturbers no less than against foreign aggressors; that kingly institutions were not in keeping with progress and enlightenment. I sought, personally, the prominent members of the royal house and urged that the will of the intelligent and modernistic portions of the people demanded that a change be brought about. I arrayed myself with the forces of democracy, and democracy won. Nor am I hesitant about saying that had I stood for the old order the monarchy would not have gone so quickly or surely. A long and terrible civil war would probably have resulted.

Some of my critics, both at home and abroad, think they see in my order for the official resumption of Confucianism a reversion to all things old. Without reason they couple Confucianism and monarchism. And when they do this they betray their ignorance of the founder of our great national code of ethics; for Confucius was neither of royal blood nor favorable to royalty. He was a sincere and humble man—like the Christian Saviour; and was not in the favor of the rulers of his time.

I am a believer in Confucius—and so are you; and so are all Christian men and women, for the Great Sage taught Truth. Jesus taught Truth and humility and love. They taught the same; one on one side of the earth, the other on the other. Were they living on earth today they would be firm friends, teaching side by side, and telling men how to live.

There is no political significance in this reaffirmation of our national belief in the Great Sage, unless it might be taken that the closer knitting together of a people in morals and ethics had political significance. If the United States were to declare Christianity to be the religion of the country would that mean that the United States was committed to some special form of government? It would not so appear to me; for religion is that which concerns a man's thoughts, government regulates his conduct.

THE REPUBLIC WILL NOT FAIL

If the Republic of China should fail—and I declare now that it will not, if the decision is to rest with me and my supporters—I would repeat in lamentation the dying phrases of the Great Teacher: "Tai shan, ki tui hu!" (The great mountain is broken!) "Liang muh, ki huai hu!" (The strong beam is thrown down!) "Chi jin, ki wei hu!" (The wise man is decayed!)

It is true that there have been loud calls from some sections of the country for a return to the monarchial form; and it is equally true that as late as yesterday the Council of State advised that I issue an order for the assembling of a citizens' convention to act on a new constitution. The order will be issued. It is now being prepared, and will be sent out to all the officials within a fortnight. I expect that the convention will assemble late in December or early in January and that it will take important action. But not any of this relates to the changing of the form of government, altho I hope for many changes in the administration of certain departments and particularly as relates to the powers of the executive and to the methods of provincial elections. The question of reverting to a monarchial form may be brought up; I presume it will, and that it will be discussed earnestly and at considerable length; but there is not the remotest chance that the royalists will be in a majority.

It has been urged in certain quarters that a republic was not of a strength sufficient to cope with enemies within and without the State, and many unthinking and poorly informed people have been led to believe this. In truth China was never so well able to defend herself against internal and alien foes as at

Copyright, 1915, William F. Mannix

present. I do not mean to say that we have such foes, at least that we have any immediate fears of them; but the Republic is stronger in actually developed and potential strength than ever the monarchy was.

JAPAN'S CLAIMS EXAGGERATED

The supposed claims of Japan have been wickedly exaggerated by those who do not want to see peace exist between the two nations; and in the Western world the press has published widely that the Japanese are exerting and asserting political and commercial authority thruout China. And upon this feature I wish your journals would speak plainly, without misquoting me. Japan is not pursuing a policy of aggression with us. The Government of the Mikado is conducting all business with China thru regular channels, and in a regular, routine, diplomatic and friendly manner. That Government has made many requests since the British-Japanese occupation of Kiao-chau. Some of these requests—they were never in the nature of demands nor accompanied by threats —. have been granted, others have been refused. Still others are under diplomatic consideration.

We have received assurances from Japan that the concession of Kiao-chau, from which the Germans were ousted by Great Britain and Japan, is to be held by the two nations only until such a time as full adjustments are made of the affairs of the European nations upon the termination of the present war.

Japanese occupation of Manchuria is with our consent and with the approval of the United States, Russia and Great Britain. The maximum number of troops to be quartered in the province is 72,000; and when this number was exceeded by nearly 100,000 some months ago, we protested and the excess troops were at once withdrawn. We did not know at the time that these were extra forces held for possible service in Europe, and that their quartering in Manchuria was intended to be but temporary.

It is not true that Japan has in any sense secured control of the Central China iron mines, the iron works at Hankow, or any other mines or works within our territory outside the province of Manchuria. Nor have concessions been granted Japan or any other nation in the Shen-si and Shan-si coal fields. These fields, the most extensive and valuable in the world, are owned and will continue to be owned solely by the people of China. We have let it be known in New York, London, Paris and other large centers that we are ready to grant private or corporate concessions for the working of vast coal areas, as well as for zinc and copper mining in Yun-nan and marble quarrying in various provinces; along with railway concessions necessary for the profitable working of them; but no government, Japan or any other, has been or will be given control over China's natural resources.

While Manchuria can supply Japan and Korea with fuel for a century and a half, the Shen-si and Shan-si coal areas can keep the world warm for 2000 years. German Government engineers first surveyed the latter fields in 1886, 1887 and 1888, and in 1892 Germany made a secret offer to China to mine the coal and pay her 63 cents per ton for it, and to enter into a contract covering the life of the mines; but the offer was declined.

As for foreign military aides, a large number of Japanese drillmasters have been employed here at the capital and at Tientsin, Nanking, Shanghai and Canton in the instruction of our officers and soldiers; but as more of our own citizens become proficient the services of the foreigners are dispensed with.

Personally, as Viceroy of Shantung, and afterward as Viceroy of Chihli, I had in my service many German engineers and tacticians and some few of these still remain. A number of German as well as British officers were employed in the national forces and at the chief training school, but only a very limited number of these are now in China. I expect that within three years—five at most—there will not be a foreigner, in the strict sense, in either our army or our navy.

A CHINESE MERCHANT MARINE

I have of late months had many conferences with Chinese capitalists regarding the establishing of a Chinese merchant marine, and I may say that a number of important projects are on foot. Now that we are at last beginning to realize the tremendous extent of our natural resources and the great need for their proper development, we naturally think of becoming a commercial and manufacturing people. We are the youngest nation in natural resources.

In order to work our mines and to build our railroads we must have machinery, and in order to get our machinery without being wholly at the mercy of foreign steamship lines, we are compelled to think of the possibilities that await us on the ocean. I may say that the establishment of one or more first-class lines of ships between China and the United States is just now occupying the thought of some of our ablest men. We have capitalists who are amply able to finance such projects, and I confidently expect that within a year—secured by purchase—or within three years, if we must have them built, great vessels will fly the Chinese mercantile flag in the harbors of New York and San Francisco.

But for the European war many millions of British, Belgian and American capital would now be made use of in the furthering of new enterprises and China would be fully entered upon an era of long-postponed commercial development. I have a list of some thirty large enterprises, each of them involving the expenditure of from one to nine millions of dollars, gold, which were projected for 1915, 1916 and 1917, but which, I suppose, must now await more satisfactory world conditions. Still, we are not feeling the effects of the war as seriously as some of the other neutral nations, for we are thankfully very remote from this horrible and unnecessary butchery and waste. Both our friends and our enemies are engaged in this suicide of nations—we are sorry for all of them!

Peking

PROGRESS

BY HELEN HOYT

Does any place in the park
That we have chosen
Ever content us?
Here it is not dry,
And here it is rough,
And here it is sunny
And there too cool.
And again
It is windy
Or close to the noises.
Or that tree over yonder
Is surely more wide,
Or better secluded.
Always the next spot—
The one a little farther—
Shall be more to our liking.

It would be easier
To sit down immovable
On the first bench we come to,
Public and vulgar;
And let ingenuity rest its feet.
Why need we always
Be expecting and striving
To suit so exactly
Our over-niceness!

WHY DOES A RICH MAN WORK?

BY WILLIAM FREDERICK DIX

Mr. Dix, author, editor and financier, will be remembered by readers of The Independent as the author of several sketches of various phases of the psychology of the folk of Wall Street.—THE EDITOR

A BLIZZARD is raging in the city and the classic, columned façade of the Stock Exchange is a vague wall, blurred and indistinct behind the fierce swirls of white snow. All about it rise the lofty bank and office buildings whose upper stories are lost in the storm. In the wind-swept streets are little black specks struggling thru the snow—the busy denizens of the financial district, messengers, clerks, promoters, bankers, all muffled and indistinguishable save as tiny units, each buffeted by the elements.

Some of the puny figures, as they dodge thru a revolving door into the ornate, electrically lighted, marble hallway of one of the great buildings, reveal themselves to be wrapt in costly furs and are impressive in personality. The uniformed elevator-starters salute them respectfully. A moment ago, in the storm, in the world which Nature created, they were merely struggling human atoms. Now, in *their* world, they are dominating personalities. In a moment or so the doors of some board room or inner office will close behind them and the whole financial world will await the result of their deliberations.

The scene changes. In front of the same group of bank buildings and financial institutions the melting asphalt yields a tarry odor, the white, columned façades are blinding in the sunlight and the furnace-like air is heavy and dead. The crowds in the streets cling along the shadows of the walls, languid and enervated with the stifling air, yet prest on to ceaseless activity by some invisible goad. Within the office buildings various executive committees, boards of directors, councils of trustees, the personnel of which is composed of these same men of vast wealth and influence, are from day to day meeting in spite of the heat of mid-July, and it is seldom that a quorum is lacking.

What is the lure of the market-place, greater than the lure of foreign lands or sumptuous summer home or the fascinations of travel or sport, which so appeals to these men who are already oversated with wealth, overweighted with power? Their money, which could have purchased them the wings of freedom, surcease from the turmoil of commerce and relief from responsibility, has seemingly anchored them with golden weights to the never-ceasing round of business.

Various high-sounding explanations have been given—"the stimulating climate causes men to overwork themselves," "the restless, indomitable energy of the American," "his boundless ambition," "we are a young nation and the hot blood of youth in our veins spurs us on to constant endeavor." Absurd! Meteorologically, psychologically, physiologically and sociologically absurd!

The Englishman of large wealth properly appreciates leisure and knows how to employ it, why not the American? The American can employ Labor to the best advantage, wresting from it the maximum of effort and efficiency, he can employ Time so that every second is utilized, but as an employer of Leisure he is a decided amateur, paying the highest price, paying it grudgingly and receiving unsatisfactory returns. He realizes this and so, feeling his limitations, employs as little of it as possible.

Why? What is the generic difference between the Englishman of great wealth and the American? Comparatively few Englishmen have themselves amassed their fortunes; comparatively few American rich men have not. In England, vast landed estates have been held in the same families, under the law of entail, for centuries, given to the founder of the house by the Crown for services usually in wars of conquest. These great estates did not represent money and it took generations of cottage building and farm renting and town forming to produce the modern rent-rolls. So the inheritors of these estates, whose solicitors, managers and agents have been in practical control have for generations had opportunity to grow acquainted with the possibilities afforded by leisure, while the American has a chance at it only after the best energies in him and the best years of his life have been spent and he is disinclined to take up new things.

However, these generalities are too vague. Let us interest ourselves only in the facts.

Mr. A., who began to support himself at fifteen by being a clerk in a bank, subsequently became its president, a director in three or four railroads, vice-president of a public service system and on the executive committee of several great industrial corporations. Why? Because, in addition to fulfilling the regular duties in his bank, he had the energy to master the important features of certain great railway systems and manufacturing plants and absorb so many engineering, legal, scientific, geographical, financial and sociological details that, in comparison, the acquirement of a thoro mastery of the Greek language, with archaeology and chemistry on the side, would be, as a mental achievement, child's play. Consequently his associates found his grasp on the principles and practise of business thoro, his ideas illuminating and his advice sound. He concentrated his entire nervous and mental energies upon this vast accomplishment and keyed his whole nature to a tension where, without undue strain, the greatest results were achieved. Thru the years of progress, his associates either lagged behind or fell from exhaustion, but he was always in perfect condition, never overwearied, always intensely interested and finding a deeper and deeper fascination in the world of affairs as he learned more and more about it. His enthusiasm was that of the scientist for the constant revelations of nature's secrets. The wealth which began to roll in on him became more and more of incidental interest as his purview widened.

Gradually, for his family's sake, he acquired the accessories of wealth—town and country homes, motor cars, a box at the opera, and gradually the growing demands of his family caused him to take occasional trips abroad, to pass more and more time in his hunting preserves or his seaside villa or aboard his yacht. But always his association with these things came *after* his own interests. The years of intense concentration had left their indelible marks and mental habits were too firmly fixed to be easily changed. A morning on the golf links was, of course, a refreshing change and so was an afternoon on the awning-covered deck of his yacht. It was delightful to look out over his sunken garden and realize that all that perfectly appointed establishment was his, but after a little there really was a certain monotony in it and his thoughts would soon turn wistfully to the city, where at various directors' tables were gathering every few hours a group of his own peers, the associates which he and not his wife and daughters had chosen, the men whose minds and points of view he so well understood and admired.

There they were, discussing the most fascinating of subjects, and he

was absent! He was missing something! A railroad was perhaps about to float a new bond issue, a syndicate was forming to take over a large block of stock. Mr. X had just returned from a tour of inspection over a railroad and Mr. Y wanted to talk to him about opening European branches. These were all big things, the vital things of the world affecting the lives of uncounted thousands in various ways. Power! That was the lure, Power! Now that he had won his place, there was nothing in all the world quite so interesting to him as occupying it.

Mr. B., on the contrary, did not have to win his own way. After he left the university he found various places on boards made for him thru the influence of his father and the power of the family fortune. He was received "down town" with respect and it was flattering to be seated at the dignified council tables of these famous and efficient financiers. While he was in his twenties and thirties he found sufficient time for polo and yachting in the Mediterranean and tiger-hunting in India, but gradually his fellow sportsmen became either dissipated or lazy or bankrupt or absorbed in business. The young fellows just out of college were crowding him out of sports and those directors' meetings were really very interesting after all. His fortune was not "landed," as in England, and his investments required not only regular attention but knowledge and skill and all that did not come to him on the Riviera or in Florida. So gradually the world of affairs absorbs him and the world of leisure knows him less and less.

These are two representative cases. There are of course many variations from them, but they will suffice. One does not expect the famous portrait painter to throw down his brushes as he grows older and declare that now that he has won fortune he will enjoy himself. He does enjoy himself when he is in his studio as nowhere else in the world. As the twig is bent so is the tree inclined. Nature demands her payments for everything she gives. Prestige in any walk of life must be bought at the expense of a lessening interest in other walks.

That is why the rich man works when he does not have to. It is not, save in exceptional cases, avarice and a desire for more money. It is for the same reason that a literary man always finds his chief delight in his study and the artist at his canvas. While a man is sturdy and sane, why should he not work? And in comparison with the narrowing influence of some of the arts, these alert, well-poised men of affairs are remarkably well rounded. Many are patrons of the arts, others are discriminating travelers or amateur sportsmen, but all these interests are merely *avocations*, relegated to the background of their activities.

Always, as a mother returns rapturously to her young children, the homing instinct is strong and when vacation is over they return to their work with new zest. The railroads, banks and corporations which absorb them are the children of their enterprise and energy, and so the lure of the market place is not that of mere money, but is primal in its origin and wholly normal and right. It is the appeal of Work to the man-soul.

New York City

IS SALONICA SAFE?

BY ELON JESSUP

Mr. Jessup was a member of the Columbia Relief Exposition which went to Serbia in the summer to aid in the distribution of supplies and farm implements. "The Independent" has already published, on October 25, an article on "Barbarous Serbia," by Palmer Smith, also one of the party, which recently returned.—THE EDITOR.

NEWSPAPER reports of the Allies having been received in Salonica amid loud acclamation are not altogether convincing to one who has recently been in that particular section of Greece. It seems to be rather generally overlooked that what Greece permits for the sake of continued existence as a nation and what she feels are quite different. For Greece, while not particularly pro-German has gradually grown distinctly anti-English, a fact so patent to the traveler that one wonders at the confidence that England has seemingly placed in her.

With Greece it has been a question of immediate commercial advantage rather than the family ties of the King, and Salonica has played a leading part in this policy.

Early last August, while on a Greek steamer running from Pireus to Salonica, I was witness to an example of the mutual feeling of distrust that has grown up between Greece and England. Some miles off Salonica the ship was stopped by an English war vessel, while its manifest and cargo was examined for contraband. "Why," I asked, "is it necessary to examine the cargo of a Greek ship running from one Greek port to another?" The answer, at once evasive and direct was, "Turkey has been receiving all the supplies she needs and German submarines have had no trouble in obtaining oil."

We arrived in Salonica on docks piled high with boxed aeroplanes, motor trucks and equally large cases mysteriously devoid of markings. Into a city of strange types and varied nationalities we plunged; Greeks, Turks, Bulgars, Serbs, English, Russians, even Japanese were in its streets. Then we saw Salonica for what it was: a city entirely devoid of a national spirit, but the great trading port of the near East. And those large cases on the docks, consigned to many different countries, as well as the general atmosphere of prosperity told us why Salonica wished to keep out of the war.

For centuries, Salonica has been a seat of turmoil and conflicting interests and will probably continue to be as long as there is a Balkan question. Directly after the Balkan war the great Turkish hinterland trade was cut off and the city entered a period of depression. At the same time living expenses advanced and a new Greek tariff of 40 per cent was imposed in place of the old Turkish tariff of 15 per cent. The Greeks made creditable attempts to install an efficient city government. But in spite of all that they have accomplished or attempted, the city is not Greek in any sense and Greek rule has not been popular.

Before the present war the Salonica shippers and merchants, nearly all of whom are Jews, held Greece responsible for the great falling off in their trade. For instance, an export duty of 77 cents on every 2.81 pounds of opium, one of Salonica's principal exports, had been imposed and had a most disastrous effect upon the trade. An undercurrent of discontent was sweeping the city and its hinterland.

Then the Great War broke upon

the world and Salonica entered upon a period of prosperity such as it had never known. The Venizelos party started an active political campaign for joining the Allies. Salonica gave its answer by electing its entire deputy body in opposition to Venizelos. An elaborate German propoganda involving the expenditure of several hundred thousands of dollars may have had its effects, but the real voice was that of the merchants looking toward a continuance of their new found prosperity. They realized that such could be enjoyed only by keeping Salonica an open neutral port; they were not interested in the territorial dreams of Greece; they were not interested in the German proclivities of the King.

Then England took a hand in Salonica's commerce. Turkey was receiving supplies from some unknown source and German submarines were establishing bases and receiving oil. England would leave no stone unturned in cutting off the supplies. An iron band was placed around Greek shipping. All boats entering Salonica were carefully examined and if contraband of any kind were found the ship was taken to the English base, Mudros, and held until the validity of the reputed destination of the contraband was established beyond doubt. In fact these searches were so thoro that England's ally Serbia was often placed at a considerable disadvantage in the matter of receiving supplies. In addition, practically all oil in the Salonica warehouses was under the absolute control of the British Consul.

As a result of ships being held for days, and in some cases for weeks, the Greek steamship companies and merchants suffered heavy losses. Wherever possible the steamship companies made up their losses by taxing the cargoes. Many shipments to Serbia have been subject to such a tax. An anti-British feeling crept in and gradually grew in intensity. In Salonica we were accepted as English. Nothing was said, but there was no mistaking the furtive glances cast in our direction.

That anti-British feeling is to be reckoned with.

"PASS, FRIENDS!" GREEK SENTRIES PERMITTING BRITISH SOLDIERS TO CROSS A BRIDGE NEAR SALONICA

AT WAR IN THE TYROL

FEATURED HORIZONTALLY THE MOVEMENTS OF TROOPS ON THE FIGHTING FRONTIER ARE ALMOST AS RIGHT AS IN THE FRENCH TRENCHES IN FRANCE, BUT VERTICALLY MUCH STEEPER AND ACCORDINGLY FURNISH PROMINENT PEAKS

THE EFFICIENT OPTIMIST

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

THE first idea to be drilled into the mind, heart, soul and body of every human being is the firm assurance:

"You Can!"

These two words are the biggest in the language. Everybody needs to hear them told, powerfully and often. They should be engraved and illumined above the door of every home, school, church, hospital, factory, forge and shop in America.

The greatest favor to be rendered any man is to tell him how much he can do, and how best he may do it. This is the problem of health, of labor, of marriage, of education, of religion, of culture, of character. And Optimism offers the solution.

The power of the Universe is locked in every human mind. Our first duty is to find, release and use this power. Great men are great only because they have explored and revealed their own minds. They have achieved this, without exception, because of their conviction that they could do some one thing supremely well.

Great men are always optimists. They believe in themselves, their work, their mission, their destiny. Even such orotund pessimists as Carlyle, Schopenhauer and Nietzsche were incorrigible optimists as to their own wiseness.

There is a science of optimism—and it is not safe to be an optimist until you have learned the science. If you are a natural optimist, born that way, you should at once denaturize yourself by marrying a pessimist, or taking one as partner, or hiring one as personal adviser. The reason for such precaution lies in the fact that a natural optimist is generally a natural fool.

Because of this deplorable fact, I have little use for merely hereditary optimists. Like poets, they should be heard and not seen. To see one is to become violently discouraged as to the future of the race. To make any man a pessimist, shut him up in the house with an optimist.

There are depths of anxiety, perplexity, want, despair, along the road that every one must travel who aims at a far, high goal. Not to evade these, but to emerge with strength renewed, hope established and sympathy enlarged, is the ideal for an optimist who deserves the name. Convictions are the only sure foundations for ambitions. And to follow your convictions means, often, hell. The test of your faith is how long you can stand on it against the world.

Many people have a notion that an optimist is a cheerful, happy go lucky sort of person, empty of cares, burdens or problems, smooth and sleek and well fed, favored of gods and men. Believe it not! All the real optimists I know have been thru battles, worries, woes, privations, that would tear the heart out of an ordinary man a hundred times over. Not the man who always smiles is the optimist, but the man who can always turn frowns and tears into smiles! The consciousness that everything must finally come right is not born in a moment; we must first consciously do the thing we know to be right, thousands of times, and must watch ourselves gain a step of ground each time, before we can form the habit of trusting the rightness of the cosmic plan. The days of blind faith are over, the days of intelligent action are here. An efficient optimist hopes entirely without reason, but works entirely with it.

Analyze the requisites for your own work, and thus command your own future. Doubtless you possess a longing, dream or wish to have, do or be some particular thing worth while. Are you a blind and lazy pessimist, fearful of yourself and too weak to look your own wish in the face? Are you a superficial optimist, drunk with your dream and hoping in a vague way that some kind fairy will waft you by magic to the Land of Heart's Desire? Or are you a scientific optimist, hoping with your heart while planning with your head and working with your hands?

Every position of trust to which we aspire will demand certain specific traits and forces—mental, physical and moral. To learn what these will be, then to acquire them, is the initial step to scientific advancement. To become an optimist one must know how he can advance; to remain an optimist, one must know he *is* advancing. We enjoy only what we have earned. Our habits of earning depend most on where and how and why we toil. Hence, in laying the foundation for a lifelong optimism, one of the first moves is to consult the leaders in our chosen trade or profession, and to organize the physical, mental and spiritual forces in ourselves that the leaders in our field think necessary.

A thing done well is never done easily. What place do you want to reach—what price are you willing to pay? The place is always there for him who gives the price. How much do we want a thing? Enough to work for it, wait for it, weep and starve and bleed for it, give up the world for it, go thru despair for it? Then we shall have it. And until then, if it is a boon worth having, we should not be able to use it.

How does optimism aid efficiency? By renewing, refreshing, sustaining and strengthening our bodily physique, mental constitution, moral character and psychic reserve. The path to any great success is lined with many small failures; and the assurance of ultimate success lies in the perception to see and the power to use the lessons from these failures and to go higher because of them. This perception and this power come only to the optimist.

The world was against Newton when he proclaimed the law of gravitation; against Harvey when he discovered the circulation of the blood; against Wagner when he wrote his epics of harmony; against Franklin when he searched the skies for the secret of electricity; against Darwin when he announced the law of evolution; against Bell when he made the first telephone; against the Wrights when they labored on the airship; against Burbank when he dared to invent new species of plants and flowers; against Froebel when he taught how to understand children better. These men all had to create in themselves an optimism strong enough to carry them thru and beyond the world's ignorance, blindness, inertness, fear, hate, opposition. And the law still holds. The greater your work and the finer your message, the more you will be antagonized. Your only safeguard is in scientific optimism.

What does scientific optimism do for the human machine? It promotes good digestion and a corresponding sense of buoyancy and cheer; it straightens the backbone, physical and moral; it assures deep breathing and the liberation of more energy; it favors sound sleep and repose at all times; it lends force, clearness and alertness to the brain because of a purer blood stream and a surer life purpose; it empowers the will by enlargement and establishment of one's faith: it steadies the nerves for a calm, firm handling of the crises, problems and duties of everyday life; it provides the key to a storehouse of moral dynamics, available only when we see, think, believe and hope for the best; it expands our influence and

makes hosts of friends; it opens communication with higher, spiritual avenues of original conception and power, by means of which the ordinary man becomes great, and every man a conscious master of himself, his work, and his destiny.

The charm and beauty of optimism is that every one may acquire it. No matter how poor, weak, ill, sad, forlorn we may be, we can all become optimists, and in doing so can finally change the worst conditions into the best. How? For answer, let me state a few of the rules in the science of optimism, by means of which hundreds of pessimists, including myself, were taught to think and act sanely and effectively.

1. Stop grumbling, whining, pining, worrying, pitying yourself. Get busy. Do something, anything, to shake you out of the frozen rut of regret.

2. Look around you and see how much worse off other people are—and how much better they are behaving. Study the lives of the world's heroic figures, then observe how small your troubles are, and surmount them.

3. Find a purpose big enough, and make a will strong enough, to carry you up and over mountains of difficulty.

4. Hold *yourself* entirely responsible, not anything nor anybody else, for the troubles and trials that come upon you. They are the results of your past mistakes, to be borne wisely and bravely; or they are the means to your present development, to be studied calmly and utilized fully. Weeping at misfortune only blinds one to its mission, and blaming something or somebody only weakens one when he should be strongest.

5. Analyze each loss, pain, perplexity or hardship, saying to yourself, "What can this teach me, how can it develop me?" When sorrow ends in strength, sorrow becomes joy.

6. Exercize, work and play out of doors all you can. The muscle of an athlete seldom goes with the mind of a worrier. The pessimist is always a negative person, and the cultivation of physical power tends to cure pessimism. The "blues" leave the brain as red blood pours in.

7. Build up your digestion. Much pessimistic thought is merely autointoxication, or a stagnant condition of arteries and nerves due to a lazy liver, weak stomach, or overtaxed kidneys. A man weak in food science is almost sure to be weak in faith.

8. Learn which of your mental faculties are naturally dull or defective, use modern methods to sharpen and strengthen them. A person weak in the faculty of hope, or of caution, or of economy, or of self-esteem, or of continuity, or of any of a dozen more faculties of the mind, will have occasion to grieve much and often; but mostly on account of his own folly.

9. Study books that teach the art of happiness, and the cure of illness, poverty, oppression, sadness, fear, confusion, doubt. The mind needs tonics far more than the body does. And an optimistic writer is doctor, nurse and druggist for an ailing mind. Of course, the Bible is the best manual of optimism ever given to the world. But there are a few modern books that teach the modern science of optimism, in a modern way, to fit modern conditions. Every home, church and school should contain some of these, and every man or woman who hopes to do great things should take such a book for a constant companion.

10. Make yourself smile, whether you feel like it or not. We enjoy looking at our picture because the photographer made us "look pleasant"; and to look pleasant long enough is to feel pleasant. All tragedy borders on smiles; don't plunge so deep into tragedy, play a little more around the edges. We have millions of years in which to become strong and wise and great; should any happening of a moment rob us of our poise?

11. Don't be ashamed to cry. There are depths of disappointment and grief when nothing but a great flood of tears will sweep the mass of wo from the valleys of our minds, and reveal again the path to the hights.

12. Lift some other fellow's burden—and you will find that your own has fallen off, or at least you carry it more easily. Self-absorption is the root of pessimism; dig out the root and the branch withers. Failures in optimism are always failures in altruism.

Scientific optimism is faith in self, God and man; plus knowledge of material conditions required for the attainment of a specified goal; plus will to work long and hard, and use every means and event, good or ill, for the transmutation of experience into achievement. The lever with which to move the world is an irrepressible faith, grounded on irrefutable knowledge, backed by an irremovable will. Have you this faith, Have you this knowledge? Have you this will?

New York City

TEST FOR EFFICIENT OPTIMISM

DIRECTIONS. Write numeral 5 in blank space at left when answer is affirmative. Leave space blank for negative answer. Add column of numerals for your approximate grade in right use of optimism.

1. Is your will unbreakable, your faith invincible?
2. Have you learned to give in, without giving up?
3. Are you glad to be told of your mistakes?
4. Do you rectify all mistakes as far and fast as possible?
5. Can you smile at losses, abuses and disappointments—while in the midst of them?
6. Do you believe we always get just what we deserve?
7. Do you know why you haven't succeeded as fully as you hoped to?
8. Can you see how your greatest present trouble can be turned to advantage?
9. Could you be happy if all your friends deserted you?
10. Are you familiar with at least five books on the nature, acquisition and preservation of optimism?
11. Can you name at least five great modern optimists, and show how their optimism adds to their efficiency?
12. Have you kept the faith, romance and idealism of your early youth?
13. Have you also acquired caution, system, economy, tact, shrewdness, accuracy, patience, responsibility?
14. Are you determined to be and do the best there is in your line of work?
15. Can you make fun of your own peculiarities, and enjoy a good joke on yourself?
16. Have you formed an advisory partnership with a pessimist?
17. When you are pessimistic, do you always diagnose yourself and learn what physical or mental weakness is to blame?
18. Are you helping to make your friends and neighbors optimists?
19. Do you believe in quiet, rather than verbose, optimism?
20. Is your final ambition unselfish?

Add column of figures and learn how efficient you are as an optimist (grade should be at least 100).

DEMOCRACY IN PALESTINE

BY LOUIS D. BRANDEIS

This account of one of the most courageous national experiments ever undertaken was given by Mr. Brandeis, with whose work as a tireless advocate of efficient democracy "Independent" readers are familiar, in an address recently made in Washington.—THE EDITOR.

WITH a spirit like that of the Pilgrims of Plymouth Rock the Jewish Pilgrim Fathers turned a generation ago to Palestine, and began to establish those settlements called colonies, thru which Zionism is becoming a reality.

To avoid misunderstanding, let me say at the outset what Zionism is and particularly what it is not.

First: It is not a movement to transport all the Jews in the world to Palestine. That, indeed, would be impossible, for there are 14,000,000 Jews in the world, and Palestine could not accommodate more than one-fifth of the number.

Second: It is not a movement compulsorily to transport a single Jew to Palestine.

Third: Neither is it a movement to wrest the sovereignty of Palestine from the Turkish Government. Zionism is a movement to give the Jews a home in the land of their fathers, where the Jewish life may be lived normally and naturally, and where the Jews may in time hope to constitute a majority of the population and look forward to what we have come to call Home Rule.

The Jewish Pilgrim Fathers a generation ago took the first active steps to convert the dream of Zion into a reality. They were a small body of Russian and Rumanian Jews. They felt that the longing that had animated the Jews during centuries of exile was a longing of deep significance which represented the struggle for life of an ancient and gifted people, the struggle of a people who could again do for the world things as great and glorious as they had done in the past, when they gave to the world its great religions, and largely its system of morals.

The first years of these Jewish settlers resembled the first few years of the Pilgrim Fathers at Plymouth. They had to fight death and disease. Misgovernment of the country had brought malaria into it. The land appeared to be exhausted, and they knew not how to enrich and till it. Many died; and those who survived lived only to be confronted by obstacle after obstacle; but they succeeded at the end of twenty-five years in establishing the two great propositions upon which practical Zionism rests: (1) that Palestine is fit for the modern Jew, and (2) that the modern Jew is fit for Palestine.

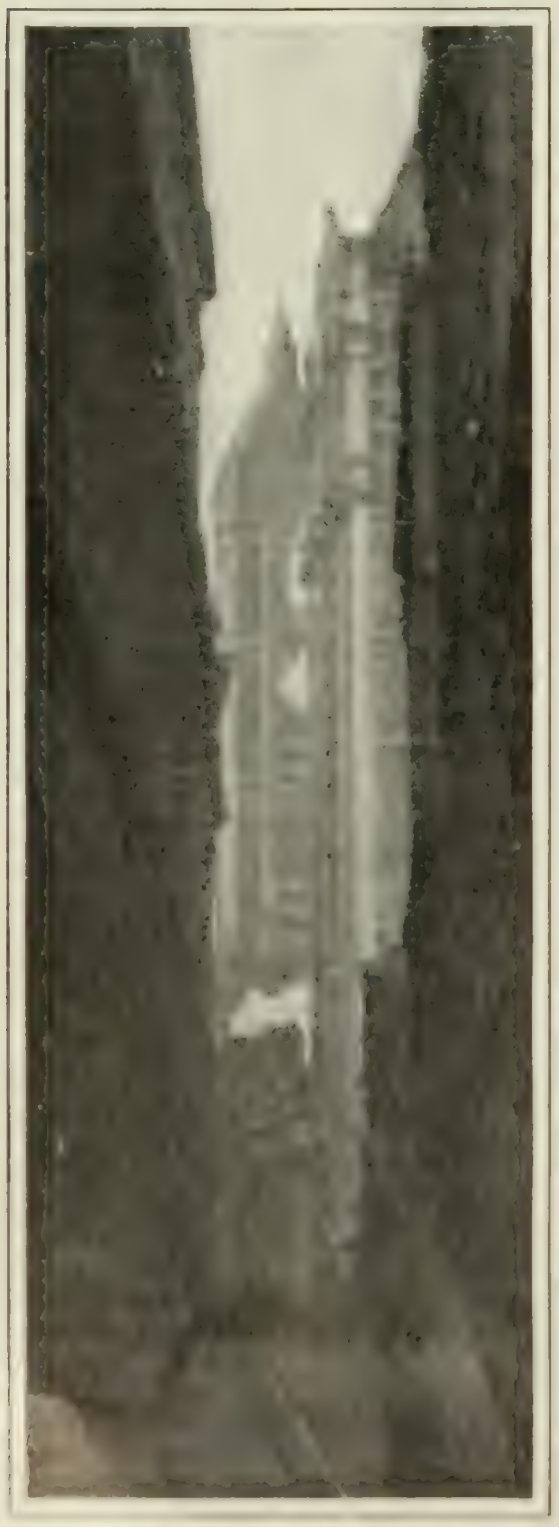
Then came the revival of the Hebrew language. We have long thought of Hebrew as a dead language, like the Greek and Latin; but it has come to life. A great part of the Jews in Palestine speak it today as their ordinary language of intercourse. They have developed this language of the Old Testament so that all conceptions of modern philosophy, economics, politics, science may be exprest in Hebrew. It has become the language of the instruction in the schools, the language of the press and of the platform.

Education has ever been treasured by the Jewish people. Civilization without education is inconceivable to them. And so they have established a school system almost complete. But for this war, it would have been capped with the establishment of the first department of the University of Jerusalem—the medical department. The war interrupted that forward step, and also the opening of the Institute of Technology at Haifa. But before the war there had been established high schools in which were fitted not only Jews of Palestine, but hundreds who came from Russia and Rumania, so thoroly that they could enter on equal terms with the European students any of the great universities of Austria, Germany and France. In their self-governing colonies, over forty in number, ranging in population from a few families to some 2000, these Jews have pure democracy, and since those self-governing colonies were establishing a true democracy, they gave women equal rights with men, without so much as a doubt on the part of any settler. And women contributed, like the men, not only in the toil of that which is narrowly called the home, but in the solution of broader difficult problems.

Among the problems which they undertook to solve is one with which we have been particularly concerned this last year—the problem of unemployment. The prosperity of the Palestine colonies had depended largely upon its export trade. When the war came, their trade practically ceased, because the export markets were closed to them. It ceased wholly later because, when Turkey entered the war, it prohibited all exports. This stoppage of trade naturally brought on unemployment. The Zionists undertook to find employment for those who had lost their jobs. In part they did this by going on courageously with public works, with road building and drainage work, with the construction of a public hospital and similar undertakings. That helped some. They suggested that the farmers look ahead and do upon their farms work that would add ultimately to the value of these farms. That took care of a large part of the workmen in the country districts. But there were many unemployed Jewish workmen in the cities, which had been growing incident to the growth of the colonies. They therefore undertook to the extent of their available funds to lend money to the industries which were relatively large employers of labor, to the end that those for whom they held themselves responsible should not be put in the position of takers of charity. To this end those who had steady jobs suffered their salaries to be cut one-third, one-fourth, and in some cases even more, and those who had not steady jobs were enabled to work at least part of the time under a fair distribution of that work which it was possible to provide for them.

In other fields likewise Zionists have undertaken functions which governments should assume — but generally do not. Among their institutions is the Palestine office, so-called, an exalted information bureau and intelligence office for the prospective settler, which helps to place him in his new home with the minimum of self-sacrifice and suffering on his part—which acts in many ways as friend and adviser of the Jewish inhabitants in the land of their fathers.

I was talking not long ago with one of the men who went as a pioneer to Palestine. He referred in discussion to another Palestinian, and as a word of severest censure he said: "Yes, he is a Zionist, but, he thinks of his own interests first. That is all right in other countries, but in Palestine it is all wrong." And as he spoke he made me think of the words which Mazzini uttered when entering Rome in 1849: "In Rome we may not be moral mediocrities." That is the feeling of the Palestinian Pilgrim Fathers. That should be the feeling of their brethren thruout the world, when they think of their great inheritance, of their glorious past—the mirror of the future.



Washington, D. C.

THE WORLD OVER

Banishing Skyscrapers

A temple-like, white stone structure, with a big park for a front yard, is the most unusual of Kansas City's new business buildings. It tops a high hill beside Penn Valley Park fully a mile and a half from the business center of the city. For a time the builder kept mum about the purpose of his temple and Kansas City amused itself trying to guess whether the building was to be a residence, a bath house or a church. All guessed wrong. It is an insurance office.

"You would expect to find my offices in a downtown skyscraper," the owner observes. "The reasons why you don't are various, but the most important one is efficiency. Most of my business can be transacted by mail and telephone. Under these circumstances, I felt we might as well work in good surroundings as in bad."

DOWNTOWN, NEW YORK

Looking North on Broadway, showing the Singer Building, a tall tower, and the Woolworth Building, a still taller tower, in the distance

It wasn't a necessity for Bruce Dodson to stay cooped up in a skyscraper in the center of town; so he decided to get out where there was more elbow room and fresher air.

"I work better here and so do all of my employees," he says. "I believe that the increase in efficiency in a year will be not less than 5 per cent, and I will practically get my rent free. We have a cork slab roof for insulation from summer heat and are as cool here as the tenants in the middle stories of skyscrapers. There will be less sickness, for we get better air and more exercise than the folks downtown. We make use of the park at noon and after working hours; play tennis, if we like; there are good courts just across the road in the park, and our office equipment includes shower baths.

"Most of our business can be done by mail, and we find that we actually get our mail half an hour sooner than the skyscrapers do. A new branch postoffice near us is the explanation.

"Selfish motives were first in my mind -efficiency. My choice was a business man's choice. I don't lay claim to altruism, tho some element of that, perhaps, got mixed in. At least, the men and women who work with me tell me they take personal pride in this sort of institution and are glad to be part of it. Like me, they appear to take more zest in life and to work with more energy and interest in these surroundings than in cramped quarters downtown."

FOUR CARLOADS IN ONE

A single rotary kiln consigned to a cement plant in California was so large that it required four flat cars to carry the huge cylinder. It is 120 feet long and twelve feet in diameter, and weighs 149,000 pounds. The kiln was constructed in Wilkes-Barre, Pa., and it is claimed that it is the largest single piece of freight ever sent overland for such a distance, approximately 4000 miles. Very carefully planned loading methods were required to place the long tube on the flat cars in such a way that the curves of the road could be negotiated, and this was accomplished by a system of swivels which took the weight, and allowed the cars considerable freedom of motion under the rigid burden

The Deepest Well

A well is being drilled fifteen miles west of Pittsburgh which will break the world's record for depth, at present held by a well in Upper Silesia, Germany. It is a mile and a half deep and has afforded opportunity for most interesting temperature measurements. At a depth of 6775 feet the temperature was determined with great accuracy to be 146 degrees Fahrenheit, and at the full depth it is doubtless still hotter.

Gas and oil were struck in the upper part of this well, but it ended in rocks bearing rock salt and salt water of the same strata that carry the rock salt beds of western New York. Several wells over a mile deep have been drilled in the oil regions near Pittsburgh.

The Michigan Million

As the years go by our colleges and universities are more and more getting away from the clique system and are becoming humanized. There seems to be a rising tendency among both students and instructors toward the realization that college is after all only a means to an end; that the end is life and that the ant who lived under the cabbage leaf and swore the sky was green is a type to be avoided in connection with the college production.

The University of Michigan has in its midst an organization which is called the Michigan Union. It lives now in a small private house and is used every day in the year and many times each day as a sort of "melting pot" where rich men meet poor and where students from all parts of the country and from all walks in life may meet on a social basis in an enhancement of their education, which is not available in the college curriculum proper.

Having proved that the idea is a success, through ten years of happy experimentation, the alumni of Michigan have now set for themselves the task of collecting one million dollars with which they are going to build and endow a structure which will properly house the social idea which has grown so naturally in their midst. There are 20,000 graduates of the University of Michigan and there is small doubt that their loyalty and devotion will make this project a reality. The alumni are organized in 183 cities and the Michigan Union Building which is to be erected from the fund will be a home for the visiting alumni, as well as a meeting place for the student body. It is to be a

memorial to Dr James B Angell, the well-beloved president emeritus of the University of Michigan, who a number of years ago, and far ahead of his time, made the statement that "young men in college can learn as much from one another as they do from their professors."

A New Experiment with Truancy

The Superintendent of the Jefferson Farm School at Watertown, New York, is a woman who has been brave enough to undertake to manage the most incorrigible "school runaways." For Mrs. Eugene H. Bunce believes that if you cure laziness you cure truancy, and she puts her theory into practise by the ruling that "Every boy must have some duty outside the house and some duty inside the house, as well as his regular school duties."

Rotation of occupations is the rule. For instance, one boy is responsible for all care of the hens and chickens. But after he has learned that business he is assigned a new duty on the farm, and his first assistant helper in the hen-house is promoted. The boy's new work may be that of assistant silo-maker outside the house, and chief-bed-maker inside.

Sandy Creek runs across this farm. There is good fishing there and a swimming pool. One boy teaches another to swim; and they all have to learn; that is a rule of the school.

When a "new" boy comes, he is put, unconsciously, under the surveillance of the boys who have been in the school longer. Seldom is there any truancy in this truant school.

The boys made their own baseball suits this year and organized several teams. After the baseball season was over they harvested eighteen hundred heads of cabbage, forty bushels of turnips, five hundred bushels of mangel-wurtzel beets, forty bushels of table beets, thirty bushels of carrots, and several tons of oats, which were put in the barns and threshed.

The canning season is a busy time. The cherries, berries, peas, string beans, corn, and tomatoes are prepared by the boys, for their use during the winter.

Last spring the boy who had charge of the garden trucks and his helpers set out five hundred strawberry plants, two hundred raspberry plants, and two hundred blackberry bushes.

In many cases, after the older boys leave the truant school they take up dairying, stock-raising or market-gardening. If it is discovered that a boy has more of an inclination for the trades and mechanics, the Superintendent assists him, when he leaves, to find a place where he can follow these vocations.

There is a regular school routine, the same as in a public school. Necessarily the boys are "ungraded" when they come to the school, and, usually, have fallen behind their grades. Accordingly the plan of individual instruction has to be followed in many cases. Classroom instruction is given in all the elementary branches, including reading, penmanship, spelling, grammar, composition, hygiene, arithmetic, geography, history and current events. The winter evenings are devoted to discussions of current topics and to supplementary reading of stories from the best literature.

The most humanitarian methods of discipline are used. No boy is ever shut up or deprived of his liberty. The school is organized on the principle of self-government. Bodies and minds are properly nourished. Pupils are taught if we are to realize our ideals the first step necessary is to idealize our reals.

THESE BOYS WILL KNOW HOW TO MAKE A FARM PAY

NO NEED FOR TRUANCY—THE CURRICULUM INCLUDES FISHIN'

S. O. S. on Land

A truck which receives messages by wireless telegraph while it is running at full speed is the novel outfit of the Electrical Commission of Baltimore. This car is used in maintaining the conduits of the city's system, and it is of the greatest importance that it should be in touch with the central office at all times, as in case of emergency it might be necessary to call the crew from work in one part of town and send it on a "hurry call" to another.

The wireless was tried as a solution of this problem, and the difficulty of setting up masts for the aerials was done away with by the simple method of stringing the wires under the roof of the truck. Forty-five wires, spaced about an inch apart, are placed thus, quite out of the way and in a safe position from weather and accidents.

It was a matter of doubt whether the machine could receive messages in the city streets while running from one job to another, and this was settled by thoro tests, which proved that within a ten-mile radius of the central station the messages were received with unfailing accuracy, the high steel buildings in the center of the city having no effect upon the wireless.

In order to avoid the expense of carrying an expert operator, the regular code was discarded and a system of simple signals was devised instead, which can be easily mastered by the crew. No sending apparatus is carried on the truck, as the receiving of orders from headquarters is all that is required. The apparatus is similar to that carried on merchant vessels.

Try this easy way to clear your skin with Resinol Soap

Bathe your face for several minutes with Resinol Soap and warm water, working the creamy lather into the skin gently with the finger tips. Then wash off with more Resinol Soap and warm water, finishing with a dash of cold water to close the pores.

Do this once or twice a day, and you will be astonished how quickly the healing, antiseptic Resinol medication soothes and cleanses the pores, removes pimples and blackheads, and leaves the complexion clear, fresh and velvety.

If the skin is in bad condition through neglect or an unwise use of cosmetics, apply a little Resinol Ointment and let it remain on ten minutes before the final washing with Resinol Soap.

Resinol Soap is sold by all druggists and dealers in toilet goods. For a trial size cake and miniature box of Resinol Ointment, write Dept. 10-G, Resinol, Baltimore, Md.

Resinol Shaving Stick also contains the Resinol *balsams, making it most agreeable to men with tender faces. Trial on request.*

Don't Wear a Truss

BROOKS' APPLIANCE, the modern scientific invention, the wonderful new discovery that relieves rupture will be sent on trial. No obnoxious springs or pads. Has automatic Air Cushions. Binds and draws the broken parts together as you would a broken limb. No salves. No lies. Durable, cheap. **Sent on trial to prove it.** Protected by U. S. patents. Catalogue and measure blanks mailed free. Send name and address today.

C. E. BROOKS, 1952 State St., Marshall, Mich.

HISTORY TEACHERS

How to Use The Independent in the Teaching of History

[illegible] the name of a new pamphlet just received all enquiries. It was written by Harold Evans Beattie, M.A., Head of the Department of History, Plainfield High School, Plainfield, New Jersey.

It contains the substance of the address delivered before the National Association of the United States and Maryland at their New York Conference.

Send for this pamphlet. It is free and your sending for it will not obligate you.

THE INDEPENDENT

How to Exercise for Health

Over-exercise is almost as dangerous as no exercise. This is why you should have scientific instruction for exercising healthfully. Such instruction you find in "Winjum's Manual of Physical Exercises"—the most complete book of its kind ever published. *Nearly 300 illustrations.* Every muscle, movement and position of the human body shown. Study of this book enables you to develop your muscles evenly, building your body into a splendid bulwark of health. Prof. Winjum was for years Director of Physical Training at the great Battle Creek Sanitarium—where scientific health exercise has reached its highest development. Prof. Winjum explains everything so clearly—and his book is so fully illustrated that anyone can understand and follow its instructions at home. No expensive apparatus required. You could not possibly find a better or safer guide than this book. Over 400 pages, with many diagrams and charts. Price, cloth bound $2 *postpaid to the U. S.* Order today. You take no risk. If not entirely satisfied, return the book at once for prompt refund. Send order to—

111 W. Main St. Battle Creek, Mich.

The New Books

A BOYCOTT AGAINST MILITARISM

Norman Angell, the brilliant journalist-philosopher who almost counts as a separate international peace party in himself, has endeavored in his most recent volume, *The World's Highway*, to vindicate his economic pacifism against the attacks to which the coming of the Great War has subjected it, to expound the dangers of guarding against such an imperialist adventure as Germany's by armed "preparedness," and to outline what he considers a more effective method of defense. He repeats in this volume his earlier thesis that territorial expansion for the sake of economic advantage is a great illusion," and that "the citizens of a little state like Sweden, or Switzerland, without political power, without colonies, having enjoyed no conquest, are by every real test of well being, moral or material, as well off as the citizens of great military empires that have spent blood and treasure immeasurable upon securing their 'place in the sun.'" But he insists that he has never contended that the illusory character of imperialist aims would prevent war. So far from wars being impossible, as many critics have charged him with saying, he maintains that they are probable, indeed almost inevitable, while present misconceptions hold sway in the chancelleries of Europe.

Since Germany has gone to war because of the false hopes and fears which Norman Angell has devoted his life to dispel, the reader may well expect him to be favorable to the cause of the Allies. And so he is, tho his partizanship is so far from being blind that more than once in the book he has stated the real case for Germany far more ably than we remember to have seen it stated by any German apologist. "Prussianism" is to Norman Angell a contagious disease. Germany did not always have it, and any of the allied nations may have it tomorrow. He quotes from a number of British, French, Italian and American journalists whom the long continued strain of the Great War has converted to a belief in the omnipotence of the state, the glory of war, and the necessity of ruthlessness. "A country at war," he maintains, "is led by an almost mechanical process to adopt the very morality that it set about to fight." He feels best the very defeat of Prussia may mean the moral conquest of Europe and the world.

But, while fearing the reaction of a great struggle even upon the victors, Norman Angell recognizes the neces-

sity of some form of resistance to aggression. He finds his substitute for war in the declaration of an absolute boycott against a nation disobeying the orders of an international court by all the other nations, big or little, thruout the world. No nation, in his opinion, could long resist the moral and material pressure of complete isolation from its neighbors. Applying the remedy to the present situation, he contends that America should break off all peaceful relations with Germany instead of entering the war against her or continuing a neutrality which is little more than nominal. He believes that true neutrality is impossible under modern conditions, since either the imposition of an embargo upon munitions of war or the failure to do so will assist one belligerent or the other to victory. This being so, why should not the neutral nations recognize the fact and do openly and frankly what the naval supremacy of Great Britain is compelling them to do in part, namely, to place the breaker of the world's peace under a general interdict? The questions raised in *The World's Highway* are of vital importance, especially to Americans, and should receive that full popular discussion for which the author pleads.

The World's Highway, by Norman Angell (Ralph Norman Angell Lane). New York: Geo. H. Doran Co. $1.50.

JOURNALISTIC LITERATURE

When English teachers generally awaken to the fact that our magazines and newspapers are publishing prose as much worthy of the consideration of their students as the "standard literature" of past generations, there will be a revival of interest in their classes and a greater efficiency in their teaching. The schools of journalism are doing a good service to English education by directing attention to some of the better examples of such writing and putting them in a form convenient for class use. Two such volumes are before us, very different in scope and character. The first of these, *Writing of Today*, is prepared by Professor J. W. Cunliffe and Dr. G. L. Lomer, of the School of Journalism of Columbia University. It contains 125 articles, many of them of considerable length, selected from the best magazines and newspapers of the United States and England. They include descriptive and narrative articles, personal sketches and editorials, humorous controversial articles and criticism of literature, drama, music and art, most of them published within the last two years. Besides its use in schools it makes very interesting reading for anybody. In running over the pages one is delighted to recognize, like the face of a friend in a crowd, some article which he read when it first appeared in the periodical and remembers because it struck him as uncommonly good.

The Independent, we are proud to see, is well represented. Perhaps our readers would like to know what articles have been picked out from The Independent as "models of journalistic prose." There is first Alexander Stod-

James McCutcheon & Co.

And When You Do, Select the Best

From a Copley Print, Copyright by Curtis & Cameron

KING ARTHUR'S ROUND TABLE, ONE OF THE SUPERB SERIES OF COPLEY COLOR PRINTS FROM EDWIN A. ABBEY'S CELEBRATED HOLY GRAIL FRIEZE IN THE BOSTON PUBLIC LIBRARY

COPYRIGHT BY EDWIN A. ABBEY

The Copley Prints The Copley Color Prints The Copley Etchings

represent the highest development in art reproduction. For gifts or for framing for your own walls the Copley Prints are unsurpassed. Augustus Saint Gaudens, the famous sculptor, says: "They are fine in quality." Edwin A. Abbey says: "I could not wish better." Everyone who knows the Copley Prints gives them unqualified praise.

Make Your Own Selections at Home

FOR the convenience of readers of The Independent, we have arranged to send for inspection, any of the Copley Prints which they may select from our new and complete illustrated catalogue. This little volume is practically a Handbook of American Art, with description and beautiful reproductions of many of the famous masterpieces from which the Copley Prints are made. Send 25 cents in stamps and the book will reach you promptly. This amount will be deducted from your first purchase.

When you have studied the catalogue and decided what you would like to see, send us your list and we will send you the prints, to be paid for if you are thoroughly satisfied. Retain those you wish to purchase, send us the proper amount, and return those that you do not want. We believe that Independent readers will welcome this plan of leisurely Christmas shopping at home—at no expense except for the pictures actually purchased. Use the coupon attached.

Your Old Family Portraits

may now be privately reproduced in the beautiful Copley Prints, daguerreotypes, tintypes, old photographs. Doubtless every reader of The Independent has an old picture of his Grandfather or other ancestors, of which other members of the family would like to have copies. There could be no more acceptable gift for your relatives, for weddings, birthdays, Christmas and family celebrations. An old portrait injured or destroved by fire is gone forever. In the form of Copley Prints they may be preserved in permanent form and duplicated at will. Check the coupon if you wish prices and samples

dart's vivid sketch of the inside workings of a newspaper office, "Telling the Story of the Titanic," from our issue of May 2, 1912, which the London *Times* in its review mentions as one of the best in the book. The other selections from The Independent are, "Motorizing America," by Bronson Batchelor (March 1, 1915); "Benedict XV Political Pope," by Salvatore Cortesi (October 12, 1914); "The Problem of Living Things," by John Burroughs (October 2, 1913); "On Keeping a Barometer" (October 19, 1914), and "The Justice and Desirability of Woman Suffrage" (April 5, 1915).

Typical Newspaper Stories, by H. F. Harrington, of the School of Journalism of the University of Kansas, begins, unconventionally but very properly, with the personal item in the country paper, a field to which this school of journalism has devoted special attention. Some practise in this humble branch of literature might well supplement the study of Addison and Scott in our schools. Then follows a series of classified "stories" with critical comment, telegrams, "human interest," athletics, war correspondence, interviews, features, etc., among them a chapter devoted to a difficult branch of the reporter's art, the description of crowds. Religion is absent, so is engineering and invention, science represented by one chicken story. In this respect the volume is an all too faithful representation of the American newspaper.

Writing of Today, by J. W. Cunliffe and G. R. Lomer. The Century Co. $1.50. *Typical Newspaper Stories*, by H. F. Harrington. Boston: Ginn & Co. $1.60.

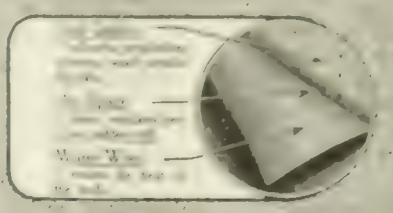
THE NATION'S LIBRARY

"The Nation's Library" starts out with five excellent volumes that ought to remain within hailing distance of the current thought for a few years at least. They are all written by men who can speak authoritatively in their respective fields; they are well written and well printed. The series is obviously a reprint of an English series, many of the announced authors being members of various Royal Societies, and most of the others well-known British men of science. But most of the books will be as valuable in this country as anywhere else.

Eugenics, by Edgar Schuster. *Education*, by Thistleton Mark. *Principles of Evolution*, by Joseph McCabe. *Socialism and Syndicalism*, by Philip Snowden. *The Star World*, by A. C. de la Cromelin. Baltimore: Warwick & York. 40 cents each.

NATURALIST AND CITIZEN

The life of *Spencer Fullerton Baird*, one of our greatest naturalists and head of the Smithsonian Institution, deserved to be written, and by such a junior naturalist as Dr. Dall. Born 1823, dying 1887, he was the friend of Agassiz, and the able organizer of scientific activities. His special study was of fish, and to him we owe the Fish Commission. This biography is not a record of explorations nor of technical investigations, but rather of his relation to the magnificent collections and scientific work of the Smithsonian Institution, the National Museum at Wash-



Winter colds are mostly your own fault

You get overheated, then sit in a draft or go outdoors without the proper protection.

(Don't think that bundling up in heavy clothing prevents exposure—it only makes you more sensitive to cold. Real protection is *proper* underwear next to your body.)

Duofold Underwear

keeps you warm and dry and comfortable indoors and out, active or at rest.

Duofold is two fabrics—cotton and wool—knitted together with air-space between.

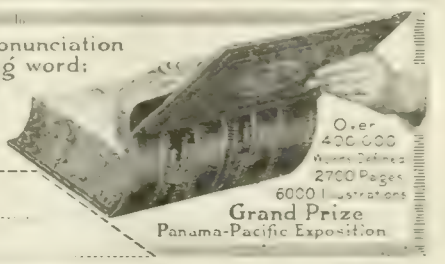
The soft fine cotton prevents or absorbs excessive perspiration and is comfortable—non-irritating to the skin.

The air-space ventilates and dries all moisture quickly—the underwear never feels hot or moist like wool, or clammy-cold like cotton.

Duofold maintains the natural heat of the body under all conditions. You stay warm and comfortable. And if you get overheated, you stay warm while your skin is drying, and you don't take cold.

Duofold is half the weight of ordinary woolen underwear and doesn't scratch as wool does. Doesn't shrink, either.

For all the family. Duofold is made in Union Suits and two-piece suits for Men, Women and Children; in several weights, too.



Write for a free sample of Duofold fabric; see for yourself why Duofold promotes health and comfort.

Duofold Health Underwear Co., 61 Elizabeth St., Mohawk, N. Y.

SCIENTIFIC AMERICAN

ESTABLISHED 1845

MUNN & CO. INC.

WOOLWORTH BUILDING 233 BROADWAY, NEW YORK

Dear Mr. Executive:

It is your desire to conduct your business in a manner that will result in the greatest efficiency. You cannot neglect any aid that will seem to suggest new ideas or inform you what industrial developments are being made by other manufacturers. The Scientific American is designed to render this service, and the big men of our country are reading it. In many industrial establishments, after being placed on the desk of the Executive, it is passed among the heads of departments, and several copies are often subscribed for in order that the employees may have access to it.

In many of our public Libraries it is more read than any other publication, not even excluding magazines of fiction. This is the only journal devoted exclusively to this field of work, and as it is a weekly publication it announces new developments before they can appear elsewhere. If it is of value to others, both for its contents and as an advertising medium, would it not be of value to you? One important suggestion or idea gathered from its columns may be worth more to you than the cost of a subscription for a life time.

Yours faithfully,

Munn & Co.

LYON

Pocono Manor

OPEN ALL THE YEAR

(Pocono Summit Station, D. L. & W. R. R.)

That belated vacation,—take it among the hills and streams at Pocono Manor.

That short Fall or Winter rest,—try a fortnight in retreat, on that 800-acre tract, with the "Quakers at the Manor," comfort without ostentation. Golf, tennis and garage, no bar or dancing.

J. W. HURLEY, Manager

ington, the National Fish Commission and the laboratory at Woods Hole, where all the younger zoölogists have studied the fauna of the sea. For years Professor Baird received his salary from the Smithsonian and not from the Government; and when the Fish Commission was authorized by Congress, at Professor Baird's suggestion it was provided that the commission should select as secretary a specialist who was a civil officer and without additional salary and he served for many years at an annual expense to himself.

Spencer Fullerton Baird, by William H. Dall. Philadelphia: J. B. Lippincott Co. $3.50.

TOURNAMENT AND TROUBADOUR

War as practised by Sir Walter the Wizard and by his army of blithe followers seems never a grave or unpleasant business. Short swords and jousting spears indeed are mild weapons compared with those we are now wonted to. So that Mary Johnston's lively romance of the honest rulers and honest men of Albi with whom were intertwined the *Fortunes of Garin*, crusader and minstrel, is nearly as far as Faery Land from the morning's paper. It is good to meet once more those perennial characters, the worldly churchman, the wise lady of the manor, the beloved ruler, the loyal townsfolk, the dishonorable foe, the dauntless, unknown champion, and not often do they move in a happier setting than this of Southern France in the days of the Crusades.

The Fortunes of Garin, by Mary Johnston. Houghton, Mifflin Co. $1.40.

EIGHTEENTH CENTURY PRAGMATISTS

The *Open Court* publishes a short volume of *Selections from the Scottish Philosophy of Common Sense* with an introduction by Professor G. A. Johnston, of Glasgow. The scepticism of the great Scottish philosopher Hume aroused his fellow-countrymen some time before Kant had entered the field to confute it, and the attempts of Thomas Reid and other Scotchmen to find a refuge in the certainties of experience from Hume's destructive philosophy resulted in the formation of a distinct and important philosophic school. Most of the discussions in the volume would now come rather under the head of psychology than of philosophy, but they date from a time when the only fully fledged sciences were the physical and all the sciences which deal with man were yet in the hospitable incubator of philosophy.

Selections from the Scottish Philosophy of Common Sense, by G. A. Johnston. Chicago: Open Court Publishing Co. $1.25.

EMERSON

Professor O. W. Firkins has a distinct advantage over every other biographer of *Ralph Waldo Emerson* in that he has been able to draw freely upon the Journals of the great philosopher which have been recently given to the public. The development of Emerson's character, his tendencies and antecedents, his life history, are narrated

with a keenness of insight and a clarity of expression that are a pleasure in themselves.

In the latter portion of the book Emerson's work is taken up in detail and subjected to searching critical analysis under such heads as Epigram, Condensation, Floridity. His philosophy is treated in the same way until by the time one has finished this volume one might boast of being on familiar terms with Emerson even tho one had never read a line of his work. The author's style is so clean cut, his sense of proportion and grasp of his subject so complete that there is never a tedious moment from cover to cover.

Ralph Waldo Emerson, by O. W. Firkins. Houghton, Mifflin Co. $1.75.

WHERE DAYS ARE STIRRING

"'Good God,' he groaned. 'What's to be done?' 'Fight,' I said." And fight they did. But that was a mere detail in *Wings of Danger*, by Arthur A. Nelson, a story of high adventure in South Africa, where adventure still is daily diet.

McBride, Nast. $1.35.

FOR BUYERS: CIVIC AND DOMESTIC

Since the average American workman spends forty-five per cent of his income for food, a book like *The Cost of Living*, by Walter E. Clark, ought to be useful to a majority of housekeepers, as well as to the social economists for whom it was written.

Chicago: McClurg. 50 cents.

FASHIONS

The Art and Ethics of Dress, by Eva Olney Farnsworth, emphasizes the very sensible idea that forms should be clothed instead of modified by the dress of either man or woman. There are hints as to the choice of color and material to suit different occasions and complexions.

San Francisco: Elder. $1.

RATIONALIZING MYSTICISM

In *The Magic of Experience* H. Stanley Redgrove seeks to make a contribution to the theory of knowledge in terms intelligible to the general reader. His method unites the idealism of Berkeley, the utilitarianism of Mill, and the mysticism of Boehme and Swedenborg.

Dutton. $1.

ANTI-DRINK BUT NOT DRY

It is not necessary for a temperance book to be dull or maudlin. Vance Thompson has proved it in his *Drink and Be Sober*. He talks straight and hits the mark. He begins by exploding the literary prestige of alcohol and ends with a plea for national prohibition.

Moffat, Yard. $1.

NATURE ALLUSIONS IN BIBLE LITERATURE

Many shades of meaning and touches of beauty in the imaginative literature of the ancient Hebrews are only clearly apprehended when the passages are interpreted in the light of the nature surroundings of their authors. Laura H. Wild's *Geographic Influences in Old Testament Masterpieces* gives valuable help, showing these in their native atmosphere.

Ginn. $1.

DEAF CHILDREN AND BLIND

The world is full of matters of importance of which most of us know little and think less. Margaret Prescott Montague's *Closed Doors*, stories of an asylum for blind and deaf children, stories in which bubbling humor softens the unavoidable pathos, has therefore a mission. It will fulfil this mission all the better because the author is an artist, not a writer of tracts.

Houghton Mifflin. $1.

THE PLAYS OF THE YEAR

"Covering articles and illustrations concerning the stage and its players in the periodicals of America and England—to which is added a record of books of the

Add 40 cents for Canada. 60 cents for foreign. IND.

15 cents a copy

drama and of texts of plays published during 1914" is the foreword of *The Dramatic Index for 1914*, edited by Frederick Winthrop Faxon, which lists for us plays, players and playwrights, with all the comments thereon.

Boston Book Company. $2.

THE PATH TO PEACE

Is it right to question the divine order of the world? The writer of *They Who Question* answers that questioning may broaden and deepen the experience of life, but ultimate satisfaction is found only in a trustful recognition of the righteous constitution of things and happy will he be if his search ends in religious faith. The story is an uneventful tale of English life, but is told with grace and ease that holds the attention from beginning to end.

Macmillan. $1.35.

THEN AND NOW

The contrast between the empire of Napoleon III and the French Republic of today is strikingly enforced when one turns from the daily reports of French tenacity and victory to the course of events in the war of 1870. Mr. George Hooper's *Campaign of Sedan* tells the story of that collapse of armies and empire before the German onslaught, and is well worth reading in conjunction with the progress of the present campaign in northeastern France.

Doran. 50 cents.

THE MEDICI AND SAVONAROLA IN ROMANCE

The Carnival of Florence, by Marjorie Bowen, well known for her historical novels, suffers as does all the work of this author from lack of human interest. The struggle between the Medici and Savonarola is well pictured, but it leaves one cold. The author has taken a photograph which is in many ways remarkable for its clarity and color, but she has not painted a moving picture of life in the period she has chosen as a setting.

Dutton. $1.35

CHESTERTONIAN RIME

Poems, by Gilbert Keith Chesterton, show all of the faults and all of the merits of his earlier verse collected in "The Wild Knight." Only one of the longer poems, the magnificent battle picture "Lepanto," shows the conscientiousness of the good craftsman. But everywhere, scattered at random like jewels in a rubbish heap, are haunting lines and striking images, which prove Chesterton to be among the most genuine of modern poets.

Lane. $1.25

BISHOPS AND PEASANTS

George A. Birmingham, in private life Canon James O. Hannay, in a volume of charming short stories entitled *Pleasant Days* tells of West of Ireland and its people. And whether the story is of impish Minnie or of "Sonny" whose real name was Michael Antony, and who went to America, or of the pig of the Georgidys in Inishbee it is told with unfailing gayety, and sympathy for the author loves his people at whom he gently laughs.

Doran. $1.25

A WAR SURGEON

In spite of many ethical drawbacks war surgery made great progress during the first years of civil strife in this country. Among the contributing factors in carrying on this work Surgeon John H. Brinton had high rank. His *Personal Memoirs* relate impartially to the experiences, trials, rules and triumphs of his career as an army surgeon. The style is simple and direct and the volume is interesting in the personal anecdotes and vivid descriptions.

Neale. $1.

EPISCOPACY

Whatever differences of understanding [illegible] and writers of the Protestant Episcopal Church cannot do better than to attend to the work of Dean Charles Hodges of the Cambridge Episcopal Theological School upon the [illegible] by stating the authentic Anglican attitude upon the points which are [illegible] and upon which the Church [illegible]. The Bible, the Prayer Book, the Sacraments, the Creeds, the

TEACHERS OF CURRENT EVENTS

We quote here a letter just received from the Head of History of a large Southern High School:

"I feel my [illegible] in your own Events using [illegible] and [illegible] you [illegible] [illegible] and [illegible] [illegible] [illegible]

Church and other subjects are discussed with great clarity, simplicity and understanding.

Macmillan. $1.25.

FOR THE AMBITIOUS BOY

Through College on Nothing a Year is the story of a successful four year struggle at Princeton. It was told to Christian Gauss in the college vernacular, which he has preserved in the tale. It gives useful hints to a young man who desires an education and is willing to work for it, but fortunately does not minimize the difficulties on this rocky road to learning.

Scribner. $1.

CONTEMPORARY COLLEGES

The American College, by Isaac Sharpless, President of Haverford College, is a compact and illuminating discussion of the problem and methods of administration in the American college of the present day. No one could read the book without coming to a clear understanding of what the college, particularly the small college independent of any university, is trying to accomplish and in what manner it fulfils its task.

Doubleday, Page. 60 cents.

THE ISRAELITES

The *History of the Hebrews* in its political, social and religious aspects as revealed by the modern study of the Bible and contemporary history and archaeology is set forth by President Frank K. Sanders of Washburn College in a small volume especially valuable for Sunday school and other classes that desire to get a well-authenticated view of Israel's development and contribution to world civilization.

Scribner. $1.

FORESHORTENED PHILOSOPHY

A History of Philosophy, by Clement C. J. Webb, is a bold undertaking even for the Home University Library, for within the compass of one small volume has to be comprest the thought of the western world from the time of Thales to the present day. The treatment of the various schools of philosophy is accurate and, well proportioned, and we are pleased to see that Christian theology is given its proper place as an integral part of the history of philosophy.

Holt. 50 cents.

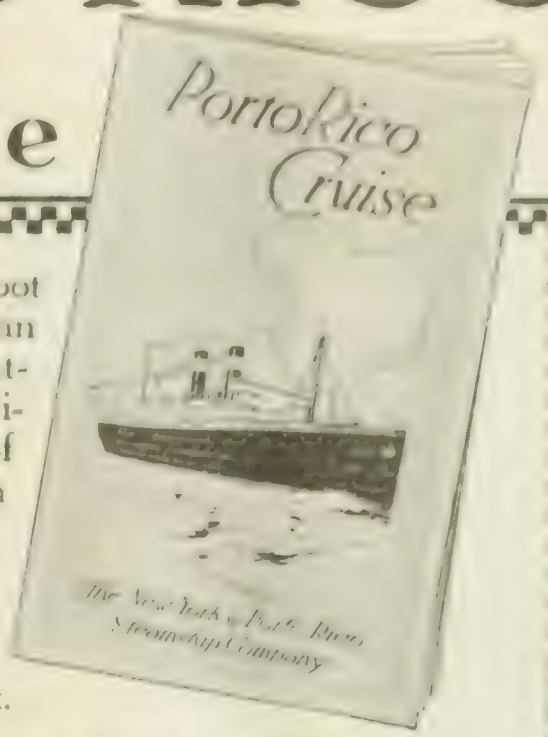
BACK NORTH WI' ME

A certain amount of enthusiasm is to be expected in S. Hall Young's account of his *Alaska Days with John Muir*. It was his privilege to explore that land of glaciers with a great naturalist and a rare man. But his sentimentality and flowery phrases are poor mediums of expression for good material, which even a shade of virility might have transformed into an interesting tribute to the memory of John Muir.

Revell. $1.

ALL FOR A HUSBAND

The inclusion of Henri Bernstein's *The Thief* was almost inevitable in a representative series of modern plays like that of the Drama League. While not ranking in a literary way with the work of Brieux, Hervieu, or Donnay, it is even more characteristic of the "well made play," so closely associated with the modern French theater. The theme of the woman who steals to buy clothes in order to keep her husband's love is handled with rare technical skill.



Doubleday, Page. 75 cents.

CLASSICS IN ART

This superb work, *The Art Treasures of Great Britain*, edited by C. H. Collins Baker, with its wealth of masterpieces reproduced in photogravure and in colors, might well be called "Landmarks of Sure Art" or perhaps "A Gallery of Honor"; for a more admirably selected group of permanent achievements in art it is difficult to imagine. The Parthenon Frieze, the K'ang H'si Vase, Millais' "Blind Girl," Turner's "Ship Aground," pictures, drawings, sculpture, ceramics, metalwork, ivorys, fifty-six subjects in all, each one a gem of its kind and class; here, indeed, is a treasure chest.

Dutton. $5.

Porto Rico
The Ideal 16 Day Cruise

THERE is no lovelier spot for a winter's outing than this Island of Enchantment—unique in the traditions and atmosphere of four centuries of Spanish rule. It has a climate softer and more delightful than that of the Riviera or Southern California—a charm which few can resist.

$94.50 and up

Which covers every expense for the entire cruise

Big steamers "Carolina," "Brazos," and others are especially designed and luxuriously fitted for service in the tropics. You make the steamer your hotel during the entire trip from New York to and around the island, touching at principal ports and returning again to New York. A sailing every Saturday at noon.

Write for this beautifully illustrated free booklet, "Porto Rico Cruise," which tells in a most absorbing way the pleasures of this voyage. Just fill out the coupon and mail it to

PINE TREE INN

LAKEHURST, NEW JERSEY

An exceptional place for Autumn, Winter and Early Spring. Now open.

ALBERT A. LE ROY, Prop.

The GLEN SPRINGS

Watkins Glen on Seneca Lake, N. Y.
Wm. E. Leffingwell, Pres.

OPEN ALL THE YEAR

A Mineral Springs Cure and Hotel, known as **THE AMERICAN NAUHEIM** from having first introduced into this country the Schott treatment for heart disease. The treatment methods, and equipment embrace the best that advanced medical science has approved. Treatments are given under the direction of physicians. Two of the Drinking Springs are highly Radioactive.

THE BATHS

THE BATHING SPRINGS are similar to the waters of Bad Nauheim, but about five times as strong. THE RADIUM EMANATION FROM BRINE SPRING NO. 2 AVERAGES 64.8 MACHE UNITS PER LITER OF WATER, or nearly three times as much as any other American Spring known. For the treatment of RHEUMATISM, GOUT, DIABETES, OBESITY, NEURITIS, NEURALGIA, ANAEMIA, DISEASES OF THE DIGESTIVE SYSTEM AND LIVER, HEART AND CIRCULATORY SYSTEM, KIDNEY DISEASE, AND DISORDERS OF THE NERVOUS SYSTEM, we offer advantages unsurpassed in this country or Europe.

Situated in a private park with miles of well-built and graded walks for Oertel Hill Climbing exercise. Well-kept Golf Course. Tennis Courts, Clock Golf and Miniature Golf. Music, Dancing.

Our Illustrated Booklets and Latest Reports on our Mineral Springs will be Mailed on Request

You Say—"I WILL"

YOU have ambition. What you need *now* is the grit-your-teeth determination to say, "I will." "I *will* get out of the rut; I *will* learn more; I *will* earn more."

Man, when you make up your mind to be *well* paid, to be a *success*, no power on earth can keep you down. *All that you need is training.*

If you can read and write, the International Correspondence Schools will do the rest. It has helped thousands and thousands of men in your very circumstances to "*get up*," to *hold* good jobs, to *make* good money.

Lift up your head, throw out your chest and say, "I will." Now, prove your mettle by marking and mailing this coupon *now*. Before turning this page—say, again, "I will"—and mean it. *Mail the coupon NOW.*

INDEPENDENT OPINIONS

In an editorial note of October 4 we ventured the suggestion that the college professor might well consider how it is that the football coach gets more work out of the students than himself. A correspondent objects to the analogy:

The football coach makes up his team with the sole end in view of winning games. The good of the individual, everything, is lost sight of in the search for the one who will fill one position best.

The object of a college training, on the other hand, is the good of the individual entirely regardless of whether some one else might do his tasks better. Bowdoin will always be proud of her "Class of 1825," but the college that develops year after year, from fair material, classes that make satisfactory advancement is doing a work well worth while.

Not a few colleges apply the football method to their freshmen, probably throwing out many young men who might have profited greatly by a college course.

A college training ought not to be limited to those who show ability to get into the "intellectual football squad," but it ought to be for those who will respond to opportunity, even tho they fall below a football standard. The great college is not the one whose graduates are all geniuses, but the one that records a fair development of its individual students with a small percentage of loss of material.

W. E. ATKINSON

Grand Rapids, Michigan

This is the old dilemma, perhaps never to be settled, of whether the college should devote itself to the cultivation of the exceptional or the elevation of the average. Some institutions are trying to solve it by dividing the student body into two classes; "honor" students who, like the football squad, receive the special training that they alone are capable of taking, and "pass" students, who take the ordinary course as the non-athlete receives the usual gymnasium exercizes for his own benefit without expecting to attain distinction.

Dr. David S. Schaff, whose knowledge of church history few scholars can equal, and who, speaking of football, played on Yale's first Varsity team, called attention to the fact that twice before in the history of the world has the epithet of "the Barbarians" been applied to the Germans as it is today by the British press and that in both cases it turned out that those who were called "Barbarians" turned out to be the true promoters of civilization.

This method of disparagement, the employment of opprobrious names for a great nation, is adapted to bring to remembrance the two other periods at which the German peoples were called "the Barbarians," the period in which the fall of the Roman Empire of the West occurred, 476, and the period of the Renaissance closing with the first years of the Reformation. In these two historic eras the periods culminated in two epochs from which important world movements are dated. It may be that the present period in which this byword has been freely used will also culminate in an epoch from which new movements will be dated in the history of national relationships.

Fifteen centuries ago, when Goth, Visigoth, Lombard, Alani and other German tribes descended upon the Roman Empire, the term "the Barbarians" was used chiefly as an expression of dread, tho the older idea of peoples destitute of culture was not absent. The older Christian writers had held that when Rome fell, the world would fall. Not so, however, did Augustine and Salvianus and Orosius in the fifth century represent the historic situation. The ground which they took was that the corruptions of Christian Rome had provoked the punishments of God, who chose as the executors of His wrath the peoples from the north. And wild as was the Saxon, inhuman as was the Goth and faithless as was the Frank, yet—to follow Salvianus—these warriors were not so depraved as were the wealthy Christians of Rome, who added to natural vices the excesses of civilization. And Orosius added that the desolations perpetrated by the Germanic leaders might prove a providential measure for a later regeneration of Christian society.

In fact, as a result of this invasion of "the Barbarians" came freedom to the papacy from the domination of the Eastern emperors and the establishment of the mediæval empire with the German, Charlemagne, as the founder. Even before 476, when Odoacer gave to the Western empire its death-blow, the barbaric Germans had settled in England and a hundred years later missionaries sent by Gregory I. landed in England to give them the Roman type of Church government. And a century or two later Boniface, descended from "the Barbarians," went from England to Germany to do the same for that land that Augustine of Canterbury and his successors had done for Britain.

In the period of the Renaissance, "the Barbarians" was again a term in habitual use among the cultivated men of the south for the Germans. Petrarch, speaking of Prag, represents it as on the borders of a large barbaric area, and Aeneas Sylvius, later Pius II, dwells at length upon the ignorance and rudeness of "the Barbarians." Their princes, he said, cared more for their horses and dogs than for poets and scholars, and loved their wine-cellars more than the muses, a thing which may well have been true. Campanus, made bishop by Aeneas, abused Germany for its dirt, sour wine and miserable food, lamented his unfortunate nose which had to take in so many smells and praised his ears which took in nothing. So the term "Barbarian" once more had its run. But the most distinguished English historian of the Renaissance has chosen to speak "of an enervation at that period of Italian society in worse than heathen vices," certainly about as bad a characterization as was the description of rude conquerors of the peoples north of the Alps. But from "the Barbarians" there again proceeds good things—the printing press and the scheme of popular education, as also Reuchlin with his Hebrew scholarship and Erasmus with his Greek New Testament and Luther with his German Bible.

Whatever the predictions may be of the abiding results following this war, no good can come from blackening by a bad name the reputation of a great people with a long historic past behind them, and it is not a thing incredible that the history of the past may repeat itself in some blessings to mankind yet to be conferred by those who are now called "Barbarians."

Mitchell Tower

An important point in regard to the organization of the public school system is raised in the following letter:

Human inertia, conservatism, the tendency to preserve existing institutions is nowhere more in evidence than in the retention of the supervisory system in the public schools. Originally, when educational facilities were very meagre, the theory underlying supervision probably was that the supervising teacher might help the young, inexperienced, and poorly equipped teacher. As the public school system expanded, the supervisory feature became fixed, partly for the reason just given, and partly because some regular form of organization being thought necessary, the familiar industrial and military type was used as a model, somewhat unconsciously, perhaps, or at least without recognition of the evil result.

If, however, a rational basis for supervision once existed it has been eliminated by changed conditions. Now, there are adequate facilities for the proper education of teachers, or if there are not, they may easily be enlarged. Now there are definite requirements which the prospective teacher must meet before receiving an appointment. If these requirements are not sufficiently high, they may be increased, the standard may be raised. At present the teacher is often better prepared for her particular line of work than the supervisor who inspects her teaching, and who is receiving a salary from two to five times as great as the better equipped teacher. A supervisor now often inspects the work in a dozen different subjects, each teacher having specialized in his or her subject. This is certainly true in the High Schools, and probably to a great extent in the elementary as well.

The supervisory system tends to repress initiative in teacher and pupil, and develop in them the habit of accepting suggestions and requirements without thinking or reasoning about them, thus preventing the highest development of the individual which must come through useful social expression. It tends to create a teaching level of mediocre uniformity, and to cause school work to degenerate into spiritless routine drudgery. By repressing socially directed self-expression of the individual, this system withholds from the state a potential dynamic force vitally important, and indispensable in the attainment of ideal Democracy.

The supervisory system is cumbersome, expensive, undemocratic, unethical. Surely a school system subject to such an indictment should be abolished. ALICE DAVIS.

Wadleigh High School, New York

Here is true kindness! The Director of the Yeatman High School not only sends back to us, at his own expense, two stamps that he has not been able to use, but suggests a plan by which such losses of return postage may be avoided:

More than a year ago, if I remember rightly, you published an editorial relative to the progressive work being done by Postmaster-General Burleson, and you indicated that a plan to prevent the loss of postage on unreturned self-addressed and stamped return envelopes was under consideration.

To illustrate the loss on unreturned self-addrest stamped envelopes, I am returning two of your envelopes which were sent to me several months ago. I did not care to use these, and, ordinarily, in cases of this kind, the return postage which you send out is lost. Taking the country over, the total loss is no doubt large.

It seems to me that it would be a comparatively simple matter for the Government to furnish at a nominal cost special return stamped envelopes, the postage to be collected from the addressee before delivery. There would be no loss of postage on the envelopes that are not returned. The Government would not get pay for unused postage, which is entirely proper.

ROBERT A. GRANT

Saint Louis, Missouri

10c Each or $5.00 per 100?

If you bought our Panatela one at a time in the usual retail way it would cost you 10c

But you do not buy our cigars that way. They are sold direct from our factory to the smoker—by the box.

You don't need to be much of a student of merchandising to see the great saving made possible by our way of selling.

Our Panatela is in fact the same type of cigar that sells for 10c over the counter everywhere. It has a filler of selected long Cuban grown Havana leaf and a wrapper of genuine Sumatra. It is a hand-made cigar. Ask for this kind of cigar at any tobacco store and you will be shown no cigar at less than 3 for a quarter.

Our price is $5.00 per hundred delivered at our expense. Also we will send you the cigars at our risk, so that you may smoke several before paying out any money. Cut one open and confirm our statement that the filler is long and free from dust, shorts or cuttings. Compare our Panatela with any 10c cigar and decide for yourself if it is not a better buy.

OUR OFFER is: Upon request, we will send fifty Shivers' Panatelas, on approval, to a reader of *The Independent*, express prepaid. He may smoke ten cigars and return the remaining forty at our expense and no charge for the ten smoked if he is not satisfied with them; if he is pleased with them and keeps them, he agrees to remit the price, $2.50, within ten days.

If a friend offered you one of our cigars, wouldn't you welcome the opportunity to try it? You can ask no better opportunity than the above offer gives you. Why not take us up this time?

The Panatela is not our only cigar. We make seventeen different shapes, many of them Clear Havana cigars. Our complete catalog mailed on request.

In ordering, please use business stationery or give reference and state whether you prefer mild, medium or strong cigars.

THE MARKET PLACE

A REVIEW OF FINANCE AND TRADE

THE STEEL INDUSTRY

In the steel industry great activity continues, with increasing demands and a steady advance of prices. For some time past, price additions have been made every week. The supply of crude steel is insufficient, and for this reason the manufacture of certain finished products has been impeded. While war orders are responsible for much of the recent expansion, demand for domestic consumption is now a large factor. The mills have so much work on hand that new orders can be taken only with an understanding that deliveries cannot be made within the time ordinarily allowed. The French Government recently offered $15 a ton more than the market price for 26,000 tons of war bars, if they could be delivered in three months, but no mill was able to take the order on those terms. Bids for 100,000 tons of rails for France are to be opened in Paris next week.

The Corporation's report, for October 31, of orders unfilled surprized even those who had been predicting a considerable increase. An addition in one month of 847,834 tons was shown by the reported total of 6,165,452, which may be compared with 4,162,244 in April last, and 3,461,097 a year ago. On the Stock Exchange the price of the common shares had been declining, in sympathy with a falling market for war order stocks. This report turned the tide, and at the close of the day the Steel shares showed a net gain of 2⅝. One-fifth of the day's business had been done in the Corporation's securities, and it had been a million-share day. Light is thrown upon the condition of the industry by the fact that while output was taxing the capacity of the mills, the month's orders exceeded shipments by 847,834 tons. This capacity will be increased in two or three weeks by the beginning of work at the company's new plant in Duluth, which has been constructed at a cost of $20,000,000, and which will produce billets, blooms and other crude material.

BUSINESS IMPROVEMENT

Reports from all the commercial agencies and other recognized authorities, together with what may be called barometric figures in industry and finance, show growing activity and a decided upward movement in business. Evidence of the improvement is seen in unprecedented railway traffic, increase of railway earnings, the high record output of pig iron, reports of the Federal Reserve Board from the twelve districts, the Federal Comptroller's report as to the condition of the national banks, the work at high pressure in steel mills, the ease with which our great crops are moved and the current bank clearings.

THE INVESTOR'S SERVICE

The Independent is now offering a Service for Investors which will give personal attention to the desires of its subscribers for information in regard to investments of all kinds. We cannot of course decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write to us frankly and this Department will give them either by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves.

Responses to the recent call showed that the total resources of the 7613 national banks (something more than twelve billions) exceeded by $424,000,000 those disclosed by any preceding statement. A new high record was made by the bank clearings for October, which amounted to $20,144,355,592, exceeding those of October a year ago by 72 per cent, and those of October, 1913, by 28 per cent. Clearings for ten months show a gain of 12 per cent over 1914, 5 per cent over 1913, and 3¼ per cent over the high record year of 1912. In many industries output is sold far ahead. Money is plentiful and supplied at easy rates in response to legitimate demands. All the woolen mills are on full time. Flour mills and furniture factories are very busily engaged, there is more activity in building, increased purchasing power has stimulated the wholesale and retail trade, and even in the lumber industry of the Pacific northwest, which seemed moribund, there is evidence of revival. It is noticeable that the reports agree in saying that the activity is seen in industries dependent almost wholly on domestic wants.

NEW LOANS OR CREDITS

The English and French commissioners who came to this country some time ago to negotiate a loan, asked for $1,000,000,000, or that was the sum they had in mind. It was known that the loan of $500,000,000, for which there was an over-subscription, must be supplemented by additional loans, or by credits arranged by bankers here in agreements with those in London. In that city and in New York there have recently been conferences relating to credits, and now committees have been appointed to provide for the first credit, which will be for at least 250,000,000. It may be that the credit agreements will eventually involve $500,000,000 or $750,000,000.

Among the members of the American committee—of which Frank A. Vanderlip, president of the National City Bank, is chairman—are representatives of Morgan & Co., the Guaranty Trust Company, the Bankers' Trust Company, the National Bank of Commerce, and the Continental and Commercial and First National Banks of Chicago. At the head of the British committee is Sir Henry Cunliffe, Governor of the Bank of England. The credits are for payments due, or soon to be due, in this country, and the security will be British consols, British railway bonds, and possibly a few American railway bonds, deposited as collateral in the Bank of England.

A French credit for $15,000,000, all of which is to be expended here, has been arranged by a syndicate of prominent banks under the management of William P. Bonbright & Co. This may be increased to $30,000,000. Russia recently obtained a credit of $5,000,000, and seeks a much larger one. The bonds of Italy's new loan of $25,000,000 are on the market. These 6 per cent bonds, sold at par, are convertible at the end of one year into similar bonds, and the latter, a year later, may be exchanged for ten-year 5½ per cent gold notes of the Italian Government.

Payment of subscriptions to the Anglo-French loan of $500,000,000 has been made so promptly and in such volume that the syndicate gives notice that the payments originally required to be made on November 15 may be deferred until some later date hereafter to be named.

Six members of the French Industrial and Commercial Commission who arrived in New York last week, and who are to remain in this country for several months, are planning to spend at least $160,000,000 here, but not until after the war. They represent commercial bodies, manufacturing organizations, bankers, and, to some extent, the Government. They say that in recent times France has been paying Germany about $100,000,000 a year for machinery, structural steel and certain other products, all of which they intend to buy in the United States after the end of the war. Here they propose to procure the material that will be required for a rehabilitation of French industries, and they have begun a tour of inspection.

W. E. UNDERWOOD

AN EXPERIENCE

A long-time reader of The Independent and a loyal adherent of old line, legal reserve life insurance, Mr. Edward G. Sherley, of Albany, N. Y., writes this department narrating his life insurance experience and expressing his satisfaction with a policy which he secured in his youth, and on which he this year paid the fiftieth annual premium. His example should be an inspiration to others; and as the story is one of human interest I am going to transcribe so much of it as our limited space will permit. Mr. Sherley writes:

"In June, 1866, I secured a life policy for $2500 in the Connecticut Mutual, and last June paid the fiftieth premium. I was not married, but had an aged mother and a sister dependent on me. I was twenty-six.

"I have paid the company, cash, $1-752. I have kept an account in which I added each year the amount of interest I would have secured had I deposited the money in a savings bank. The total amounts to $5,720.

"But I have never been dissatisfied with the investment.

"Some thirty years ago I tried to get additional insurance for $1500, but was refused by two companies on account of heart trouble. About the same year (1885) I secured a 15-year endowment in the Connecticut General, carried it thru, had fifteen years of insurance, and received $132 more than all the premiums I paid on it.

"My experience has been satisfactory; but the companies which refused me lost a good risk, altho I do not blame them."

As Mr. Sherley omitted to mention the dividends received on the life policy, I wrote him inquiring about them, and in a subsequent letter, after explaining some early complications in the account he kept, due to notes given the company for part of the first four years' premiums, the interest on which should have been deducted in his first calculation, reducing the net cash he actually paid out, he says:

"As nearly as I can make out the matter stands thus:

"Entire amount of premiums for fifty years, $2612.48, less dividends of a little more than $1000."

The last statement of the company to Mr. Sherley shows his annual premium at $62.16, less a dividend of $27.97.

It is interesting to note in this case that at age forty-five he endeavored to secure additional insurance, presumably on the whole life plan, and was rejected because of a bad heart, and that he is at the age of seventy-six, in fairly good health and actively en-

gaged in business. It will also be observed that because of the shorter term, fifteen years, and the higher premium, he was able to secure about the same time an endowment contract which served his purpose. I thank Mr. Sherley for the privilege of printing his experience, and wish him continuance of days and happiness.

H. C. B., West Newton, Mass.—(1) Unless I had good reason to doubt the future stability of a company, I could not advise any one holding in it a policy four years old to drop it for insurance in another company. (2) The Columbian National Life of Boston is in good shape financially and from the viewpoint of management possesses average merits.

G. V. J., Chicago, Ill.—On December 31, 1914, the figures of the North American Life Insurance Company of Chicago were: Admitted assets, $2,515,847; total liabilities, excluding capital stock, $1,775,551; cash capital, $700,000; net surplus, $40,296. It is a stock company, issuing only non-participating policies. Its methods are sound, securities of good grade and the management of average ability. Last year its lapse ratio was very heavy. It had in force on January 1, 1914, total insurance amounting to $28,015,143; wrote during the year new insurance of $7,148,709; and ended the year with total insurance in force of $28,091,914, showing a net gain of but $76,771.

H. L. D., Manila, P. I.—(1) You have doubtless read in this department recently some observations in connection with the Merchants Life Insurance Company, formerly the Merchants Life Association. Your present contract is of the assessment variety; and the best proof that it is not safe for the future is furnished you by the men who issued it and who are now urging you to exchange it for one of their legal reserve policies. My advice is that you substitute an old line policy for it in some thoroly reliable company. (2) The John Hancock Mutual Life Insurance Company ranks among the best in the United States and you may safely rely on any statements it makes to you. I unhesitatingly pronounce it superior in every respect to the Merchants. (3) An "old line" life insurance company is one which, computing its premium charges on a standard Table of Mortality, provides for a mathematical reserve, the effect of which is to keep the premium "level" and at the same time to accumulate a fund that will reduce the net amount which the company has at risk. Altho the insured pays thruout life the same premium, the actual cost increases as he grows older. The reserve neutralizes this.

Temperance, Princeton, N. J.—I do not know of an American life company which, segregating its total abstainers, gives them the benefit of such savings in net cost as that experience would seem to warrant. Presumably all or nearly all the risks of the Presbyterian Ministers Fund are wholly or approximately of that class, for the company confines its acceptances to the clergy of the Protestant churches, their wives and students for the ministry. I have not seen any analysis of that company's experience, but the net cost to policyholders is, comparatively speaking, low. I know this, however, only in a general way; and I am prepared to believe that some of the well managed companies doing a general business are capable of making a strong case on that point. You have named three excellent companies in the Mutual Benefit, Connecticut Mutual and Northwestern Mutual. The Bankers of Iowa up to 1911 did business on the assessment plan, changing its corporate title and system in November of that year. It is now a mutual legal reserve company, but in my opinion, from the viewpoint of service to policyholders, as yet not comparable with the three first named. If you wish to gage accurately the comparative merits of the first three, discuss them with an agent of each.

THE PENN MUTUAL LIFE INSURANCE COMPANY

921, 923, 925 Chestnut Street, Philadelphia

1915

ATLANTIC MUTUAL INSURANCE CO.

ATLANTIC BUILDING, 51 WALL STREET, NEW YORK

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries.

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of	$27,964,578,109.00
Received premiums thereon to the extent of	287,324,890.99
Paid losses during that period	143,820,874.99
Issued certificates of profits to dealers	90,801,110.00
Of which there have been redeemed	83,811,450.00
Leaving outstanding at present time	6,989,660.00
Interest paid on certificates amounts to	23,020,223.85
On December 31, 1914, the assets of the company amounted to	14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

STEINWAY

You know this trade-mark through National Periodical Advertising

THE man who puts his brand on the goods he sells sets his light where it will "shine before men" because he is not afraid to have it shine on *him*.

He wants it to shine on him as well as on his goods because he has *nothing to fear* and *everything to gain* from the glare. When he adds to the illumination of the trade-mark the full light of national advertising you may be sure he is certain of his goods—sure that you will like them. He is willing to risk his *fortune* and his *business future* on the chance of your approval.

He would not do this if there really were a risk because he is a hard-headed business man. He has taken the risk out of his business by putting quality into his goods.

Deal with the man who is not afraid of the light. Buy the goods that bear trade-marks and are advertised nationally because these are the goods that it is safest and most economical to buy—safest because *you know who is responsible* for them, most economical because there is a *lower selling cost* included in the price of nationally advertised goods.

Trade-marks and national advertising are the two most valuable public servants in business today. Their whole tendency is to raise qualities and standardize them, while lowering prices and stabilizing them.

JUST A WORD

The colorful and spectacular setting for Serge de Diaghileff's Ballet Russe, which is reproduced on the cover of The Independent for this issue, was designed by Leon Bakst. It shows a climactic scene in *Scheherazade*, an oriental melodrama of savage beauty, one of the twenty ballets in the varied repertoire of the Ballet Russe. Some of the others which are to be given in America this season range from the fantasies of *L'Oiseau de Feu* to the romanticism of Schumann's *Papillons*, and the fanciful whimsies of the Russian burlesque scenes in *Petrouchka*.

The first performance will be given at the Century Theater in New York on January 17; in February and March the entire troupe will visit the leading cities of the United States, and in April they will return to New York for the last four weeks of the season at the Metropolitan Opera House. During the last six years the Ballet Russe has won widespread success in Europe.

Nijinsky, one of the great dancers of his generation, and Karsavina, supreme in her special field of mimetic dancing, head the troupe. Ernest Ansermet, prominent among the younger musicians of Europe, is conductor of the symphony orchestra of seventy pieces.

The music to which the ballets are danced is the work of eminent composers, classic, modern and contemporary, including Chopin, Debussy, Rimsky-Korsakov, Reynaldo Hahn and Schumann.

Something like nine hundred instructors in high schools, colleges and universities have already chosen The Independent for class-room use during the present term or school year. The orders run to several hundred copies weekly in some cases, and the aggregate into many thousands. Comments as to the peculiar fitness of The Independent for this purpose come from every state in the Union, and a few sentences taken almost at random from recent letters will show the general trend of all. A high school principal in North Carolina writes:

"The first order of Independents received Pupils simply carried away One father took the magazine on the child's arrival and at ten o'clock still refused to give it up" From another high school principal "It is the most vigorous, the most thought-provoking, the broadest, and withal the truest of our great weekly journals" From Oregon Agricultural College "The Independent is very greatly appreciated by our student body for *the intelligent discussion of the great questions of the day, and its clear style*" And from the Iowa State College comes this, which is certainly good reading:

I am now using The Independent with two classes and the young men reading The Independent have recognized such frivolous literature as Hardy, Doyle, Tolstoi, Euclid, Aristophanes, Xenophon, Bunyan and Edna Ferber cast to digest The Independent Many of them have been noticed sleeping with The Independent in the same room while one young man took two copies to the football game to serve as a literary cushion. All of which shows we are developing a spirit here that is both dependent and Independent

REMARKABLE REMARKS

WOODROW WILSON—America first.

KING GEORGE—It is the final lap that counts.

WILLIAM A. BRADY—What has become of the matinee idol?

PROF. SCOTT NEARING—Private schools must be swept aside.

BELVA LOCKWOOD—I may be a candidate against Wilson in 1916.

THEODORE ROOSEVELT—Either we need to prepare or we do not.

ETHEL BARRYMORE—Women love men for wanting to be mothered.

LADY DUFF-GORDON—We have not quite reached the pantalette stage.

MARGARET WILSON—It is disgraceful the way the majority of voters vote.

VICE-PRESIDENT MARSHALL—My wife is against suffrage, and that settles me.

NICHLAS LONGWORTH—The American people are riding hellbent into bankruptcy.

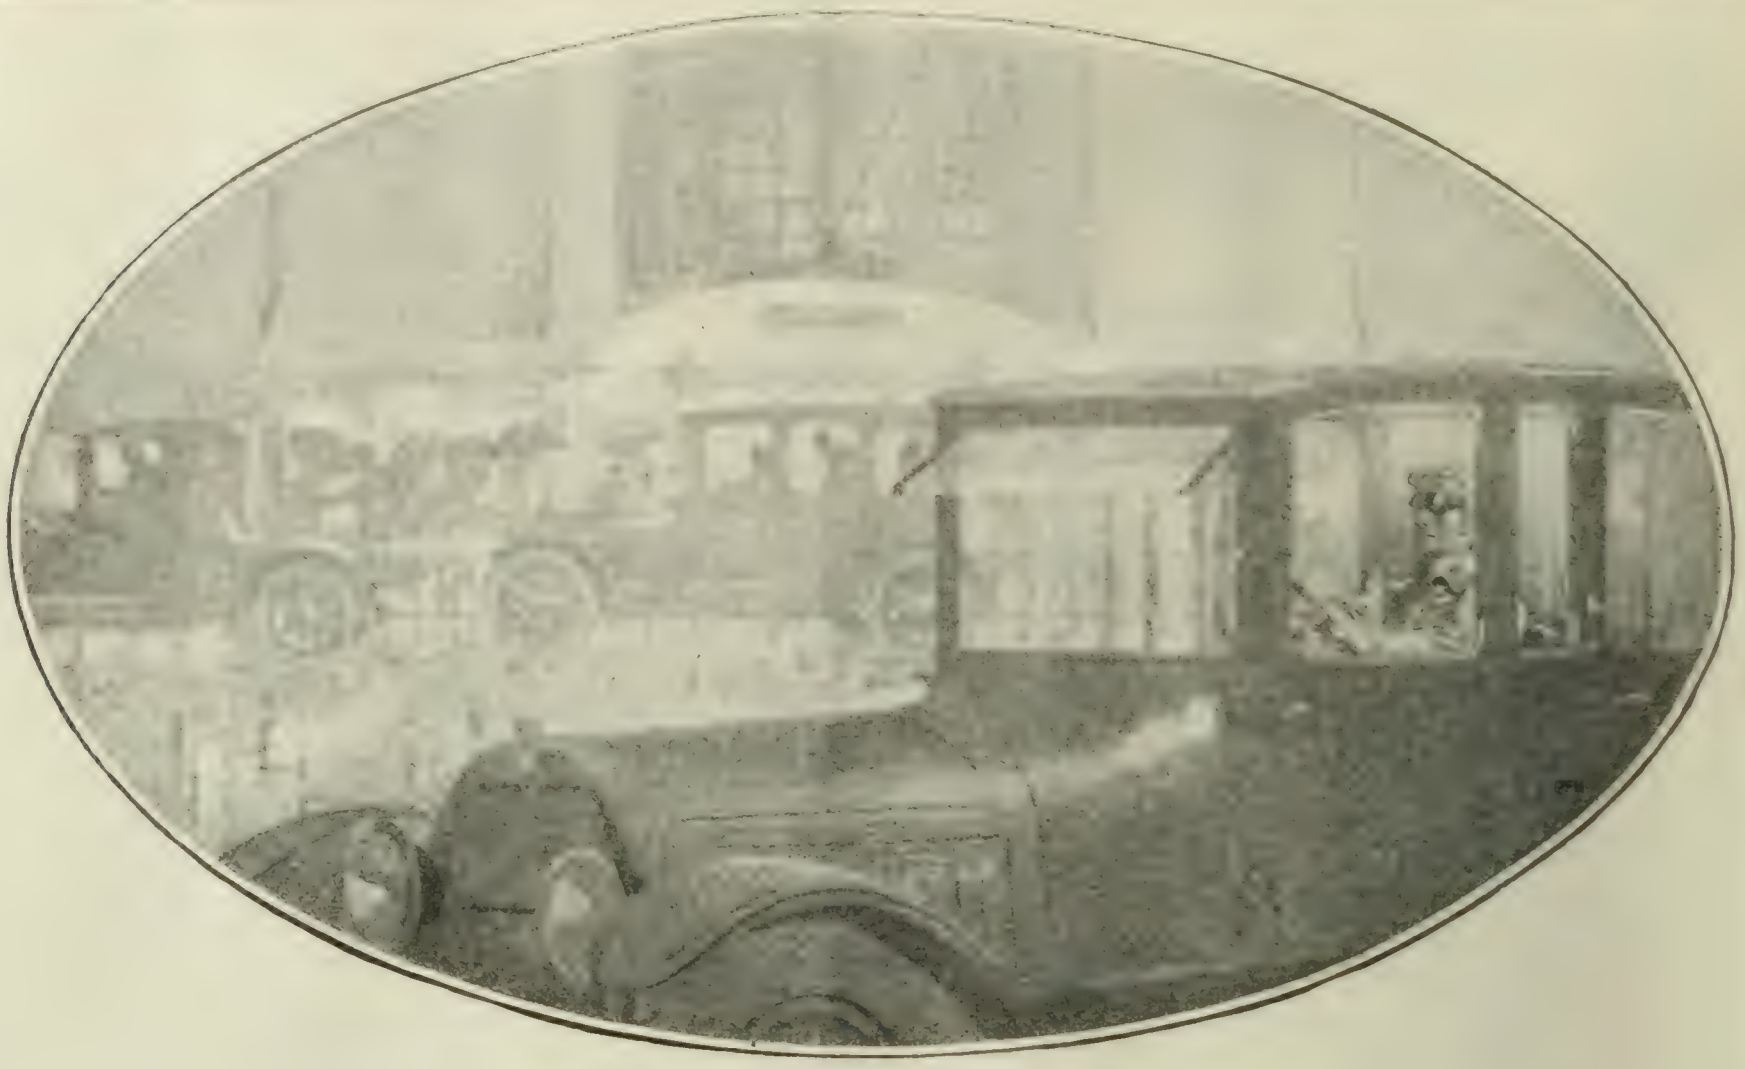
RECTOR GEORGE C. RICHMOND—The Episcopal Church is controlled by Wall Street.

CONGRESSMAN TAVENNER—Behind the war trust is the most powerful group of men in the U. S.

TOM WATSON—Would New Yorkers allow Georgians to invade their state and hang Nathan Straus?

DR. ANNA E. BLONT—In dealing with hopelessly idiotic children, I would be willing to take their lives.

WILLIAM J. BRYAN—I am very glad to have the controversy shifted from the munitions plants to the Bible.



TOM SHEVLIN, YALE COACH—Life and football are not so much in having a good hand as in playing a poor one well.

PRESIDENT MURLIN OF BOSTON UNIVERSITY—The proposition to abandon night schools in New York is frightful to contemplate.

G. K. CHESTERTON—Nothing is more remarkable than the relative disappearance of the Emperor and Crown Prince—and Gott—from this struggle.

THEODORE CHANDLER—A successful banker is composed of about one-fifth accountant, two-fifths lawyer, three-fifths political economist, and four-fifths gentleman and scholar.

BERNARD SHAW—If all the brains and literary talent and energy and enthusiasm which have been put into the writing of balderdash during the last year of the war, had been devoted to pulling us thru the war, we should have been almost in Berlin by this time.

CADILLAC ENCLOSED CARS present that unique combination of the truly artistic in body conception and the highest standards of scientific body construction.

But these will be only the beginning of your appreciation. That appreciation will extend far beyond exterior beauty, luxurious upholstery and exquisite environment.

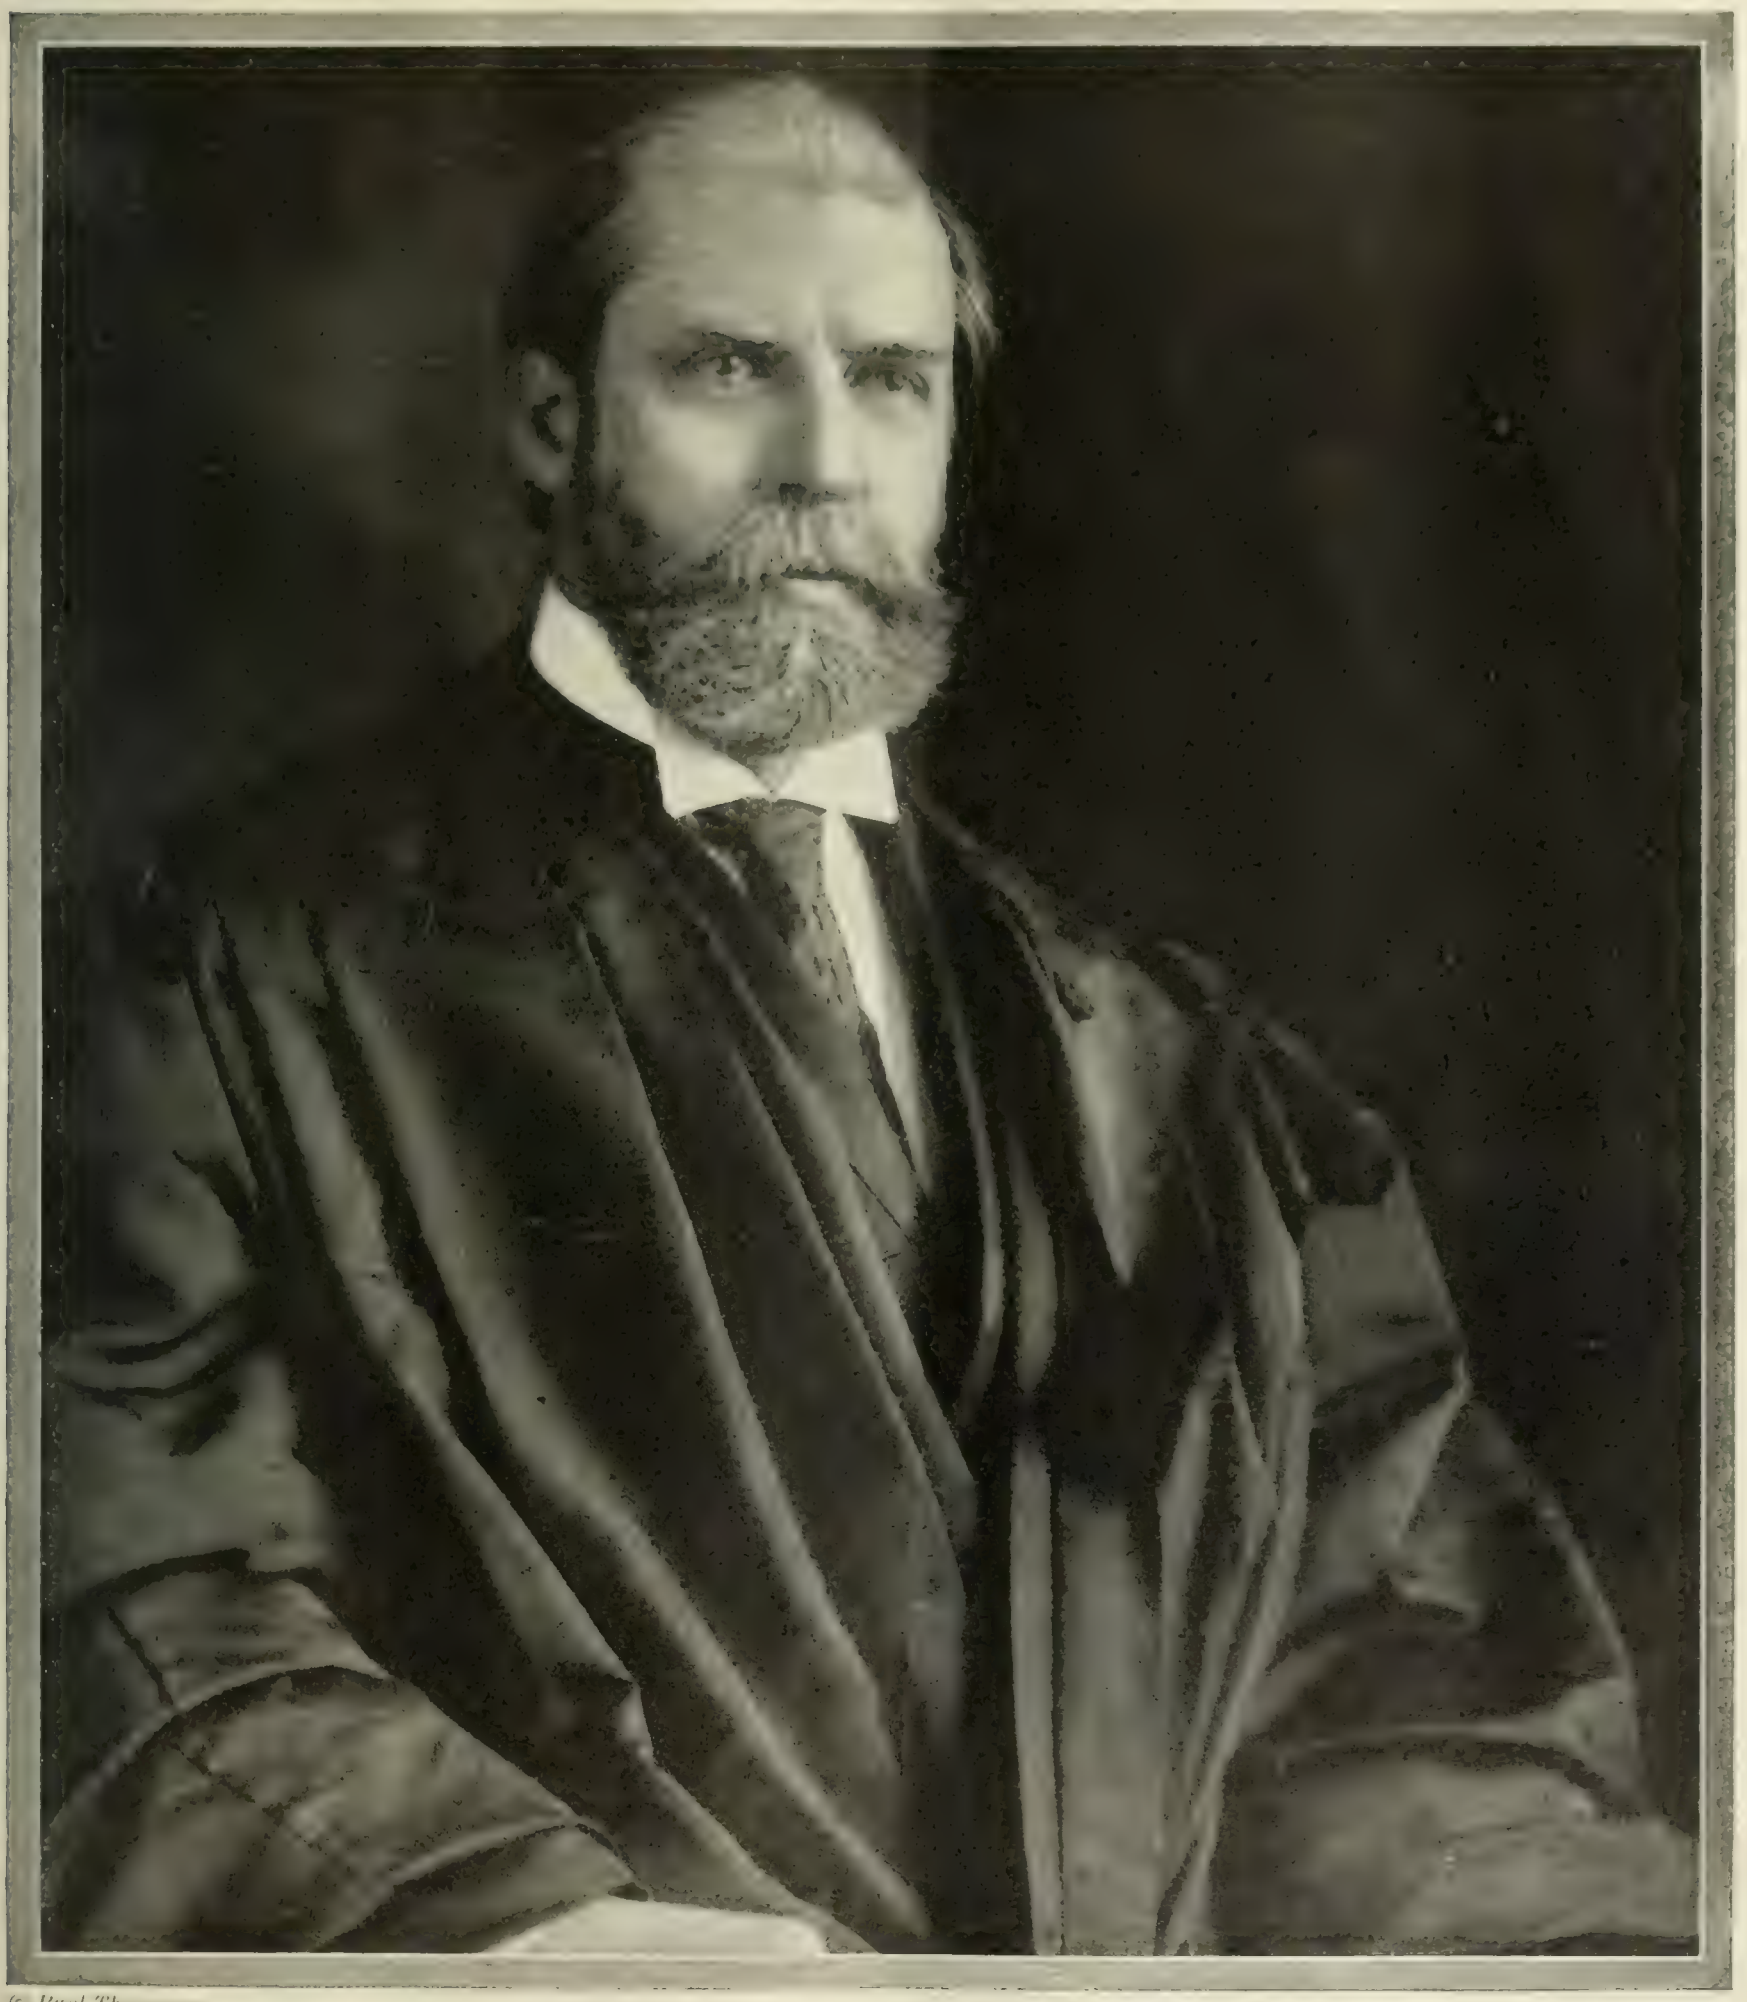
The atmosphere of ease and elegance is supplemented by the super-smoothness of the Cadillac Eight-Cylinder engine.

The dull rumble which you may have associated with cars of the enclosed type is practically negligible in the Cadillac.

A sense of velvet softness characterizes every motion of the car.

Your ideals of grace and beauty become realities.

Your mental relaxation and your physical comforts are complete.



Cadillac Enclosed Cars comprise the following: Three-passenger Victoria, $2,450. Four-passenger Coupe, $2,800. Five-passenger Brougham, $2,950. Seven-passenger Limousine, $3,450. Seven-passenger Berline, $3,600. Quotations F. O. B. Detroit

WHY NOT THE REPUBLICAN CANDIDATE?

MR. JUSTICE HUGHES HAS CONSISTENTLY REFUSED TO ALLOW HIS NAME TO BE USED IN CONNECTION WITH THE REPUBLICAN NOMINATION FOR THE PRESIDENCY. BUT IT IS AN OPEN QUESTION WHETHER ANY MAN WOULD HAVE THE RIGHT TO REFUSE A NOMINATION, IF IT WERE TO COME TO HIM WITH ANY DEGREE OF UNANIMITY. FOR FURTHER DISCUSSION OF THIS POINT OF VIEW SEE THE FOLLOWING EDITORIAL

WHY NOT THE REPUBLICAN CANDIDATE?

WHO shall be the Republican candidate for President? It is only seven months before the nominating convention. If there is to be any effective opposition to the reëlection of Mr. Wilson—who is the logical and the probable candidate of his party—there must be accomplished a great deal of getting together in those seven months. The question whether a Democrat or a Republican shall be elected to the presidency next year will of course be a hotly contested one. The outcome of the contest will depend in great measure on the progress of events during the coming months. But of the value and indeed the indispensability of a vigorous and healthy opposition there can be no question.

Two suggestions for a Republican candidate have just been made public. One touches the hights of absurdity. Senator Boies Penrose is reported to have announced his candidacy. If any one thing is certain it is that the Republican party could not hang about its neck before entering the next campaign a more ponderous millstone than such an apostle of reactionism and boss-rule.

The other suggestion is of quite another color. It is presented in definite form by the action of certain Republicans in Nebraska in putting the name of Mr. Justice Hughes on the presidential preference ballot for the approaching primary. Justice Hughes has resolutely declined to permit his name to be so used. The incident raises two important questions.

The first is, Would Justice Hughes make a good candidate and a good President? This question can only be answered with an unqualified affirmative. That he would make a good President is evidenced by his record in public life—as investigator of the New York life insurance companies, as Governor of New York, as Justice of the United States Supreme Court. It is evidenced by his breadth of vision, his single minded devotion to the public welfare, his intellectual strength and integrity, his fearlessness and his industry.

Would he make a good candidate? None better. The Republican party at this critical point in its career needs healing. It needs to bring back into its ranks those who went out because of the Chicago convention of 1912. It must have a candidate on whom divergent factions can unite; who will neither terrify the conservative nor disgust the radical. He must be a man for whom those who voted for Mr. Taft and those who voted for Mr. Roosevelt can vote with equal grace.

Such a man is Mr. Justice Hughes. He is progressive, but keeps his feet upon the ground. He is conservative, but he is not afraid to take steps—and long ones—forward. He has the trust and admiration of the whole country. He would make a good candidate and a better President.

The other question is, Has any man the right to refuse a nomination for the presidency?

Any man has a right to decline to enter a contest for such a nomination. To men in some positions this right becomes an obligation. Among such positions are those upon the judicial bench. So Mr. Justice Hughes, in refusing to become a party to a movement to bring his name before the Republican National Convention, not only is within his rights, but is setting an admirable example of judicial propriety and high-mindedness. It was only to be expected of him that he would not permit himself to be used to drag the judiciary into politics.

But to say that the American people may never go to the bench for a candidate for the presidency is to say too much. To say that even a member of the Supreme Court of the United States would be justified in refusing anything like a unanimous call to become the candidate of his party in a presidential campaign is to put too low a value upon the right of the people to be represented as they wish.

Mr. Justice Hughes is infallibly right in averting his face from any struggle for a presidential nomination. He will continue, we know, to refuse to be drawn into any such tangle. But if a Republican convention in the fullness of time should with enthusiasm and conviction call upon him to lead them in the presidential campaign, we do not see how he could refuse to become their standard-bearer.

The Republican party could not have a finer leader.

WHAT ARE YOU FIGHTING FOR?

AFTER a year and a half of unprecedented slaughter and destruction and with the prospect that the war may continue for years yet, the time has come when the outside world has the right and duty to ask of the belligerents, *What are you fighting for?* It ought to have been asked long ago. It should have been answered before it was asked. Every government owes it to its own people whom it is calling upon to sacrifice their lives as well as to the neutrals whose sympathy it desires, that a clear statement be given to the world of what are the objects for which it is putting forth these stupendous efforts. But not one of the twelve nations involved has made such a statement, and all of them so far have refused even to consider such action.

Yet there is nothing absurd or irrational in such a question. Understand, we are not asking: "Why did you enter the war?" That is something for the future historian to discover if he can. It does not concern us of the present who brought on the war or what they did it for. The few who know will not tell and it would merely serve to satisfy our idle curiosity if they did. The thing we need to know is not what started the war, but what is keeping it going and how it can be brought to an end.

Neither are we asking: "What are your peace terms?" That is a question that will have to be answered in general by arms and in detail by negotiation. Each of the belligerents defiantly insists that the time has not yet come for the discussion of the conditions of settlement and perhaps they are right about it.

But it is time for them to give a concrete answer to the fundamental question of what they hope to gain by keeping up the fight for months or years to come. If they do not give such an answer it will inevitably give

rise to the suspicion that the only issue to be decided is which group of nations is the stronger, or rather — what is not quite the same thing — which can longer endure the drain of blood and gold. If so, the Great War is as idle as when two playful schoolboys beat each other with switches to see which can stand punishment the longer.

But if we are not to believe that the Great War is so purposeless, then we are entitled to know what the several belligerents hope, desire and believe themselves entitled to. Each of the two groups of combatants will, it is understood, act as a unit in making peace, but since each of them has its own aims and demands they should be considered separately. Why should not every nation now at war formulate what it regards as its rightful claims and what it would enforce if victorious? Let each make its claims as large as it pleases. Let it frankly ask for what it wants, whether it expects to get it or not. What it will get will depend on how the war turns out, but no nation ought to be reluctant about saying what it desires to get out of the war. These are not peace negotiations, so there is no danger of anything being lost by frankness. Nobody proposes to compromise by splitting the difference. If the claims put forward are preposterous, they will be laughed at in the neutral nations. If they are grasping they will be frowned upon. But in any case they will be considered and will command such respect as they deserve.

The only replies so far given by the various governments to this question, are, first, that they are fighting in self-defense, and, second, that they are fighting in order that their civilization and ideals may not perish from the earth. The first is obvious; each of the belligerents, whether or not it was guilty of aggression or provocation in the beginning, is now fighting for life. The second reply may also be accepted without discussion.

But when we come to put the rival claims into concrete terms we have no official statements to go by. We do not know what England demands or Germany demands. We only know what some Englishmen and some Germans say they want. But even such irresponsible discussions as have appeared in print give some clue to national aspirations and in the absence of official data are worth a brief consideration.

We may assume first that every country will want an enormous indemnity. But how much it will get will depend not so much upon its demands and needs as upon the financial standing of the defeated party at the end of the war. It will in any case not be possible to obtain an indemnity sufficient to cover the expenses and losses of the war. The only cases where the indemnity is likely to be a vital factor are Belgium and Serbia; for the Allied Powers if victorious will doubtless insist upon some compensation to these feeble and ruined countries.

Let us consider in turn what each country might ask for itself in case of victory. Would England be content with the territory which she has already gained by the war? This amounts to some 1,400,000 square miles, or more than ten times the area of the United Kingdom. Great Britain has virtually acquired from Germany since the war began German Southwest Africa, German East Africa (altho the conquest of this is not complete), Kamerun (unless this is counted a French conquest), and in the Pacific Kaiser Wilhelm's Land and the Bismarck, Caroline, Pelew, Marianne, Solomon, Marshall and Samoan Islands. From Turkey Great Britain has acquired so far Egypt, Sudan, Cyprus and Lower Mesopotamia. The British demands might possibly include also Heligoland from Germany and Arabia from Turkey. The surrender and future limitation of the German navy has also been suggested in British journals as a necessary precaution, as well as various plans for the dismemberment of the German Empire and the weakening of its military power. The neutralization of the Kiel Canal has also been proposed. How many of these are approved or regarded as essential by the British Government and people?

Now let us turn to Germany. Would Germany now be willing to conclude peace either on the basis of the status before the war or on the basis of her present holdings? Some German writers have hinted that peace might be made on the basis of the restoration of Belgium, the autonomy of Poland and the retrocession of part of Alsace-Lorraine. Others more ambitious demand the acquisition of Belgium, Luxemburg and northern France as far as Calais, of Poland and Courland, of Morocco, Tunis and Algeria from France, of Libya from Italy, of the Kongo from Belgium and of various colonies from Great Britain, as well as the restoration of their African and Pacific possessions now held by the British. Probably the demands of Germany, if ever formulated, would be found to lie between these extremes.

France is fighting of course to free her soil from the invader and to regain Alsace-Lorraine, perhaps also for some slight extension of her territory in this direction for strategic purposes. The colonial acquisitions mostly mentioned in discussions of the question are Togo and Kamerun in Africa and Syria in Asia.

Austria-Hungary covets Serbia, Montenegro, northern Albania and Salonica, possibly Venetia.

Russia wants primarily the recovery of the territory now held by the Germans, and next a southern seaport, preferably Constantinople. Besides this, she would desire northern Persia, a large part of Armenia, and perhaps German and Austrian Poland.

Italy's ambitions are well understood. They comprize the Trentino and all of the Austro-Hungarian islands and coast land on the Adriatic, also the greater part of Albania and perhaps a foothold in Syria.

Bulgaria wants the southern part of Serbia and the northern part of Albania with an Adriatic port, also the recovery of the territory of the Danube delta which Rumania took from her in the second Balkan war. Presumably also her ambitions extend to Salonica and Constantinople.

Serbia needs first freedom from invasion. Her territorial aspirations include northern Albania, Bosnia, Herzegovina and Croatia-Slavonia.

Montenegro would like Scutari and adjacent territory in northern Albania.

Japan would doubtless be content with the foothold she has obtained in China by the capture of Tsing-tau.

Belgium longs only for independence and such compensation as is possible. The proposed cession to her of Luxemburg and certain German territory does not seem to meet with the approval of the Belgians.

These, then, are the desires of the twelve belligerent nations in so far as they can be surmised from unauthoritative sources. If we could learn what of these vaguely defined aims and ambitions are to be seriously regarded as expressions of the present intentions of the

respective governments, it would be possible to compare them and see in what respects they are irreconcilable. Perhaps once put down on paper they would not prove so far apart as they seem to be. For, after all, what every nation is now fighting for is primarily peace. This must be a just and permanent peace, but in order to secure that we must first find out what each of the belligerents regards as just to its own interests and necessary for the preservation of peace.

BOOKER WASHINGTON

OUR most distinguished citizen of negro blood has died a patriotic and worthy death after a very brief illness. His last address was in behalf of his negro brothers and sisters before the American Missionary Association. From New Haven he went to New York and consulted a physician, who told him that he had but a few days to live. He was born in the South, he said, and he would die and be buried in the South; so he hastened back to his beloved Tuskegee, reaching home at midnight, and four hours later he died. His was a fitting end of a great career.

He was born a slave, yet his was native genius to which was added the genius of taking pains. He was an utterly ignorant boy, scarce able to read, but he had heard of Hampton Institute and General Armstrong, and he found his way there without money. All the capacity he could show was that he could sweep a room and dust it clean. In three years he had graduated and became a teacher in the industries of the school. There came a call for a teacher of a negro school in an out of the way town in Alabama, and General Armstrong selected him to go to Tuskegee. There he found nothing, no schoolhouse, no scholars; but in twenty-four years he created the largest negro school in the world with a whole village of buildings and a million and a half of property. It was all his work, his enthusiasm, his energy, his business tact, his inspiration. He traveled thru the North, found the givers, gathered an extraordinary body of supporters and trustees, and gained the admiring confidence, by his wisdom, his shrewdness, and his eloquence, of the white people of the country, South as well as North, and was generally accepted as being the leading negro of the country. So marked was his leadership that one President after another made him his adviser on negro matters.

How did he gain this general favor both North and South? It was largely because he kept to his own business of running an industrial school and trained boys and girls to be farmers and mechanics and housekeepers and seamstresses and teachers. He constantly told his people that they must make their own way by productive labor, and that an inch of production was better than a mile of complaint. Doubtless he felt the disabilities under which negroes suffer in the South and, to a less extent, in the North; but he never blustered about them. They would make good, he told them, only by their own peaceable, hard work. That is the sort of policy which was popular in Alabama and is scarcely less popular in New York and Boston, where he gathered his money. Yet he kept tab on the wrongs about which he kept silent, and The Independent received from him, year after year, the number of negro lynchings. Just so Dr. Washington talked only of industrial education, but he took his wife and his teachers from Fisk or Atlanta University and was trustee of more than one negro college.

There are negroes who have had no love for Dr. Washington, who would have it that he was too mealy-mouthed about negroes' rights and wrongs and was overcareful not to offend the sentiment and prejudices of the white people with whom he came in contact. We have never sympathized with that view of him. He had a great work to do and it was his duty to succeed and to give as little offense as possible. To others came the duty of demanding rights, to him came the duty of gaining friends, and quieting enemies. He had a great gift for speech and an equal gift for silence. It has been a very unhappy thing that negro leaders have been divided into two hostile camps. Both policies are necessary, both that constructive effort which hoes corn and plants cotton and buys land and builds a house and runs a bank, and that other which demands civil rights and fights injustice and insists upon a citizen's rights in his own land. Of the former policy Booker T. Washington, honored by the degrees of Harvard and Dartmouth, was a conspicuous example.

CAN WIVES BE TRUSTED WITH MONEY?

THIS is the question now agitating England, for the enlistment of some 3,000,000 men in the army has given to many of their wives the opportunity of spending money without having to ask their husbands for it. The Government allowance for the support of the families of enlisted men is paid directly into the hands of the wives and there is abundant evidence that it is not always wisely expended. The number of convictions for drunkenness among women has gone up alarmingly in the year, while the number among men has gone down.

Altho such a large number of drinking men are at the front, where they are limited to their daily tot of rum, the drink bill of the United Kingdom for the half year of war ending June 30 was $40,000,000 more than during the corresponding half year of peace preceding. That is to say, $25,000,000 more have been spent for beer, $20,000,000 more for spirits, and $5,000,000 less for wine. This would confirm the general impression that the upper classes are drinking less, or at least economizing on their liquor bills, while the lower classes, especially the women, are drinking more. The increase in consumption is not quite so great as these figures indicate, because prices are higher, but it is considerable. Considering that the annual drink bill of the country is ordinarily over $825,000,000, it is a serious matter to have it increased by perhaps $100,000,000 in a time when the utmost economy and efficiency is demanded. The new anti-treating law, which went into effect October 11, is expected to cut down drunkenness in the cities.

Perhaps more effective than these statistics in giving an idea of the situation is the British cartoon of a scene in the slums, where two gossipy women on the street are commenting on the frequent visits of a neighbor to the public house. "That's the fourth time she's gone today," says one. "Never mind," says the other, "Let her enjoy herself while she can. The war can't last always and her husband will be back some time."

It is to be hoped that these tyrants who keep their purses in their own pockets and dole out money to their wives only after earnest solicitation, will not learn of these statistics and be confirmed in their evil ways.

WHERE GOES THE LABOR MOVEMENT?

THE center of the stage has not been held by the labor movement for a year and a half, and hardly anybody except the peace-at-any price element in the socialistic ranks has thought to ask what has become of it. It is still behind the scenes, and when the military issues of the war have been determined, the old group of players will come forward again, and will have something to say about the constitution and the policies of human society in the days of industrial and moral reconstruction.

In Germany, and perhaps in Russia, the possibilities of revolutionary change, with or without violence, are undoubtedly portentous. The amateur strategists have been talking a good deal about the way that the Confederate States held out and fought in our Civil War after they were starved. Germany may hold out and fight after she is starved, but the history of the Southern Confederacy affords no true analogy. The southern population did not include a vast wage-earning proletariat. The population of Germany does. The population of the southern states did not include a powerful business class, living by industry and trade. The population of Germany does. When the day comes that the German business men grasp the awkward fact that Germany's monstrous expenditures for explosions and slaughter are not to be paid for by a defeated enemy, held up for a staggering indemnity, things will happen in Germany; and it may not be the business class that will control the happenings. *Vorwärts* may have more to say than the *Gazettes* and *Tageblatts*. Later on will come any effective disturbances in Russia, whether ineffective disturbances occur soon or not. But Russia will emerge from the war with an extended railroad mileage, with greatly improved means of communication, with industrial activities stimulated. There will be a new spirit there, and it will work until it achieves things.

So it is not uninteresting or unimportant to inquire what the labor movement is pushing and turning by way of practise in these days of retirement from publicity. In France it is on the whole giving itself to works of patriotism, with good conscience and a clear head, for in France the people are the state and the people know it, and the industrial classes are in the forefront of government organization and policy. In England the labor movement is loyal and patriotic, notwithstanding the fact that it indulges itself in a plenty of growling and of talk, which need not be taken too seriously, to the effect that the working class would be quite as well off if Germany took possession of the little island and ran it on the German plan.

And in America, where goes the labor movement? Let nobody suppose that it is as dead as it is quiescent, even tho it be a fact that its inactivity is real, and not a mere pictorial toning down of values under the shadow of war. It is real, because before the war began there was dissension everywhere in the ranks. The Socialist Labor Party, the Industrial Workers of the World, and the Federation of Labor were belaboring each other's ideas, programs, and methods, and dissipating their energies on a rather grand scale. The significant fact just now is that they are getting tired of dissension, and are trying to work out a plan to unite their forces. The first stage, apparently, is to make Union Square in New York City a labor center, and to create a labor center organization. Good brains have been enlisted for the work, including the brain of that interesting genius Dr. Charles P. Steinmetz, the engineering expert of the General Electric Company, of Schenectady, a Socialist who can give reasons for the faith that is in him, and who can apply organizing ability and efficiency to any job that he undertakes. Of this new integration of the labor movement forces Mr. Steinmetz says: "For the first time in this country I see a sound and well thought out program which labor can use to increase its voltage."

Obviously, if the forces of the labor movement can be united for a general offensive, it will be upon a plan of campaign less radical than that of either Socialists or Industrial Workers, and more progressive than that of the Federation of Labor. It will have to confine itself to big issues of legislation, and to very big issues of direct action, when that is resorted to. If such agreement is achieved, the labor movement will become a far more important factor to reckon with in our political and our industrial evolution. The chances are good that, when the world is once more at peace, the labor movement will again take the center of the stage.

Was the Doctor Right?

A BABY was born in Chicago two weeks ago blind in one eye, with only one ear, and otherwise seriously malformed. The doctor believed that if the baby lived he would be a hopeless cripple and suffer from fits. He advised the parents not to have an operation performed which would probably save the baby's life. They consented; and the baby died after six days of life.

Was the doctor right? Was he justified in advising—and the parents justified in deciding—that no effort should be made to keep the child alive?

Has a physician the right to decide for himself whether or not he will do everything in his power to preserve a life, no matter what the conditions may be? Have parents a right to decree death for their new-born child because they believe that it will be a hopeless cripple or a defective if it lives?

It is a grave question. Not all the arguments by any means are on one side. It is a far reaching problem. It involves not only new-born babies, but the aged, the incurable and the hopelessly suffering.

The Independent will be glad to have the judgment of its readers on this vital question. A collection of their opinions, if they will send them in, will be published in an early issue.

THE STORY OF THE WEEK

The Crushing of Serbia

The Bulgarian invasion has crashed right thru the middle of Serbia from east to west. The northern part of the Serbian army must soon surrender or seek refuge in hostile Albania. The southern part must soon surrender or seek refuge in none-too-friendly Greece. Practically the whole of Old Serbia, that is the country as it was five years ago, is now conquered. In the north the Serbs are fighting a losing battle with the Austro-German forces in the old debatable land of Novibazar, which before the Balkan wars used to lie between Serbia and Montenegro and was occupied by Austrian troops.

In the south the Serbs are trying to hold on to the lower corner of the Macedonian territory which they acquired in the Balkan wars. They hoped for a time to be able to stop the Bulgarian advance at the Babuna Mountains which stand between Veles and Prelepe. Here 5000 Serbs held the pass for more than two weeks against some 20,000 Bulgars armed with heavy artillery in the hope that the French and British might come to their rescue from the Vardar River, only forty miles east or from Salonica by rail to Monastir. In their heroic defense of Babuna Pass they are said to have killed more than their own number of the enemy and might have held them in check, but as at Thermopylae a path was discovered which led around the defile. While continuing the attack on the Serbian front a detachment of Bulgars made their way over the mountains on the Serbian left by means of a goat path so narrow that the soldiers had to walk in single file. When they found themselves outflanked the Serbs withdrew from the pass and fell back upon Prelepe. This town they did not attempt to hold and the Bulgarian cavalry entered it in the evening. The Serbs are making their last stand at Monastir, only twelve miles from the Greek frontier. The native population of this region of New Serbia is largely Bulgar and many of them will welcome the Bulgarian army. The rest of the population is panic stricken and since there is only one railway leading out of Monastir crowds of refugees with their bundles and belongings are hurrying away thru the mountain roads into Albania and Greece. A sweeping movement of the Bulgarian right to the west of Uskub has opened the way for a descent upon Monastir from the north along the Albanian border.

The Serbian Muddle

The Serbian people are in despair and, like the Belgians at the beginning of the war, disposed to blame the British for not giving them in time the promised support. This view of the matter is also held by many in England and found expression in the harsh

THE GREAT WAR

November 15 Serbs falling back on Novibazar. British renew attack on Krithia Hights, Gallipoli.

November 16 Germans retreating west of Riga. Artilery duels in Artois and Champagne.

November 17 Bulgars gain Babuna Pass, Serbia. General Linsinger defeats Russians at Czartorysk.

November 18 Bulgars enter Prelepe. Venice bombarded by Austrian aeroplanes.

November 19 Earl Kitchener at Salonica. Italians bombard Görz.

November 20 China is invited to join the Allies. Monastir reported taken by Bulgars.

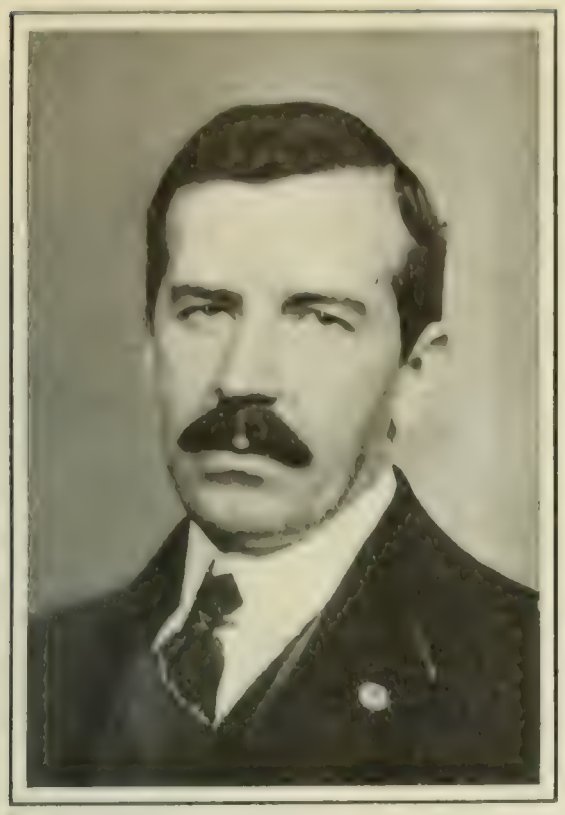
est criticism which the Government has received since the war began. Sir Edward Carson read in Parliament his letter of resignation, in which he quotes Sir Edward Grey's statement of September 28:

> We are prepared to give the Serbs all the support in our power in the manner that will be most welcome to them without reserve and without qualification.

When he learned that there were no plans ready for carrying out this promise of support and no possibility of doing so adequately he felt impelled to dissociate himself from the Coalition Government.

In his reply Sir Edward Grey said that his statement referred to a promise made at the request of Greece to send a certain number of men to Salonica for the purpose of enabling her to fulfil her treaty obligations to Serbia. This did not satisfy the critics of the Government, who contend that sending 13,000 British troops, together with 40,000 French troops, a month later and too late, as it proved, to save Serbia is not what Serbia had a right to expect.

The Serbian Government blames the Allies not only for failing to send the expected reinforcements, but also for not letting them defend themselves in their own way. General Putnik, commander-in-chief of the Serbian forces held that the time to attack Bulgaria was when she began mobilizing on September 23 and an urgent telegram was sent to the Allied Governments urging that an ultimatum be issued calling upon Bulgaria to demobilize at once. If he had been allowed to take the offensive Marshal Putnik believes that he could have captured Sofia or at least prevented the capture of Nish. But Sir Edward Grey prevented, or, at least, discouraged this action on the part of Serbia and in consequence Bulgaria had time to mass her troops along the Serbian frontier ready to invade the country from the east at the same time that the Austro-German troops invaded it from the north



The Southern Slav Committee, composed of prominent Serbs and Croats in England and the United States, including Professor Pupin of Columbia, issued the first of November a manifesto to the British nation calling for their aid in defense of Serbia and the eight million of their race in Austria Hungary. One paragraph we quote:

> When the conditions arose on the field of Kossovo the Turk annihilated the Serbian State. Europe admires Serbian valor as she admires it today, well knowing that at Kossovo the Serbs in defending themselves were fighting the battle of civilization against Ottoman barbarism. But Europe gave no help and Serbia succumbed. The downfall came. Europe lost millions of bloody toil and sufferings unfold. The triumph of the Pan-Germans [illegible]

BACK TO THE ARMY AGAIN

Winston Churchill, after having been First Lord of the Admiralty and [illegible] position in the Coalition Cabinet, has resigned to go to the front as major in his old regiment

Bain

INFORMATION ABOUT PLOTTERS

Dr. Joseph Goricar, former Consul of Austria-Hungary, whose sensational revelations of a system of espionage here have implicated many prominent Austrians and Germans

The Campaign in Russia

This week we have a reversal of the usual news, for we hear that in the north the Germans have been defeated and in the south the Austrians have been victorious.

Field Marshal von Hindenburg has not only failed to reach Riga from the west, but has been driven back more than ten miles beyond the positions he has held for months previously. The Russians, advancing thru the swampy shoreland of the Gulf of Riga, have regained Kemmern and are now approaching Tukum, where the railroad from Riga joins that connecting Mitau with the port of Windau. If they should succeed in cutting the railroad at this point the Germans would be prevented from getting supplies from the Baltic thru Windau and might evacuate Mitau.

The army group under the command of General von Linsingen operating in Volhynia, the Russian province lying northwest of Galicia, has not made any gains for some time. Now, however, big guns have been brought to the front and the Austrians have resumed their offensive, apparently with the object of advancing along the railroad which leads from Kovel to Szarny. The Russians who occupied a strong position at Czartorysk, on the western side of the Styr River, defended by four series of entrenchments, have been dislodged and driven back across the river. They burned their barracks and winter stores before evacuating. The Austrians took near here 1515 prisoners, and report that 2500 Russians have been buried. According to a Petrograd announcement the Russians in the month past took 19,874 Austro-German prisoners and captured 21 cannon, 118 machine guns, 18 bomb-throwers and 3 searchlights.

New Attack in Gallipoli

At the very time when it was the belief of London that the Gallipoli campaign would be abandoned as a failure and the belief of Berlin that the withdrawal of the British troops had already begun, a new offensive was started against the Turkish fortifications at the tip of the peninsula. The key to the position here is the hill of Achi Baba, 709 feet high, on the western slope of which stands the village of Krithia. For the last nine months this point has been the object of the British attack, at first by the fleet and later by the army. On April 25 troops were landed on the Gallipoli beach only a mile from Krithia, which they were at first reported to have captured. But they were only able to hold the shore and since then have made almost no progress in this direction.

A ridge about two hundred feet high runs close to the shore here and between it and the Krithia hill is the ravine known as "the Nullah." The Turkish entrenchments are established on both sides of this ravine and thousands of men have been sacrificed in the vain effort to take them. On Monday, November 15, another attempt was made and met with some success. Three tunnels had been run under the Turkish trenches and packed with explosives. At three in the afternoon they were blown up and a body of infantry composed of the Royal Scots, Scottish Rifles and Ayrshire Yeomanry charged

© *International Film Service*

FURTHER PARTICULARS

Charged with complicity in the plot to cripple our munitions factories, Robert Fay alternately offered and refused a full confession of Germany's plan to cut off our aid to the Allies

the trenches with hand grenades. The assault was supported by the fourteen-inch guns of two monitors and the cruiser "Edgar," which for three hours rained shells on the reserve positions of the enemy so that reinforcements could not be sent to points attacked. By this assault the British secured 160 yards on the east side of the Nullah and 120 yards on the west, and they were able to hold these positions against a counter-attack on the following night.

It is believed that Earl Kitchener, the British Minister of War, was at Gallipoli when the attack was made, tho whether it means that he intends to push the campaign in the peninsula instead of abandoning it remains to be seen. Sir Charles Monro, who succeeded Sir Ian Hamilton as commander of the British forces in the Mediterranean, recommended the withdrawal of the troops from Gallipoli, but possibly Earl Kitchener, after looking over the situation, may decide differently.

In reply to criticism in the House of

THE GREAT EARTH AVALANCHE IN THE

BEFORE WE HAD TIME TO CELEBRATE THE OPENING OF THE PANAMA CANAL IT WAS A MILLION CUBIC YARDS A MONTH EVER SINCE JULY AND STILL THE CHANNEL IS FILLED

Commons, Andrew Bonar-Law, former leader of the Opposition, but now the spokesman of the Government, said:

> Nobody feels more acutely than the Government the seriousness of the position. Every member of the House may be assured that in what the Government are doing or intend to do they will not be influenced by the idea that, having made a mistake, they will see it out. They will be influenced solely by what, under the best military advice, they believe to be the best course.
>
> Furthermore, however successful we may be, at the end of the war the British people will always remember with a feeling very much the reverse of pride that the small countries which we tried to save could not be saved by us, and that suffering in Belgium and Serbia, such as we would give everything in the world to avert, has followed while they are our allies.

Persia and Arabia

Altho we hear very little about what is happening in the Near East, there are many things to indicate that the Great War may soon involve this region. Reports of disturbances in India and fighting on the Afghan border are numerous but intangible. Bagdad is said to have been captured by the British Mesopotamian expedition with the aid of 12,000 Arabs, but there is no confirmation of this.

The German, Austrian and Turkish Ministers in Teheran have been for months laboring with the Shah in order to induce him to take up arms against the Russians and British who are invading Persia from the north and south respectively. German officers had begun the organization of a Persian army, composed in part of armed tribesmen and in part of Austrian and German prisoners who had escaped from Russia by way of the Caucasus. The Shah was supposed to have been persuaded to leave the capital and take the field with these forces. But the solicitations of the Russian and British Ministers, backed up by a party of Russian Cossacks from the Caspian, changed his mind and the Teutonic and Turkish Ministers left Teheran without him. Princes of pro-Russian sympathies have been given seats in the Persian Cabinet and the Shah has declared himself friendly to the Allies.

There are vague rumors afloat of risings in Palestine and of plans among the Jews in all parts of the world to overthrow the Turkish rule and establish an independent Jewish state. A movement to organize an Arabian state with equal toleration for all religions was nipped in the bud by the execution at Beirut of the leader, a Mohammedan lawyer educated in Paris, and eleven of his associates.

A more formidable insurrection in Syria is said to have been started by Djemal Pasha, the Minister of Marine in the Turkish Cabinet. He is reported to have roused and armed the Druses, a religious sect of about 100,000 living in Lebanon. The Arabs in various places are reported to be preparing to fight against the Turks, whose rule they have always resented. Whether these various revolts are instigated by the British and French, as Berlin believes, or not, they will certainly be an aid to the Allies if the Turks renew their attack upon the Suez Canal. A British force from India, landing at Aden at the mouth of the Red Sea, is said to be advancing northward into the interior of Arabia.

By the visit of the Viceroy of India, Lord Hardinge of Penshurst, on the last day of January, Koweit became a British protectorate and the penny stamp with the head of King George carries its outgoing mail. Sheikh Mubarek readily consented to haul down the Turkish star and crescent and hoist instead his own emblem, a red flag with the name of the country embroidered on it in white. Other Arabian sheikhs are taking advantage of the opportunity to throw off the sovereignty of the Sultan.

The Central Powers have broken thru the Balkan barrier and carried the war into Asia. The Kaiser is said to be going to Constantinople to superintend the despatching of an army to Egypt by way of Palestine. The British from the Red Sea or the Persian Gulf will meet them somewhere in Asia Minor, perhaps upon the ancient battle field of Armageddon, where, according to prophecy, the kings of the whole earth are to be gathered "to the battle of that great day of God Almighty."

Venice Bombarded

On the afternoon of November 18 an Austrian squadron of aeroplanes dropt bombs on Venice and its environs. According to the Austrian report the forts, arsenal, railway station, gas works and barracks were hit. The squadron returned in safety altho it was attacked by three aeroplanes and heavy gun fire. Verona, Vicenza, Udine and other Italian cities have suffered from similar visitations.

CULEBRA CUT DAMS THE PANAMA CANAL.

CLOSED AGAIN. THE GIANT DREDGES HAVE BEEN TAKING OUT THE DIRT AT THE RATE OF WITH ITS FLOW, AND STEAMERS HAVE TO GO AROUND BY THE HORN IN THE SAME OLD WAY

© Underwood & Underwood

This is the second time Venice has suffered from an air raid. The other was on October 25 when two Tauben and a biplane made three attacks during the night. Some twenty bombs were dropt, one of them in the Piazzetta not far from the Palace of the Doges. This was an incendiary bomb and if it had struck the old wooden roof of the palace the building would doubtless have been burned up. As it was the chief damage was the destruction of Tiepolo's mural painting of the Translation of the Holy House of Loretto, dating from 1743, by a bomb which crushed in the ceiling of the Scalzi Church of the Carmelites.

The Attitude of China President Yuan Shih-kai seems by no means disposed to abandon the proposed change of the form of government of China at the joint request of Japan, Great Britain and Russia. On the contrary his foreign minister visited their legations in Peking and informed them that a majority of the provinces had voted in favor of the re-establishment of the monarchy and consequently the question must be regarded as having been decided by the will of the people. It would, however, take some time to prepare for the grand ceremony and in the meantime the President would have to curb the natural impatience of the people for the realization of their hopes. It is rumored that President Yuan Shih-kai is much disappointed that the interference of Japan prevented him from carrying out his plan which is said to have been to proclaim himself Emperor in November, on the same date when the enthronement of the Emperor Yoshihito took place.

Great Britain, France and Russia have united in urging China to join their alliance. This if effectual would make a startling change in the war situation since it would mean adding a population of some 400,000,000 to the Allied side. Of course there would be no immediate increase in military strength and China is not expected to take part in the war in Europe, but in potential resources of men and natural wealth no other country could compare with China. The primary object of including China in the alliance is to put a stop to German intrigue, which is said to have been active in China of late. It is also hoped by this means to prevent future friction between China and Japan. Whether Japan favors this new move is uncertain.

Justice Hughes Declines Republicans in Nebraska, on the 13th filed with their Secretary of State a petition, bearing the required number of signatures, asking that the name of Charles E. Hughes, Associate Justice of the Supreme Court, be placed on the official primary ballot of the Republican party, as that of a candidate for the office of President, for the primary election to be held in that state on April 18, 1916. This was done without the consent or knowledge of Justice Hughes, and in opposition to the wishes he had exprest. At once he sent for a copy of the petition. Having received this, he sent to Nebraska's Secretary of State a letter in which he said: "I hereby notify you that I decline the nomination made by this petition, or similar petitions, and request that my name shall not be placed upon the ballot for such primary election."

Nebraska's Attorney General held that the name could be withdrawn only as the result of court proceedings. But the Secretary of State did not agree with him. He replied to Justice Hughes that in response to the request he would withhold the name. It is said that the petition movement was supported by the leading Republicans of Nebraska. It appears to have been approved by the member of the Republican National Committee for that state, who says to the press that the signers, altho they knew what Justice Hughes's attitude was, "wanted to give the people an opportunity to express themselves, confident that the verdict in Nebraska and elsewhere would be practically unanimous for his candidacy, thereby indicating one man, if not the only man, capable of uniting the Republican party beyond question." Justice Hughes has persistently discouraged all efforts to induce him to appear willing to accept candidacy or a party nomination.

Commissioner McCall Accused A New York legislative committee, of which State Senator Thompson is chairman, has asked Governor Whitman to remove from office Edward E. McCall, chairman of the Public Service Commission, formerly a Justice of the Supreme Court, and a prominent member

Harris & Ewing

OPPOSED TO THE PRESIDENT'S PLANS

Representative Kitchin, the Democratic floor leader of the House, is at variance with President Wilson's plans for national defense

of the Tammany organization. The charges and the committee's recommendation are in the Governor's hands, and it is expected that Mr. McCall will soon appear before the Governor to defend himself. For some time past the committee has been taking testimony about the Commission, and Mr. McCall has been one of the witnesses under examination. It is charged that he has been inefficient, has neglected his duties, has ignored complaints and offences which were brought to his attention, and that he owned, when he was appointed to the office, and still owns, stock in a corporation subject to the Commission's rules, and has voted on orders by which the corporation was affected. The stock in question is 387 shares of the Kings County Light and Power Company, worth about $50,000, which has stood in the name of one of his clerks, and which, Mr. McCall testified, he had transferred to his wife, altho there is no record of such a transfer.

The stock appears to have come to him from one Andrew Freedman in 1908, while Mr. McCall was on the bench, and to have been used as security for loans from Freedman. Two years after the stock was acquired, the company and one associated with it went to court in opposition to an order from the New York municipal government. The case came before Judge McCall. After much delay he discovered that he was disqualified by the ownership of the stock, and after additional delay a referee was appointed, before whom the case is even now still pending. It is alleged that Mr. McCall's action in the commission has been favorable to the company and allied interests. The charges also assert that his action has been unjustly favorable to other corporations.

Mr. McCall, a brother of John A. McCall, formerly president of the New York Life Insurance Company, was not overlooked in the Hughes investigation of the insurance companies. He has been a beneficiary of Tammany, whose nomination placed him on the bench from 1902 to 1912, and in his judicial selection of receivers and referees Tammany men were constantly favored.

Trust Cases The Department of Justice has directed the Federal District Attorney in Philadelphia to inquire concerning a combination alleged to have been formed in violation of law a few months ago by manufacturers of paper board. In Boston, the District Attorney has been instructed to make an investigation concerning a reported combination made by the United Drug Company and the Riker-Hegeman Company, which owns a large number of retail stores in several cities.

In the suit against the Reading Railroad Company and its subsidiaries or allies in the coal trade, which was lost by the Government by a decision in which three Federal District judges concurred, the Department of Justice has filed an appeal in the Supreme Court.

There is on trial in Philadelphia a suit, begun four years ago, in which the receiver of the Bluefields Steamship Company seeks damages in $15,000,000, under the Sherman act, from the United Fruit Company, alleging that the latter violated the law by monopolizing transportation in the tropical fruit trade.

Labor Disputes The school teachers in Cleveland, Ohio, have lost their contest in the courts for the reinstatement of six teachers, officers of their union, who were removed by Superintendent Frederick in obedience to orders from the Board of Education, because of their prominence and activity in the union movement and in the project for affiliation with the Federation of Labor. The Court of Appeals decided that the Superintendent was justified, and this decision has now been sustained by the Supreme Court.

About 350,000 engineers, firemen, conductors and trainmen are members of the four railway brotherhoods or unions which are preparing to make a formal demand for an eight-hour day with the pay now given for ten hours. It is expected that ballots for a referendum will be distributed in December, and that the demand will be made in March next. In Fairmont, West Virginia, 25 carriers and clerks employed in the post office are on strike, as a protest against the dis-

[illegible]

missal of W. H. Brand, the assistant postmaster, and three clerks. The charge was that they had improperly given assistance to applicants before the Civil Service Commission. Dismissal had been recommended by the Commission, and the action taken was approved by the Post Office Department. But postal inspectors are now to make an investigation.

In several places strikers were punished last week by the courts. In Meriden, Conn., where 1000 employees of the International Silver Company have been on strike for six weeks, a party of strike-breakers was attacked by them. There was a riot and many shots were fired, but no one was seriously wounded. Twelve of the strikers have been sent to jail for sixty days. At the railroad yards at Long Island City, near New York, where 500 car cleaners have been on strike, 18 men and 10 women were arrested for destruction of railroad property. Each man was fined $10 and each woman $5. In West Virginia four strikers, one of them a woman, have been sent to prison for six months for contempt of court during the coal strike which took place some time ago.

There have been riots in Wilkes-Barre, Pennsylvania, where the street railway employees are on strike, and in Cleveland, Ohio, where the workmen in a factory which has war orders quit work some weeks ago. Eight men were arrested in Cleveland. The Westinghouse Company's striking machinists in Pittsburgh are at work again, with their wages increased by eighteen per cent.

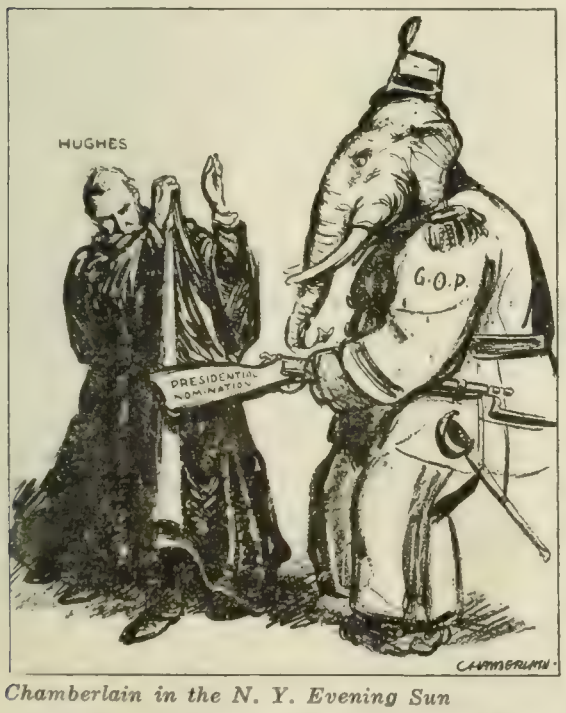
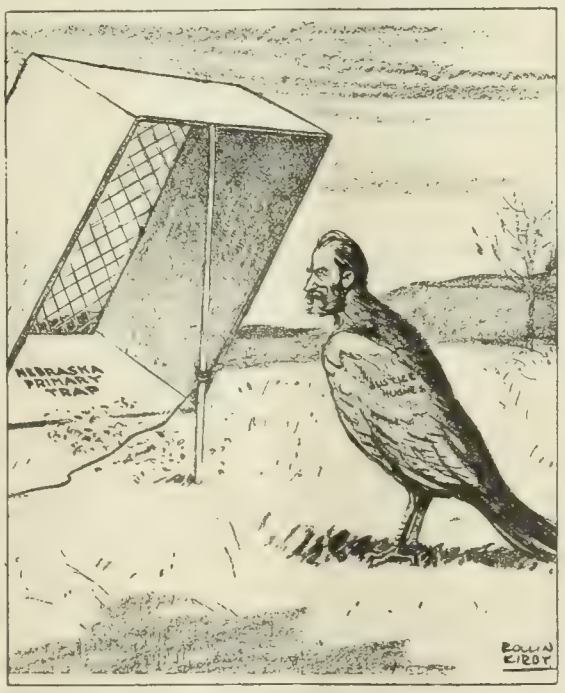
THE PIERPONT MORGAN OF JAPAN



Baron Eiichi Shibusawa, who is making a visit to America

Carranza and Villa

The three Carranza armies were closing in upon Villa, at the end of last week, but he had not been crushed. Leaving Naco he went southward, and it was expected that his first battle would be with the army coming up from Torreon. Obregon, with 6000 men, was following him from Agua Prieta, and his advance guard had a skirmish with a part of Villa's army, which now, it is said, is composed of not more than 8000 soldiers. There have been many deserters; 400 who accepted Carranza's offer of money and amnesty, have been carried thru United States territory from Douglas to Eagle Pass, and several hundred more are waiting for transportation.



The Yaqui Indians who formerly fought under Villa have recently been guilty of many outrages. Joseph W. Tays, the son of an American civil engineer who has a ranch at San Blas, in Sinaloa, was captured by them while traveling with six companions not far from his home, treated with great brutality and then shot. Four of his associates were put to death at the same time. A few days later the Indians killed four Americans and one British subject at the works of the United Sugar Company, in Sinaloa. Thirty-three other residents of the same place escaped to the coast and were taken for safety on board an American gunboat.

At the capital the Carranza Government is examining the banks and insisting upon reforms that affect saloons. The currency problem is an extremely difficult one. To the large issues of paper put in circulation by the several revolutionary leaders have been added a host of counterfeits. Two counterfeiters were publicly executed last week. Many followers of Zapata have surrendered.

WILL THEY RESORT TO CONSCRIPTION?

Kirby in the N. Y. World

A WISE OLD BIRD

MR. JUSTICE HUGHES AND THE PRESIDENCY

FROM STATE TO STATE

ARIZONA: The United States Supreme Court has annulled as unconstitutional the Arizona anti-alien labor law enacted about a year ago by vote of the people of the state under the initiative process of legislation. The statute required employers of more than five persons to employ not less than eighty per cent qualified electors or citizens.

ARKANSAS: On the theory that in every county in Arkansas there are many people anxious to undertake a carefully planned course of home study, the extension division of the University of Arkansas, cooperating with the United States Department of Agriculture, is offering six courses of eight lessons each which are to appear from week to week in at least one newspaper in each county and in many more papers in some of the counties. More than 100 newspapers will publish the lessons.

CALIFORNIA: Public spirited citizens at San Francisco, realizing that with the closing of the great exposition the people of that city are going to find ordinary entertainments rather tame, are gravely discussing various plans for keeping the public interest from lapsing. Since last February the city has had almost daily entertainment lavished upon it, but with the passing of the "Dream City" and the withdrawal of the many celebrities who have been its guests, the return to former social functions will be, it is feared, too abrupt unless something is done to "break the fall." The leaders are therefore considering various projects for the accomplishment of this end, among them being a stirring campaign to bring the Republican national convention to that city.

COLORADO: The Supreme Court of this state has taken original jurisdiction in an agreed case to determine whether the state has a right to enforce in the City of Denver the state prohibition law which is to go into effect the first of next year. The state claims that, under the constitutional amendment and legislative enactment, the manufacture, importation or sale of liquor in Colorado after January 1 will be illegal and that the state possesses authority to enforce these enactments. The city argues that it is operating under a special charter granted by the Legislature giving the city the right to control the manufacture, sale or gift of intoxicating liquors.

CONNECTICUT: It it said that by the end of this year Bridgeport will be the world's greatest arms and munitions producer. Orders already placed by the entente powers there are said to be not less than $160,000,000. When the buildings now nearing completion are ready they will cover a space a mile and a half in length and nearly an eighth of a mile in width and will accommodate 24,000 employees whose monthly wages will approximate $3,250,000. One plant consists of a building a mile long with thirteen wings, six smaller buildings, an immense power house and six acres of underground storage vaults. The main building is five stories high. With the six other buildings the total floor space of the plant is about eighty acres. The grounds are surrounded by a high barbed-wire fence, and there is an armed "sentry" every twenty-five yards.

DISTRICT OF COLUMBIA: It is expected that the floral decorations at the wedding of President Wilson and Mrs. Galt will be the finest ever seen on such an occasion in this country. The scientific forcing and retarding of blooms in the greenhouses of the Executive Mansion have been going on for months and many unseasonable blossoms will be the result. It is rumored that some particularly rare orchids have been nurtured for the occasion, tho the orchid house has been kept carefully locked for some time against curious eyes.

KANSAS: More than 2500 wheat growers in southwestern Kansas are selling their wheat directly to the miller or shipping it for export thru their own central agent located at Hutchinson. Approximately 1,000,000 bushels a month can be handled thru the elevators of the association. Also thru this organization they are buying their coal, flour and other general necessities. They buy from themselves and sell to themselves at regular market prices and divide the profits from both operations pro rata among the members of the association.

LOUISIANA: At a recent meeting of representatives of civic, social and commercial organizations of New Orleans a very large majority favored proceeding with the work of stamping out bubonic plague by ratproofing all the buildings of the city. It was reported by the health service that eighty per cent of the property in the city had been already ratproofed. The meeting provided for extending aid to owners of the remaining twenty per cent who are unable financially to do the work themselves and for applying drastic measures to those who are able.

MARYLAND: The big industrial developments in the Curtis Bay section are likely to cause a spirited railroad war. The Baltimore & Ohio road at present has a monopoly. The United States Asphalt Company recently tried to break it by declaring its own spur tracks to constitute a railroad but the Public Service Commission refused to accept them as such. Now it is said the Pennsylvania and the Western Maryland railroads will jointly enter this territory by means of spurs designed to carry cars from their terminals to the $6,000,000 worth of plants on the 700-acre development, and lively competition in accommodations, if not in rates, is anticipated.

MASSACHUSETTS: Afternoon classes in English for immigrant women are being conducted as a part of the Boston public school system. It is an entirely new departure. The need of it was found in the fact that, while the immigrant child is sent to school by law and the immigrant man finds it necessary to learn the language of the country, the immigrant woman, being under no such pressure, remains at home and learns little. As a consequence she is outstripped in the matter of education by her husband and children.

MICHIGAN: The most bitterly contested election ever held in this state was that at which the voters of Detroit refused to sanction the purchase of the Detroit United Railway by the city. The proposition on which the vote was taken after a long and acrimonious campaign was that first the people should vote to buy the road and that then the Wayne County (Detroit) Circuit Court should fix the price to be paid. This was called the "Blank Check" plan. The majority against the purchase under this plan was about 3000, but since a three-fifths vote was required to carry it, the proposition was defeated by more than 8000.

MISSOURI: The thousands of motorists crossing Missouri this summer and fall on sight-seeing tours have aroused the people of this state to such enthusiasm for good roads as never was known here before. Already hundreds of miles of excellent rock roads have been completed and more hundreds of miles are provided for. Only a few short gaps remain unfinished along the Old Trails route from St. Louis to Kansas City. It is expected that before next summer's travel begins this main highway and the other from Hannibal to Kansas City will be ready for use, if not wholly macadamized. The northern route is to be known as the Blue Book road. It connects with the road from Indianapolis and with the one from Chicago. Also a main road north and south thru the state is projected as a link in the Jefferson Highway.

MONTANA: Figures just given out by the State Board of Equalization indicate that the assessed valuation of property in Montana for purposes of taxation is $439,785,918, an increase of about $27,000,000 over that of 1914. The largest part of the increase is outside the cities. Much of it is due to the growth of small towns, but farm lands alone have advanced in value more rapidly than city realty. Contrary to the general belief that the livestock industry of the state had fallen off, the valuation is placed at $6,000,000 above last year's.

NEBRASKA: According to the semi-annual report covering fifteen days in October, the Omaha postoffice handles parcel post packages at a lower cost than that of any other city in the United States. Last year the October total showed that this office handled 72,310 outgoing and 40,324 incoming parcels at an average cost of about one-fourth of a cent each. Of the incoming packages 27,431 were delivered by regular carriers without extra cost; 2404 by substitutes on foot at a cost of 3.1 cents each; 4463 by automobile at a cost of 1.83 cents each and 7280 by horse-drawn vehicles at a cost of 1.4 cents each.

NEW JERSEY: Reports received by the State Department of Health show a greater quantity of food in cold storage in New Jersey this fall than at any corresponding time in many years. As compared with last year the excess amounts to more than 3,000,000 eggs, nearly the same number of pounds of butter and cheese, more than 1,000,000 pounds of poultry, more than 2,000,000 pounds of fresh meat and about half that quantity of salt meat. The supply of fresh fish shows a falling off of more than 1,000,000 pounds and that of salt fish nearly 200,000 pounds. There is also a slight decrease in the quantity of green fruit, but practically all other foods are stored in larger quantities than heretofore.

OKLAHOMA: The Wichita National Forest in Oklahoma, which is also a Federal game preserve, is now the home of a large and rapidly increasing number of buffalo, elk and antelope, animals which had become nearly extinct in this country. Since the wardens and forest officers began to protect these animals not only from hunters, but from wolves, wildcats and other predatory beasts, the several herds have improved in numbers and condition. There are now sixty-two buffalo and large numbers of other game animals. In driving away the predatory beasts the Forest Service has also promoted the interests of local stockmen who graze several thousand head of cattle on certain allotted areas within the preserve.

OREGON: The case of a Portland grocer arrested for opening his store on Sunday is provoking statewide discussion. He fought the case on the ground that the Sunday-closing law is class legislation in that it permits the opening of meat markets but bakers, grocers who sells fresh fish and other perishable foods; permits druggists to sell ice cream, sodas and cigars, while granting the same rights to confectioners and tobacconists. He further contended that his store supplies many customers who live on refrigerating facilities and must buy every day in order to have fresh, wholesome food. Judge Bean said most of the points were well taken, but held the ordinance valid and fined the storekeeper. The grocer pointed that the law be made so that he might operate, saying he would carry the case to the United States Supreme Court if necessary.

PARIS WITH A DIFFERENCE

LEAVES FROM A WAR-TIME NOTE-BOOK

BY HAROLD J. HOWLAND

ASSOCIATE EDITOR OF THE PUBLIC

TO draw the portrait of a great city is as nearly impossible as to "indict a whole people." The task demands too huge a canvas. The drawing must be done at the same time with too broadly sweeping strokes and with too much meticulous detail. I would paint a picture of Paris after fourteen months of war. But the thing cannot be done. I can only tear out of my notebook leaves filled with rough notes and random sketches.

The First Leaf
THE BEAUTY AND THE CHARM OF PARIS

One can imagine many reasons for coming to Paris at any time—some good, some not so good, some far from good. But there is one that ought to overshadow all the rest—that Paris is beautiful. It is beautiful itself, and it is full of beautiful things. Now the beautiful things are hidden away in these uncertain days, but for the rest——

To stand in the Place du Carrousel and look up the splendid stretch of the Champs Elysées to the culminating majesty of the Arc de Triomphe is to marvel at the creative genius of man and to wonder that he has been willing to make so many cities of the world commonplace and consecrated to the dreary god of utility. To drive about the city in a fiacre—thanks be to the war that has taken away so many swooping motor taxis and brought back so many of their leisurely, cosy predecessors—and catch glimpse after glimpse of fine vistas framing stately churches and dignified public buildings, of splendid parks, of worthy monuments, of broad spaces and noble avenues, is to record upon the tablets of the mind an indelible impression—Paris the beautiful.

This impression the war has done nothing to efface; nor can it—unless and until the enemy shall succeed in meting out to Paris the grievous fate of Rheims. The beauty of Paris is unscathed; the charm of Paris—ah, that is another thing. But here I hesitate. To say that Paris has lost its charm is to say too much. But it is only by saying something like that that I can express what I mean. But let us change it a little. The beauty of Paris persists; the charm of Paris is veiled, hidden, supprest. For beauty and charm, I take it, are two things. A statue in cold marble or a body in cold flesh may have beauty; only a warm and living woman can have the more precious attribute. It was not until the kiss of the Prince fell upon her lips that the beauty of the Princess was infused with charm. Paris is not dead—but surely Paris sleeps. Where are the gayety, the lightness of heart, the sparkle, the verve—in a word, the charm, of yesteryear?

The Second Leaf
A NOT ILL NATURED COMPARISON

It is inevitable that a visit to Paris after London in these dun days should provoke comparison. The temptation is irresistible, but in yielding to it I would be absolved from the charge of invidiousness. The comparison is inevitable, but so is the difference. For Paris has heard the guns of the enemy clamoring at the gates. London, save for the irritating but on the whole negligible stings of the enemy's insect swarm, is untouched. Paris is the capital of a land whose richest acres lie in the alien's grasp. London is the heart of a country lying inviolate behind the walls of oak now turned to steel. England knows war at arm's length; France feels it gnawing at her vitals.

So London "as usual" is by no means an absurdly inaccurate phrase. Paris "as usual" can express only a pious hope and a grim determination.

Curiously enough, while London is full of soldiers, Paris is empty of them. London streets swarm with them, London restaurants are yellow with khaki, London music halls draw half their income, at a snap guess, from Tommy—and his officers. You sit beside them on the busses and in the tube trains, you stumble over them on the grass in the parks. Half the girls in London hang on uniformed arms, half the people in your hotel seem to have come up from the country to consort with soldier sons and brothers and husbands and sweethearts on leave.

But in Paris the soldier is, comparatively speaking, infrequent on the boulevards and avenues, in restaurants, theaters, cafés and hotels. In the French capital the misty blue of the uniform puts accents into the picture; in the British capital the greeny yellow of the khaki mellows the picture's entire tone.

The soldiers of Paris are different, too. The boys in khaki look just that—boys who have put on khaki as a new dress and are not yet quite accustomed to it. The men in blue wear their blue as tho they had spent years instead of weeks in it, as tho they had worked and lived and, perhaps, suffered in it. Their uniforms are worn and faded—and many of the faces match the clothes. There is just the difference. England has a great army in the making; France has a great army in being, which has toiled and fought, and still goes back to toil and fight again. It is the masses of the material being molded into the new British army that one sees in London; in Paris it is bits of the splendid French war machine, released for a moment from their appointed places in the mechanism. For France has been forced by geographical position and the grim shadow over its frontier of a threatening miltiarism to be a military nation. England, snug behind the ramparts of the British fleet, could wait to create its army when the need should arise.

Another suggestion of the same difference. On every bare space in London flaunts a gaudy poster, one of a hundred different designs, exhorting loyal Englishmen to enlist to fight for king and country. In Paris here and there hang the torn remnants of a single uniform announcement tersely declaring that general mobilization is ordered for midnight on the second of August, 1914. England called, and still calls with ever greater earnestness, for volunteers. France merely notified men trained and ready that the hour had struck.

The Third Leaf
ALONG THE STREETS OF PARIS

An entirely adequate reason for coming to Paris at any time is to *flâner*—the word is untranslatable, but the act of contemplative loitering, of philosophic idling, has a universal human appeal. The streets of Paris are the *flâneur's* Promised Land. A Barmecide shopping tour—but that is tautology, for all shopping as distinguished from buying has the exotic and insubstantial quality of a Barmecide feast—skirting the treasure houses of the Rue de la Paix, or among the antique shops of the Boulevard St. Germain and the Quartier Latin, or thru the haunts of tomorrow's fashions in the Faubourg St. Honoré, or by the print shops of the Rue de Rivoli and on the Rive Gauche, provides the stuff the *flâneur's* dreams are made

of. He loves a sentimental journey among the embodiments of feminine charm that throng the Elysian Fields and the Wood of Boulogne on an afternoon of early fall sunshine, falling in love at first sight a dozen times in an hour and out again as promptly at the first sight of the next comer. The hour of the appetizer, that twilight interval between the business of the day and the business of the evening, is the *flâneur's* hour. Then he takes his ease at his sidewalk café over a long drawn out glass of coffee, a *sirop au vin blanc*, the insidious essence of wormwood, or the incomprehensible sugar and water. Then he surveys the passing world with a reflective eye and finds it good.

But *nous avons changé tout cela.* Or more accurately, the gods of war have changed it all. Paris is too sober to *flâner*, too sombre to *flâner* in. Many of the shops are closed—"closed on account of mobilization" runs the legend on the shutters. Practically all of them lock their doors for a couple of hours in the middle of the day because of a depleted staff. It is not good form to buy lavishly and to indulge in luxuries. France needs the last *sou* in the toe of the last stocking-bank; and when a nation is sternly practising self-denial it is no time for the individual to spend with a careless hand. So one *flâners* among the shops, if one does it at all, shamefacedly and a little furtively; and one does it almost alone, for Frenchmen have no heart for business.

The restaurants and cafés are deserted. I use the word not carelessly and figuratively, but with deliberate literalness. It is not so in London; but in Paris it is. Not only the smart ones—that was to be expected, but the simple, every day ones—that is almost pathetic. One lunches at Armenonville, one of the most famous of the outdoor resorts in the Bois de Boulogne, where Paris on a splendid October day should be seen at its gayest—and lunches in impressive and depressing solitude. One goes to Marguery's for the renowned *Sole Marguery*—the sole is there delectable as ever, but a wilderness of empty tables somehow makes it taste flat in the mouth.

Another day finds me strolling at the hour of *dejeuner* in the Boulevard St. Germain. An opportune little restaurant—and the little restaurants of Paris have nothing in common with those of my own land save their size—catches my eye. I enter and sit down behind a tiny table with an appetizingly clean cloth. The soup is good, the omelet French—there is no higher term of praise—the *plat du jour* savory, the cheese sound and ripe, the fruit a little withered perhaps, but not ill-flavored, the coffee hot and no more embittered with inevitable chicory than was—inevitable. I lunched not merely passably but well. Tables were ready for a score or more—I lunched alone. With the cheese another table was set in the opposite corner, and Madame, descended from her stool behind the desk, the solitary waiter, and, I suspect, the cook, lunched too. But patrons there were none.

The waiter, as he poured out my coffee during an interval of his own repast, satisfied my curiosity. Monsieur was mobilized and at the front. He himself was too old to fight—as yet. But who knows? Perhaps even his time might come. Yes, this was a not unusual thing in these days. Patrons were few. In other times a dozen at the worst, twenty, even thirty perhaps, would I find lunching here a day like this. But so it goes. It is the war. The war takes everyone.

So is it everywhere. The restaurants deserted, the cafés patronless. Even the streets seem strange for Paris, where the streets ought to be alive and gay. There are no men of military age—*ça va sans dire*—for Frenchmen all are soldiers now. There are no motor busses hurtling thru the streets—and Paris without these Juggernauts is safer surely, but hardly natural. Once out near the front I found the reason why. An old familiar shape came trundling down the road, familiar and yet odd in grim war gray with bulging load of precious war supplies. Mobilization has taken the busses too.

The streets by night—a greater difference still. The picture that the words "Paris by night" call up—*ça n'existe plus*—there is no such a thing. In place of brilliancy we find a gruesome dusk; in place of pleasure hunting throngs, hurrying or loitering as the purpose suits, a sprinkling of passers-by, groping their way toward home or other goal. The sidewalk groups of chairs and tables outside cafés that make in better times the outdoor life of Paris a thing to conjure with are empty now. None sit and sip and chat and watch life flowing by. Those that are left go early home to bed.

The Fourth Leaf
THE CHANGING OF THE GUARD

After three weeks of London, punctuated by four pleasant little visits from earthquake dropping Zeppelins, and other three weeks of Paris with tranquil nights and no sign of hostile visitors, one finds oneself wondering Why the difference? Paris is only half as far from the enemy's lines as London. It offers as fair a mark. Why no bombs for months and months? Gradually one gets a glimmering of a possible explanation.

Each afternoon between four and six a little spectacle is staged that never fails to fascinate. If I am in my hotel room a giant humming comes dropping down the central court on which my windows look. It sounds like nothing but a monster vacuum cleaner hard at work. It never fails to draw me to the street. There overhead a monster bird wings its way across the sky. Slowly, perhaps a little wearily, it flies, from east of north to west of south. It comes from out that quarter where the fighting is. Then comes another from the opposite compass point. No weariness to this one's flight; it shoots along like cloth-yard shaft from good yew bow. They meet and pass and vanish, each to its appointed goal.

It is the changing of the guard. Each hour of the day—and night as well, as you shall see—four faithful birds like these mount guard above the city, and sail and dart and skim about, and watch and watch and watch. If need arise they can do more than watch, for to swift wings they add sharp beaks and ruthless claws.

It is my last night in Paris, a "wonderful clear night of stars." Loitering across the Place de la Concorde to my hotel, my head is in the air. It always fascinates when in a distant land to con the stars and find all there the old familiar ones of home. Jupiter, an incandescent globe, commands the sky. But what's that other star just there that glows as bright as he? The planets do not shine in pairs like that. And look! This one has moved, is gliding steadily across the sky. Right overhead it goes from east to west. Once past the zenith it begins to shrink, and dwindles slowly to a point of light that presently snuffs out. But soon the point of light is there again, growing and growing till this second planet rivals Jupiter again. Then once more it shrinks and vanishes off in the east.

Again it is the changing of the guard. Our lawless planet waning and waxing and waning again is but a biplane watching with sleepless eye above the sleeping city. No hostile aircraft minded to drop its bombs on helpless folk but shall run a gantlet perilous. Come it by day or come by night, the guard is there waiting and watching and ready armed to fight. One reads of London raids, "our aeroplanes went up." In

Paris, if the raid should ever come, "our" aeroplanes *are* up.

The Fifth Leaf
LE DERNIER CRI

Among those many reasons for coming to Paris what more compelling one than to see the fashions. It is only in Paris that one finds *le dernier cri*, the style not of yesterday nor even of today, but of tomorrow and the day after. As I write, I find in a morning journal a complaint from manufacturers in Switzerland that they are in perplexity about modes, "because Paris, which used to give the lead in regard to innovations, does not do so now." It is a sad predicament for the rest of the world. It cannot be fashionable, for there is no one to set the fashion. Paris has laid aside for a sterner task its time-honored leadership in the gentle art of dressing as everybody else does now in order to dress as nobody else did last year.

So it would seem. But Paris is incorrigible. The habit of *le dernier cri* is ineradicable.

It shows itself in many little ways. For instance, it is the new fashion —an inflexible code—not to linger at dinner in a public place after half past ten. (Besides the lights go out.) There is no longer any evening dress; for men the morning suit for dining out and for the theater, for women the tailor made in somber tones.

These be now fashions, but there is one more striking than all—and more popular. It is a simple style, not depending for its effect upon exaggerated lines or startling color schemes. One sees it everywhere. One cannot pass a dozen women on the street that one of them does not affect this newest mode. It is a versatile style, adaptable for morning wear, the home, the street, receptions, luncheons, dinner, for work, for leisure, for every kind of life—save one, I think. One does not play in it, for if one wears it one is disinclined to play at all.

It's *chic*, this style; what *mode Parisienne* is not? It has that grace of line, that artistry of cut, all that I-know-not-what that proves the French modiste an artist, not an artizan. All classes wear it, from the gracious *femme du monde*, costumed by Paquin, to the pert *midinette*, whose dress is but the product of her nimble fingers and the midnight oil. It is worn by young and old; but more, it seems, by young than old—a startling, saddening thing. In fabric and design it is a varied style, only in color is it uniform. There persists a dreadful monotone. For it is black, all black, unvaried, unrelieved.

It is the widow's costume. On every street, in every shop, one almost thinks in every home the widows of the men of France who give their lives that France may live wear the glorious dread regalia of their sacrifice.

The Last Leaf
AND WHAT OF FRANCE?

Thus my rough notes on Paris. But what of France? With what spirit do the people of the pleasant land face the future and the task that still is theirs?

For the answer to such a question one cannot give chapter and verse. One does not find the whole answer anywhere—one finds its elements everywhere. It is in the air like the tone of a vibrant autumn day. It thrills the nerves like a charged electric atmosphere.

It is sad to see France so changed. But France is not sad. France suffers but its spirit does not quail. France bleeds but its courage mounts only the higher.

France has but one mind, exprest in the word of the Apostle, "This one thing I do." France is stoical under its affliction, united in its unflinching purpose, aroused, unfaltering, determined. Whatever may be the outcome, France will endure to the end.

Paris

THE INVASION OF THE GARDEN OF EDEN

HOW THE BRITISH ARE FIGHTING THEIR WAY UP TO BAGDAD

IN the earlier months of the Great War attention was concentrated upon central Europe, for it was thought that whatever took place elsewhere would have no influence upon the final issue of the struggle. But now it seems likely that the deadlock in France may remain unbroken and the war and its terms of settlement be decided by what is done in the Balkans, Asia, Africa and the Pacific. When the final history comes to be written it is quite conceivable that more consideration will be given to the anabasis of the eleven thousand British who fought their way up from the sea to Bagdad than to the fruitless fighting of the millions in France and Flanders.

There is another reason why the outside world has paid little attention to the campaign in Mesopotamia, and that is because little has been heard of it. No war correspondents infest this field; no English newspapers are published there, if we except the *Basra Times*, which the British soldiers get up at intervals of leisure. The official organ of the British Government, the *London Gazette*, does not mention it because it is not under the direction of the War Office but of the Indian Office. The Mesopotamian expedition is sent out, as tho it were a mere raid into Afghanistan, by the Government of India, and, strictly speaking, Lord Hardinge instead of Lord Kitchener directs it.

On November 6, 1914, the day after England declared war on Turkey, the expedition embarked at Bombay. On November 14 it was steaming up the Shatt-el-Arab. Now, a year from the time when they started, they are close to Bagdad, 400 miles from the head of the Persian Gulf. While the Turk has kept his front door barricaded the British and Russians have entered at the back. Should the Germans succeed in forcing their way thru the Balkans to Constantinople they will find the hated English already in possession of the territory which they have long coveted.

Once before the English forestalled them in this same region. For the Germans attempted the peaceful penetration of Asiatic Turkey before they resorted to arms. Thirty years ago they looked forward to the time when the Elbe River should be joined to the Persian Gulf by double bands of steel and the station master in Hamburg might call out in the American fashion, "All aboard for Berlin, Vienna, Belgrade, Constantinople, Bagdad, Koweit, and all points east!" Quite obviously the German *Bagdadbahn* was designed as the overland route to India, and this the English could never endure.

The Germans began the railroad in 1888 at the Sea of Marmora, and in 1899 they got from the Ottoman Government a concession for its continuance to Koweit on the Persian Gulf. But when the German Consul General of Constantinople went to Koweit to arrange the terminal facilities on the Gulf he found that the British had got ahead of him. The Sheik of Koweit, tho nominally a vassal of the Sultan, had been induced

THE NEW BATTLEFIELD OF THE GREAT WAR

Asia Minor seems likely to be the scene of the next great conflict. The British forces proceeding up the Tigris and Euphrates from the Persian Gulf have almost reached Bagdad. The Russians are coming down from the north. An army of Turks under German officers, preparing in Constantinople, will advance along the line of the German "Bagdad railroad" which is said to have been carried last summer 150 miles beyond Aleppo

to make a secret treaty by which he came under the "special protection" of Great Britain and agreed not to cede any land without the knowledge and consent of the British.

Now a railroad that started at Constantinople and ended somewhere in the desert was obviously not a paying proposition. So when the Germans found the outlet at the Persian Gulf closed to them they tried for a more northern route leading thru Persia. But here again they were outwitted by British diplomacy. In 1907 Great Britain suddenly struck hands with her ancient foe, and Persia was virtually partitioned between the two powers, Russia taking the northern and Great Britain the southern part as their respective spheres of influence. The Persian people rose and established a constitutional government. They appealed to America for help and an energetic young financier, Morgan Shuster, was sent to reorganize their finances. What happened to him may be read in his book *The Strangling of Persia*. He made the mistake of thinking that the Russian and British Governments meant what they said when they pledged themselves to respect the integrity and independence of Persia, and because of his naive faith in this "scrap of paper" he was forced to leave. In the present war neither Russia, Great Britain nor Turkey has paid any attention to the neutrality of Persia. Turkish troops have ravaged the province of Azerbaijan. Russian troops have occupied the northern provinces since 1909. British troops entered the southern provinces in 1911. The Persian and Arabian towns on the Gulf are in British possession.

But we must in fairness admit that the partition of Persia would not be a bad thing on the whole, altho we may deplore the manner of it and regret that the Persians were not given a chance to work out their own salvation. Persia could not be left forever in ruin and disorder, and it was merely a question which of the great powers should undertake its development. The southern part, under British rule, will doubtless prosper as Egypt has, and even Russia may improve conditions in the northern part as has been done in Turkestan

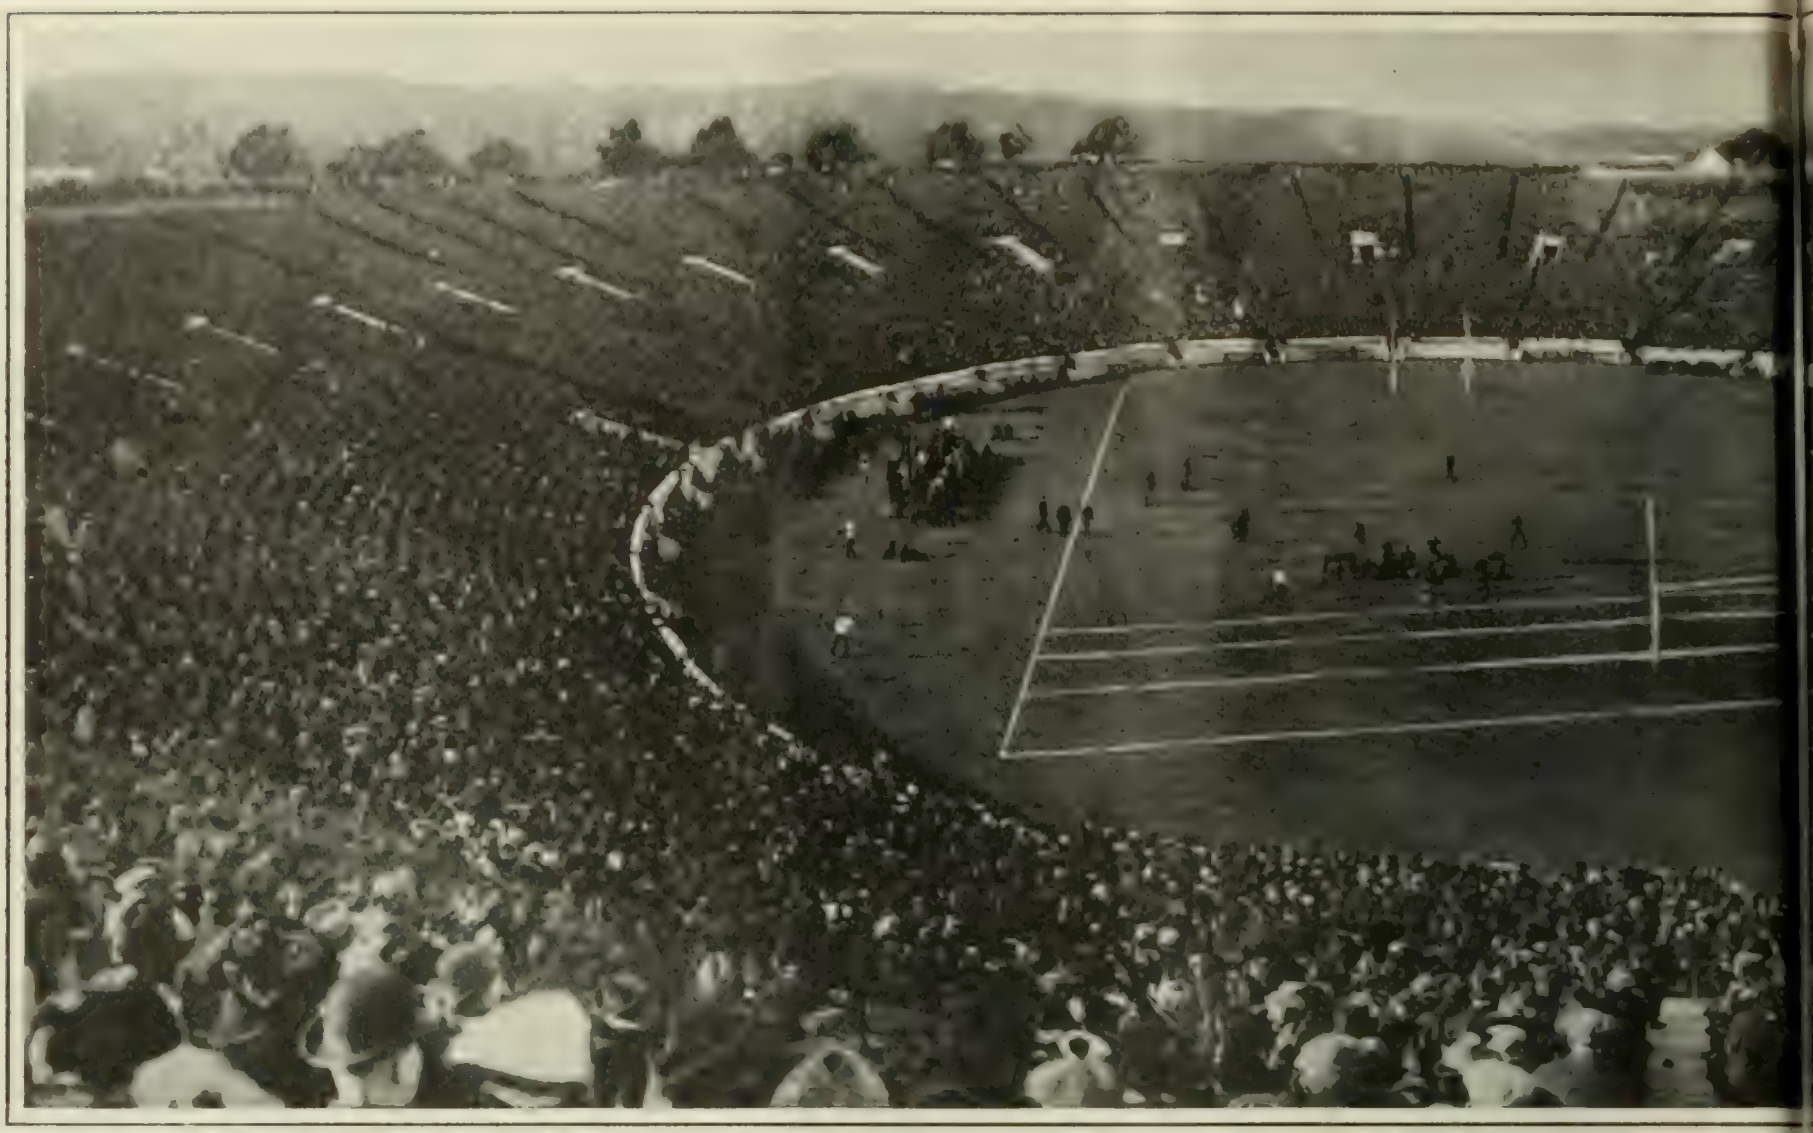
A hundred and fifty miles north of the Persian Gulf are the oil fields near the ancient Persian city, which, by a curious coincidence, bears the name of Shuster. A pipe line conducts the precious fluid to tidewater at the head of the Gulf. A few months before the outbreak of the war the British Government bought a controlling interest in the company in order to secure fuel oil for the navy. Winston Churchill of the Admiralty had difficulty in getting the appropriation thru Parliament because he could not at the time give any satisfactory reason why the Government should invest in such an unattractive proposition when it oil cheaper. Those who opposed the purchase in Parliament are now doubtless wishing the Government had shown the same foresight in other matters. It was calculated that this field would supply a million tons of fuel oil a year for the navy.

To guard this pipe line was the first essential and the British expedition was landed November a year ago at its outlet on the Persian side of the Shatt-el-Arab. Thence troops were sent into the interior of Persia to occupy the oil region about Shuster and others were conveyed up the river to the Turkish town of Basra (Busreh), which surrendered.

But in the spring the British were attacked here by a force of some 10,000 Turks and as many Arabs. A three days' battle ensued, in which the British were victorious against the overwhelming odds, tho at a sacrifice of 700 men.

Then they proceeded up the river and by the last of May had taken Kurna, which lies at the junction of the Tigris and Euphrates Rivers. Here the expedition divided. One party went up the Euphrates and by the end of July had taken Nasirjeh after prolonged conflict. The other proceeded up the Tigris, and on September 27 found the Turks under Nur ed-din Pasha occupying a

strongly fortified position extending some miles on each side of the river below Kut-el-Amara. The British attacked by air, water and land. Aeroplanes dropped bombs on the enemy's boats and bridges. Armored automobiles charged their cavalry. Big guns two miles away rained shells on their entrenchments. Gunboats fought their way up the river. The Turks were routed and fled toward Bagdad, a hundred miles further up the Tigris River. The British are in pursuit and expected soon to reach that city. The Russians advancing into Mesopotamia from the Caucasus are only 300 miles to the north at Van and Urmia, so it is quite possible that the British and Russians may meet in eastern Turkey, and then the Turks will be cut off from all help from the Persians.



The victory of Kut-el-Amara gives the British possession of what was once the richest region of the world, the site, perhaps, of its oldest civilization. We can all of us understand the feeling of the old woman who told her pastor of the delight she derived from hearing "that blessed word Mesopotamia," for the land is filled with religious, literary and historical associations. Between these great rivers ancient legend placed the paradise of primal sinlessness. Near Nasirjehe, where General Sir John Nixon defeated the Turks, was Ur of the Chaldees, the home of Abraham. A further advance of this force up the Euphrates will bring them to Babylon, "the glory of kingdoms, the beauty of the Chaldees' excellency." The two British forces will join at Bagdad, the beloved of all readers of *Arabian Nights*. Near by are the sacred shrines of both the Mohammedan sects, so the possession of Bagdad by the British will have a powerful effect upon the whole Moslem world.

This desert could again be made to blossom as the rose if it had good government. It is not a change of climate but the neglect of the irrigation ditches which has brought it to ruin. The Hindia barrage which Sir W. Willcocks was constructing before the war would bring once more the water to the land and restore its former prosperity. In the year 1913 the German imports into this region rose from two to ten million dollars. The dates exported in that year brought in more than $2,500,000. It is a rich prize and well worth the fighting for.

"SPORT MAY YIELD ITS BUSINESS VALUES, BUT NEVER ITS E
The Yale-Princeton Game

GRANDSTA

BY WILL

PRESIDENT OF REED C

ALL the chief evils of intercollegiate athletics center around the grandstand. Some of these evils are bringing such determined protests, from those who think that the larger interests of higher education are in danger, that our colleges must do more than trifle with the problems of grandstand athletics.

The first unhappy condition is that grandstand athletics are for the select few. Those in greatest need of the development to be gained from out-of-door sports are of smallest interest to coaches. Those who need athletics least are put under severe pressure to take athletics in excess. The larger the grandstand the greater the pressure. The larger the gate receipts the greater the temptation to professionalize sport. The higher the specialization of the few who are trained to win the big games the less the incentives for all the rest to play games.

It has long been the contention, and the argument is still heard in many colleges, that intercollegiate games are necessary to maintain interest in athletics. The assertion is not only inconsistent with the well-known traits of adolescent youth, when unspoiled by the business aims of intercollegiate athletics, but the assertion is also contradicted by decades of experience. Our colleges have had unbounded opportunities to show what the present system can do for all students, and have made the demonstration chiefly by exhibiting them on the grandstands. Reports from one hundred and fifty colleges justify the conclusion that at least sixty times as much money is spent by these colleges on each intercollegiate player as is spent on each other male student in the interests of intramural games.

It is true that much has been done at a few schools, among which Andover is notable, and at a few colleges, among which Cornell is notable, to get all of the students onto the playgrounds; but these efforts have been deliberate attempts to offset the influence of the prevailing system. Such success as a few institutions have attained has been *in spite of* the controlling features of intercollegiate athletics; and their success is exceptional, as I have observed by visiting nearly all of the colleg in the United States that have attained prominen thru the sporting pages.

On the other hand, the experience of Reed College, i the four years since it was founded, seems to indic that a college which has no intercollegiate athletics, a commits itself absolutely and enthusiastically to the p icy of out-of-door games in moderation for all stude for the sake of good sport and good health, will have a of its students frequently on the fields instead of on th grandstands. Sport may yield its business values, bu never its educational values, to those who merely wat the games and talk interminably about them.

To such an extent has grandstand athletics taken po session of the public mind that many people who hear o the opposition of Reed College to intercollegiate athletic conclude that the college has no athletics. They see puzzled when they are told that the policy was adopte before there were any students, or alumni, or teacher partly in the interests of athletics. They are surprise to hear that in a typical October week above ninety pe cent of the men of the college, including the faculty, re corded their participation in out-of-door games. And, they visited the campus, they would be surprised to s athletic fields without fences or grandstands.

Faculty and students at Reed College have no conflic of interest in athletics. In various sports, the faculty has a team and each class has a team. The faculty play ers were recently rated third in basketball, second i handball, second in baseball, and first in tennis. Fa ulty and students engage in the game with equal inter est, upon the same terms, under the same rules, and i the same spirit. Some people have called this remari

ATHLETICS

. FOSTER
PORTLAND, OREGON

ble. There is only one remarkable thing about it, namely, that all are engaged in athletics for education. Where the aims of professional athletics, as dictated by the grandstand, are rated at their true value, no conflict is likely to occur between the interests of students and of faculty.

Bad as are the physical, financial and moral extravagances of intercollegiate athletics, as at present conducted by most institutions, it sometimes seems as tho the arch crime were the death blow to the pure joy of the game, struck by the frantic desire to win. At the first meeting this fall of the candidates for the football team of the University of California, the coach said, in effect: Football is business, not fun; let no man join this squad unless he means business. Any coach can truthfully say as much. It is serious business for him and it is his business to make it just as serious for all his men.

It cannot be otherwise as long as the whole system is organized on a business basis. To win, to take in money, to get advertised—these appear to be the three aims of professionals, whether in the ring, on the race track, or on the diamond. And these are precisely the dominant aims of intercollegiate athletics. They are, in a large measure, antagonistic to educational aims—the physical development of everybody, spontaneous and care-free play, and moderate recreation as a preparation for something more important than games. These larger possibilities of all out-of-door sports can be attained for all college students only by cultivating a spirit antagonistic to the spirit of grandstand athletics.

Cut in the stone front of the Hubbard Grandstand at Bowdoin College are the noble words of the donor: "Fair play, and may the best man win." When that ideal has become as durably impressed upon the minds of our college communities, including our grandstand extension auxiliaries, there will be an end of some of the evils. But not the end of all evils. Not until we see clearly the relative importance of various aims of sport, shall we be able to say, "May the best man win," and add, "It matters little who wins."

In a profoundly philosophical address on "The Limit of Sport,"[1] Dr. Guglielmo Ferrero analyzes the instability of modern life which now finds expression in the excesses of intercollegiate athletics. "Nothing is more difficult for our civilization," he says, "than to impose a limit on anything. Its impetus carries it too far in everything. It is almost a law of its constitution. . . . This epoch which misuses everything, misuses and will misuse sport. It will make it—it has already begun to make it—one more of the elements of excitement, of competition, and of exhaustion, already alas! only too numerous. No illusions are possible on this score. It might be said that sport is one of the things of which our epoch will probably make the greatest misuse. History justifies us in this fear, for it proves to us that even those civilizations, like the Greek and Roman, which succeeded in limiting themselves in everything else, misused games."

Intercollegiate athletics will brook no rival. All other student activities must subordinate themselves to this ruling passion. The idea that it does not matter much about what an activity is, if it is not athletic, seems to have found expression on the door of one of the offices of the administration building of the University of Michigan. The sign reads simply, "Non-Athletic Committee." Again and again, the greatest opportunities the country affords for enlightenment in the fine arts, in music, in literature, in politics and in religion have been brushed aside by students bent upon attending a rally or a game. One of the most difficult and most important of the problems before our country today is that of quickening intellectual enthusiasm among those who resort to our so-

[1] "Ancient Rome and Modern America," Guglielmo Ferrero, Putnam, p. 340.

called higher institutions of learning. One of the chief difficulties is the present all-absorbing devotion to intercollegiate games.

Efforts have been numerous of late to prove that intercollegiate athletics do not seriously interfere with scholarship by comparing the grades of men who play on the teams with the grades of other students. Such comparisons are of little use. So far as they show anything concerning the effect of intercollegiate athletics upon the intellectual life of the college, they tend to show that those who sit on the grandstands suffer as much as those who struggle on the fields. Anyone who, from the conversation of students or from their own publications, has sought a measure of their common interests knows that the scholarship of the entire institution, not merely of the athletes, suffers from the public passion for winning games. Scores of professors in many colleges have told me that it is all but useless to try to arouse any enthusiasm for study during the football season, yet this is the very time of the college year when, without intercollegiate athletics, we might reasonably expect the greatest intellectual activity. Even the women's colleges do not escape the interference of the "big" football games.

So far have we gone in our willingness to sacrifice studies for big games that the faculty of one great state university announces this fall that any student who wants to attend the "big" game may have a week's vacation for the purpose. This is the logical outcome of the present system. If the college work of a given week is of no great importance to a few chosen athletes, it is presumably of no great importance to other students. If scholarship standards are to be lowered for experts in athletics, they may as well be lowered for everybody else. And that is what happens in scores of colleges, tho few college professors venture to brave the unpopularity that comes from saying so. The question is not whether the standards of one college are lower than those of another, or whether the standards of intercollegiate athletes are lower than those of other students, or whether the standards of a given college are lower than formerly. The question is whether the standards of college education for the whole country are not lower than they would be without the interference of our grandstand system of athletics.

Portland, Oregon

IF I HAD MY LIFE TO LIVE OVER

BY MARION HARLAND

AUTHOR OF "WHERE GHOSTS WALK," "MARION HARLAND'S COOK BOOK," "THE DISTRACTIONS OF MARTHA"

COULD I begin anew the study of the awful problem we call Human Life, and bring to the task experience gained by failures innumerable and grievous, what would be my schedule for a "working plan?"

There does not live a rational creature who has passed the noon-mark and is nearing the evening twilight, who has not put the question to himself a hundred times, often with groanings that cannot be uttered.

Could I forget errors and the disasters entailed by them, or recall these as danger-signals, what should I set myself humbly and hopefully to learn and to practise? The answer was not formulated in my mind until I had passed my fortieth year. My confidence in the wisdom of the hypothesis then accepted by reason has never wavered. Even the partial adaptation of it to my daily living has encouraged me to tabulate it in response to the question set down at the head of this article.

If I could—as I have longed in vain all my life to do!—"rub out and begin again," I would bend every energy of mind and will to the business of *living one day at a time.*

Believing, as I do, devoutly, that the Father inspires His children as truly today as when the world was new, I reckoned as a direct message to my spirit that in the "quiet hour" of an early morning in that All-so-Long-Ago, a single line upon the page of my open Bible flashed up at me as if I had never read it until then: *"Give us this day our daily Bread."*

Why the repetition of the diurnal feature of one clause of the matchless compend of mortal want and aspiration? Why not "Give us our daily bread" Or—"Give us this day our bread?" Assured from the first that the wording was neither tautological nor meaningless, I followed to a definite conclusion the clue put into my hand:

All of Time present and to come that I have a right to call my own is Just One Day.

In the mere utterance the phrase is trite to absurdity. In essence it condenses into one celestial drop the wisdom of the eternities.

If, since that moment of enlightenment, I have faced life and duty more courageously than ever before, I ascribe it to the lesson set for me then in those seven words. If I could go back to the beginning of my conscious existence as a rational immortal being, I would obey, literally and prayerfully, the injunctions—"Work while the day lasts," and "Be not anxious for the morrow!" If it be true—and in the light of the inspired Word who can doubt it?—that

Like mist from glass,
God wipes the stains of Life's old battle fields
From every morning that He brings to pass—

all of my yesterdays are "back-numbers" with which I have nothing to do. Except as they have helped mold character and thought, they are practically as if they had not been. I should take up the New Day, the Father's latest gift to me, with clean hands and a trustful heart. He who boasted, "I have all the time there is!" exprest what I should know and feel. "'Here and Now' comprize it all!" I should say exultingly, and address myself at once to the task of getting all that I can—God helping me—out of the rich, beautiful Unique committed to me.

From the beginning of Time until now there has never been another just like it, and there will never be an exact copy of it. Every hour should flower into Opportunity, and each duty should be performed with vigor and zeal, not hampered by depressing memories or disheartening forebodings. Action and Energy would be synonyms. There would be no need of conserving forces against a day of possible demand upon them; no borrowing trouble at usurious interest. An eminent divine of the last century, in preaching from the text, "As your days, so shall your strength be," likened the day's burden to a stick of wood.

"The Master's word is pledged for strength to carry each day's stick," he declared. "We read nowhere that he engages to give grace for faggots. If you will persist in adding yesterday's or tomorrow's burden to the load, you must bear it yourself."

In that new life of mine I should allot to every "stick" the time and care honestly due to it, apportioning aright the relative importance of each. There would be no crowding or hustling.

Have we ever considered calmly how much of life's stir and fret and friction is consequent upon the desire to get decks cleared for what the morrow will bring to do or to bear? Pythagoras enjoins upon his disciples the duty of reviewing at night what they have done or failed to do during the day. I suspect that he meant that one day and suggested no balance-sheet of dead-and-gone yesterdays. He was a humane philosopher and too wise an economist to jumble old accounts with new or to forecast the probable expenditures of the next day or week.

Notable housewives tell us that they save not a little by paying cash for daily purchases because there is no risk of being charged for what they have not bought, or of blunders on the part of bookkeepers which make them pay twice over for the same item. My second trial of life would be conducted upon a strictly cash basis thruout. One thing at a time, and that well done, and the next hour swept clean for its share of care, labor, responsibility and enjoyment would be a fixed rule. Of enjoyment there would be a royal allotment for every one of the twenty-four hours.

Longfellow "was in the Spirit" when he thrust from him the haunting "Tomorrow":

> The invisible guest
> Who whispers, "Remember Barmecide,
> And tremble to be happy with the rest!"
> And I make answer, "I am satisfied!
> I know not, ask not what is best,
> GOD hath already said what shall betide!"

This is not fatalism, but the sublimity of faith. Volumes of homiletics could not establish the eternal verity more firmly. It is a divine Q. E. D. No sane man would presume to meddle with God's decree.

In my second pupilage I should acquire this lore quickly and well. Commencement-Day would follow fast upon matriculation. That—with all the weight of evidence at hand which I have briefly indicated here—I have not assimilated the truth in my present existence, betokens crass stupidity. Seers in all ages have proclaimed it, whether men would hear or whether they would forbear. A score of years before the illumination of which I have spoken was vouchsafed to me, I stored away in my memory a morsel of leaven which should have leavened the whole lump:

"God gives some blessings to us in groups, like the purple clusters of the vine. Of the Elixir of Life He grants but one drop at a time, taking away one before bestowing another. No man ever had more than one minute he could justly claim as his very own. The centenarian has never owned two days at once."

Were the Great Lesson mastered and reduced to practise, I cannot see why I should not remain forever young. "Without haste, without rest," because never harried by bodings of what the next day might bring forth to tax my nervous forces, the diurnal tale of toil and pleasure would involve no wear and tear of physical and mental energies.

And when the evening of my one Day and of a Life made up of such days—each "round and perfect as a star"—drew near, I should "both lay me down and sleep," to awake in the dawn of the first Tomorrow I had ever known.

New York City

FEDERATION

BY PERCY MACKAYE

Read by the author before the American Academy and National Institute of Arts and Letters, Boston, November 19, 1915.

Over there—they know the singeing and blinding of sorrow.
Over there they know the young dead: they know the dear
Touch of the living that shall be the dead tomorrow:
Here—what know we here?

Over there they feel the heart-rage, the sick hating
Of bitter blood-lust: the imminent storm of steel,
Burden and pang of a terror never-abating:
Here—what do we feel?

There, where they snuff the reek of a burning censer
Borne by the stark-mad emperors—their pain,
Tinged with a hallowed pride, takes on the intenser
Soul of a world insane.

We, who still spared to reason, here where the thunder
And surge of the madness dwindle to murmurs and cease,
We who, apart, stand dazed by the demons of plunder—
How shall we conjure Peace?

Peace—did we call her, the gluttonous mother who suckled
Her monster child, till it waxed to this Minotaur?
Peace—did we crown her, the secret harlot who truckled
To breed from the loins of War?

One word—one only—will be ours in awaking:
Nevermore! Nevermore let us build for merely our own.
Peace is not ours alone for the making or breaking,
Peace is the world's alone.

For the battle-gage is feud-lust or federation.
The ultimate beast is enthroned, and man is its thrall;
And beast or man shall survive as nation with nation
Fights—not for one, but all.

A dream?—yes, the dream that once was a planet's derision
Now blazons a planet's prayer: the cry to be free
Of a world unconceived in wo of a Dante's vision,
Or Christ's on the blasted tree.

For our deeds are the henchmen of dreams. Since only by another
Dream can the dreamer be vanquished, let ours create
The beautiful order of brother united with brother:
Victorious dreaming is fate—

America—dreamer of dreams! Be destiny's leader,
Militant first for mankind, for so your own soul.
Blended of all, for all shall be interceder
And guide to the world's goal.

LITTLE TRAVELS

SOME MID-WINTER VACATION TOURS, WIDELY VARYING IN TIME AND EXPENSE, ARRANGED BY BERTHA RUFFNER. THEY SUGGEST SEVEN OF THE PLEASANTEST WAYS TO ESCAPE THE CHILL, GREY NORTHERN CLIMATE. WHETHER YOU CHOOSE TO SAIL TO SOUTH AMERICA AND SPEND A MONTH OR MORE TRAVELING THRU THE CITIES WHERE MODERN SKYSCRAPERS JOSTLE THE QUAINT OLD SPANISH BUILDINGS, TO WANDER LEISURELY AMONG THE SUNNY GARDENS OF SOUTHERN CALIFORNIA, OR MERELY TO RUN DOWN TO PINEHURST FOR A WEEK OF GOLF, YOU WILL FIND HERE A CAREFULLY PLANNED ITINERARY, WITH ALL THE NECESSARY DETAILS OF ROUTE AND PRICE.

SOUTH AMERICA
JAMAICA AND CUBA
THE BAHAMAS AND FLORIDA
CALIFORNIA
THE MIDDLE SOUTH
ASHEVILLE, RICHMOND, WASHINGTON AND ATLANTIC CITY
GRAND CANYON AND SAN DIEGO

THE BAHAMAS AND FLORIDA

Time—Three to Four Weeks

First Day. Leave *NEW YORK* Thursday at noon by steamer.

Fourth Day. Arrive *NASSAU*—Sunday. Hotels from $2.50 up, American plan. The Bahamas (British Islands) are historically interesting as the landing place of Columbus in the new world. The climate is equable and many days can be spent in sailing about the islands with their unbroken forests and miles of wonderful shore. In Nassau—fishing, golf, tennis, polo are among the many amusements. The surf bathing is perfect and time must be given to this sport. Also visit the Sea Gardens. Large glass-bottomed boats go there each afternoon. The gorgeously colored fish, the marine plants, sponges and coral form pictures well worth the visit.

Sixth Day. Leave *NASSAU* in the evening by steamer.

Seventh Day. Arrive *MIAMI* in the morning. Hotels from $2 a day up, American plan. A wide awake town and one of the most popular on the coast. Its 300 miles of smooth hard boulevard, its perfect winter climate and such attractions as golf, tennis, fishing and boating make the days pass pleasantly and all too quickly. The chief pastime is fishing and one can take his choice of variety and size, as it is simply a matter of location. Take time to drive to Cocoanut Grove over an excellent road bordered by beautiful homes with fine grounds. Also take some of the boat trips to the beaches and up the Miami River to the Everglades.

Eighth Day. Leave *MIAMI* in the afternoon. Arrive *PALM BEACH* in about three hours. Hotels $2.50 to $6 a day up, American plan. This is unquestionably the most famous of the winter resorts of the state. Its location between the Ocean and the Lake and its wealth of tropical plants, trees and shrubs give it a charm found nowhere else. Prominent members of American and European society have been entertained here. Golf, tennis, boating and fishing all may be enjoyed here. Motorboat racing events take place frequently during the winter. On the ocean side is a fine beach for surf bathing. The automobile, bicycle and roller chair paths thru the jungle afford pleasant trips.

Tenth Day. Leave *PALM BEACH* in the morning. Arrive *ROCKLEDGE* about noon. Hotels from $2.50 a day up. American plan. One of the first resorts established in the state. It derives its name from the rock-bound shores of the Indian River, on which it is located. The place is surrounded by beautiful orange groves, the fishing is excellent and the water life very popular. There is a golf course and there are tennis courts and fine scenic drives. Excursions may be taken to Merritt Island and Banana River.

Twelfth Day. Leave *ROCKLEDGE* in the early afternoon. Arrive *DAYTONA* in about three hours. Hotels from $1.50 to $5 a day up, American plan. Situated on the Halifax River, this town, built in a forest of oaks, palmettos and magnolias, is one of the prettiest spots in Florida. At Daytona are boating on the river, hunting many miles of beautiful drives and a bustling attractive town. Seabreeze, located on the ocean beach across the river from Daytona. Many of its hotels are directly on the famous Ormond-Daytona Beach. Here one may indulge in sea bathing, golf, fishing and duck hunting. The motorist will find good roads running to many nearby resorts.

Fourteenth Day. Leave *DAYTONA* in the afternoon. Arrive *ORMOND* in about fifteen minutes. Hotels $3 to $5 a day up, American plan. Boarding houses $2-$3 a day, American plan. Ormond Village is on the west bank of the Halifax River, while the resort is across the bridge running back to the ocean. It is one of the most picturesque spots in the state and its hotels have a home-like atmosphere, greater, probably, than anywhere else. Fine drives, automobile and bicycle trails are found here. Golf is one of the leading attractions. The trip up the beautiful winding Tomoka River must not be omitted. Sailing and fishing, as well as tennis, may be indulged in.

Sixteenth Day. Leave *ORMOND* in the late afternoon. Arrive *ST. AUGUSTINE* in about two hours and a half. This ancient city, the oldest in the United States, has a wealth of historic interest. The narrow streets, old buildings, the Slave Market, the old gates and many other points will keep you busy for several days. There are two golf courses.

Nineteenth Day. Leave *ST. AUGUSTINE* at noon.

Twentieth Day. Arrive *NEW YORK* next evening. If desired, another week may be spent in a trip thru the central portion of the state, leaving Jacksonville by steamer down the St. John's River to Palatka and then taking the daylight trip thru the Oklawaha River to Silver Springs. "A Romantic Trip thru a Semi-tropical Fairyland." From there one may go on to St. Petersburg, Tampa and back by rail to Jacksonville, stopping en route at Florence Villa in the midst of orange groves and beautiful lakes; Deland, the University town, and Magnolia Springs on the banks of the St. John's River. Hotels at all points from $3 a day up. American plan. Cost of this side trip is about $20.

Fare from New York back to New York (steamer to Nassau and Miami and all rail from there to New York) $92.20

Fare from New York back to New York (steamer to Nassau and Miami, rail to Jacksonville and steamer to New York) $90.95

JAMAICA AND CUBA

Time—One Month

First Day. Leave *NEW YORK* any Wednesday by steamer.

Fifth Day. Arrive *KINGSTON* Monday. Hotels $2.50 to $5 a day up, American plan. This is an attractive city and is the capital of the Island. The streets are broad and white, with large shade trees. Four or five days spent here will afford time to visit the various points of interest, among them Constant Spring, Hope Gardens, Spanish Town, the British Barracks at New Castle and Castle Gardens. The roads are excellent, running in every direction.

Ninth Day. Leave *KINGSTON* in the morning. Arrive *PORT ANTONIO* in the evening. Hotels $2.50 to $5 a day up, American plan. This interesting city has two harbors, for it is located on a high point of land extending into the Bay and dividing it. A restful spot where days may be spent taking beautiful drives over wonderful roads. Do not fail to take the "Rafting Trip" down the Rio Grande for ten miles on a raft made of bamboo. You may indulge in golf, tennis, in boating and fishing.

Thirteenth Day. Leave *PORT ANTONIO* in the evening by steamer.

Fourteenth Day. Arrive *SANTIAGO* (Cuba) in the morning. Hotels $1.50 a day up, European plan. Santiago, called "Dreamy city of the Indies," is built on a range of hills. Spend a couple of days here driving to the various points of interest, many of them recalling the Spanish war. Old Spanish houses gaily colored abound, also old churches. The magnificent mountains which surround the city, as well as the harbor, which is truly hidden from sight, are within easy reach of the city.

Seventeenth Day. Leave *SANTIAGO* in the morning.

Eighteenth Day. Arrive *HAVANA* the next morning. Hotels $2 up, European plan, $5 up, American plan. Full of historic interest and charm, this city is one of the most fascinating in America. It is a bit of the old world brought into the new. The streets are narrow, the shops delightful and the old churches and public buildings most interesting. Visit the cemeteries because they differ from those in the United States. Go by trolley to Marianao, Camp Columbia and other various suburbs. Between the hours of five and six drive thru the Prado and out along the Malecon (sea wall), with picturesque Morro Castle opposite. Three times a week the famous Municipal Band gives concerts there. Spend one day in Matanzas driving about the city and also while there visit the celebrated Caves of Bellamar. Leave the city Monday, Wednesday or Friday evening for a trip to the Isle of Pines. Its unequaled climate, its fine automobile roads, magnificent scenery and wonderful bathing beaches attract many travelers. Cost of side trip good for ten days from Havana back to Havana is $12.

Twenty-seventh Day. Leave *HAVANA* about noon by steamer.

Thirtieth Day. Arrive *NEW YORK* in the afternoon.

Fare from New York back to New York (steamer to Kingston, rail to Port Antonio, steamer to Santiago, rail to Havana, steamer to New York) $108

THE MIDDLE SOUTH

Time—Two to Three Weeks

First Day. Leave *NEW YORK* at noon by steamer.

Third Day. Arrive *CHARLESTON* third morning. Hotels from $1.50 day up, European plan, to $3 a day up, American plan. A very old, historic and interesting city. Among the attractions are—Magnolia

Cemetery, Isle of Palms with its fine beaches and the famous Magnolia Gardens. You will want to wander about the city and visit the old churches, the Powder Magazine, the Slave Market, the old Charleston Market, the hall of which is now used as a Confederate Museum. Visit also the world-famed East Battery Promenade, where you will get a view of the harbor with Forts Sumter and Moultrie standing guard.

Sixth Day. Leave *CHARLESTON* in the morning, and in about an hour.

Arrive *SUMMERVILLE.* Hotels $3 to $5 per day and up, American plan. Boarding houses $1.50 per day up, American plan. This is one of the popular resorts of this section owing to its location in the longleaf pine region. The climate is mild, for it is the one place in the United States where tea is raised. It is an old fashioned, lazy, charming town, delightfully unprogressive. Spend the day in taking some of the delightful drives to the points of interest. Visit the tea gardens or play golf or tennis. If your taste runs to hunting you will find here a fine hunting preserve, containing 1800 acres well stocked with deer, quail and other game.

Eighth Day. Leave *SUMMERVILLE* in the morning.

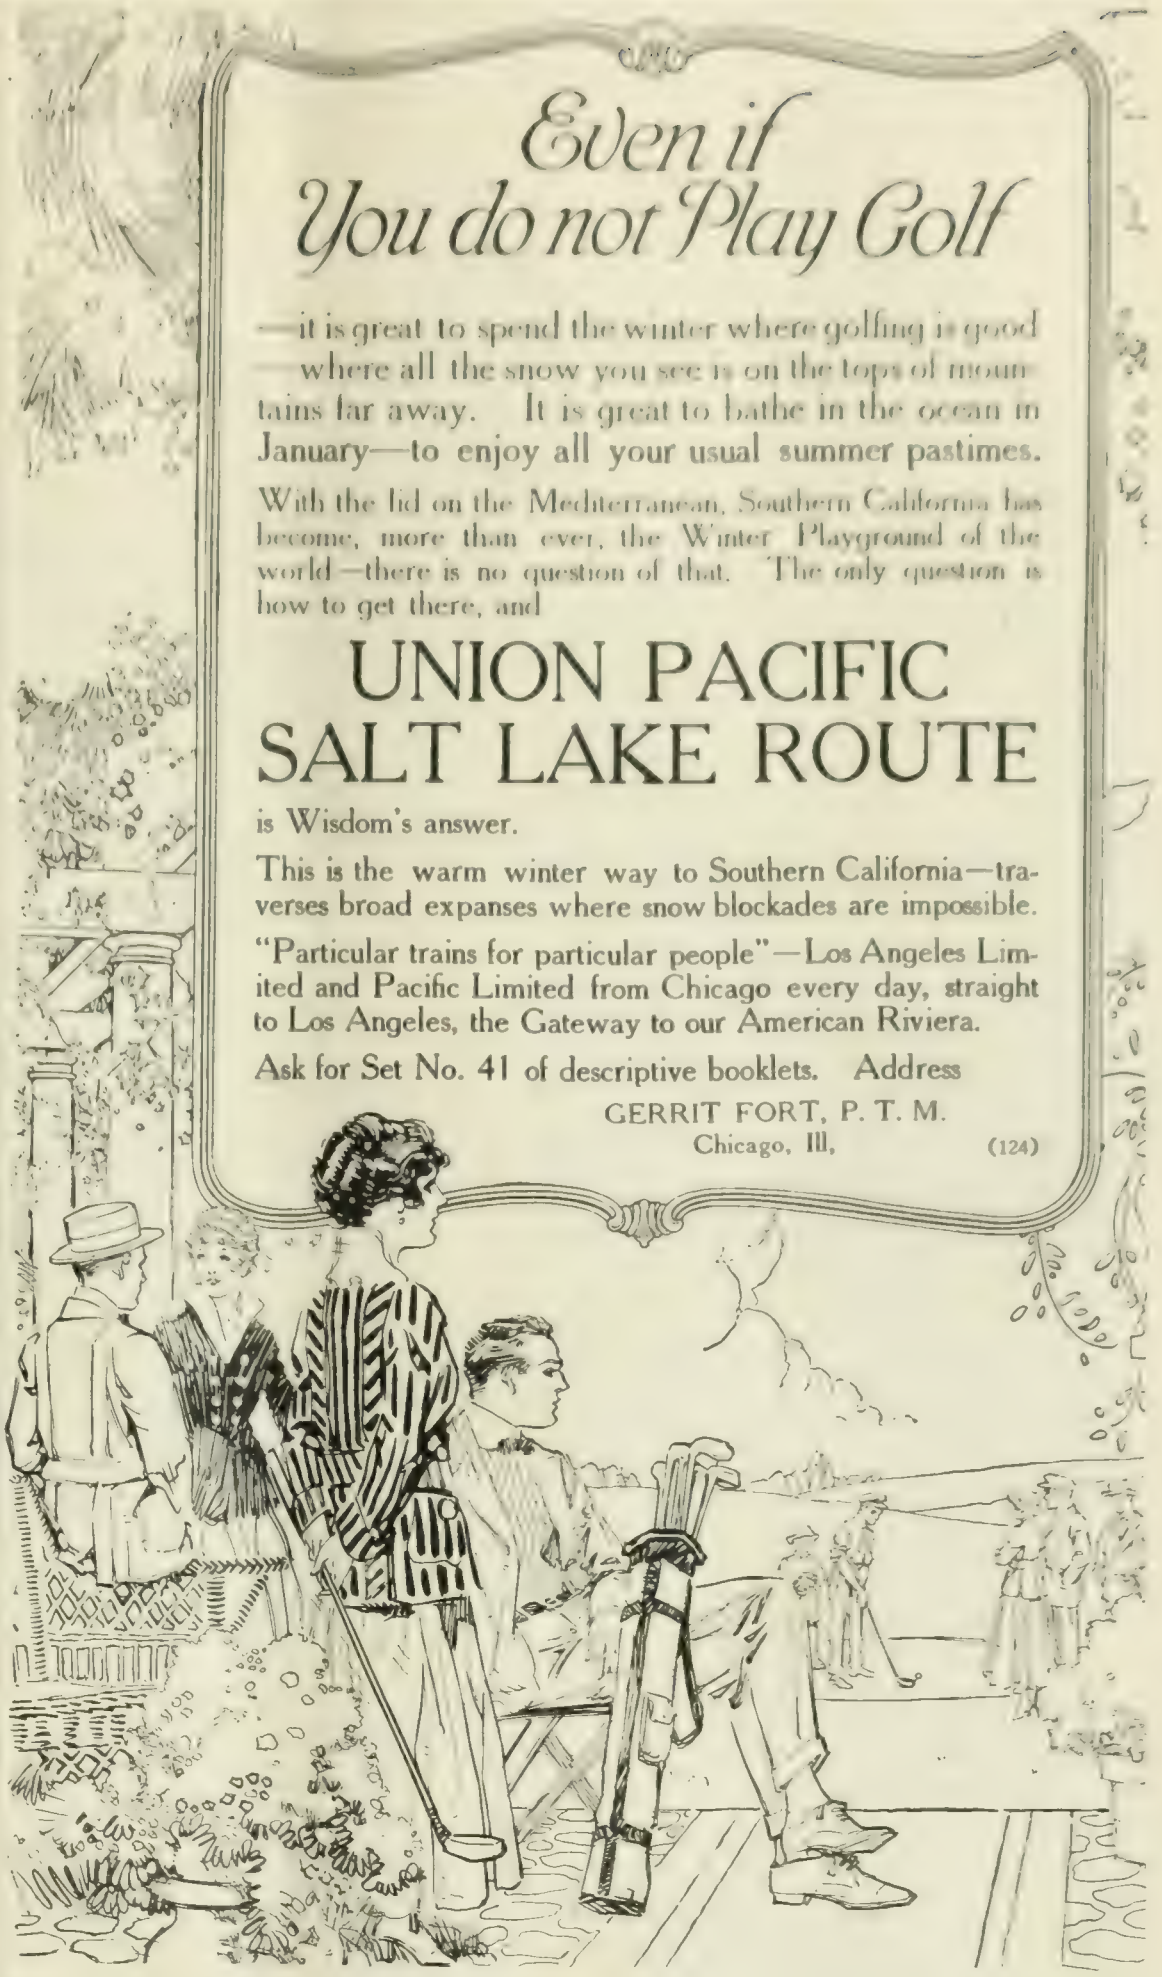
Arrive *AUGUSTA* in the early afternoon. Hotels $2.50 to $5 a day up, American plan. This city was settled in 1735, and like all Southern towns has much of historic interest for the traveler. The climate is dry and bracing and Summerville Heights is famous as a winter resort. The lover of golf will find here two eighteen hole courses among the finest in the South. Horseback riding is popular here as well as hunting. Take one day for a trip to Aiken, eighteen miles away, reached by trolley. It is a quaint town with wide streets. Its groves of tall pines add to its charm.

Tenth Day. Leave *AUGUSTA* about noon.

Arrive *COLUMBIA* in about three hours for connection.

Leave *COLUMBIA* an hour later.

Arrive *CAMDEN* in one hour. Hotels $4 a day up, American plan. Boarding houses $2 a day up, American plan. An ideal resort because of its wonderful climate. The air is dry, soft and balmy. Time here can be well spent in visiting the many places of historical interest. The roads which run through miles of pine forests afford fine riding or driving. There are good tennis courts and splendid golf links and the hunting is good.



Twelfth Day. Leave *CAMDEN* in the morning. Arrive *PINEHURST* in three hours. Hotels $2.50 to $5 a day up, American plan. An interesting colony consisting of four hotels and about fifty cottages located in the longleaf pine belt, which makes climatic conditions perfect. It is one of the leading health and pleasure resorts of the Middle South. Golf is the chief attraction. Tennis, too, is popular and many tournaments are held. Hunting and driving are among the amusements.

Fourteenth Day. Leave *PINEHURST* in the morning. Arrive *OLD POINT COMFORT* in the evening. Hotels $2.50 to $5 a day, American plan. The many attractions here make time pass all too quickly. Fortress Monroe, the great shipyards at Newport News, Hampton Institute and the Soldiers' Home at Hampton are all worth a visit. At the large hotel you will find a bathing establishment where you may have some of the famous European cures.

Sixteenth Day. Leave *OLD POINT COMFORT* in the afternoon for Norfolk. Leave *NORFOLK* in the evening by steamer. Arrive *NEW YORK* the next day in the afternoon. Or, leave *OLD POINT COMFORT* in the evening by rail. Arrive *NEW YORK* the next morning.

Fare from New York back to New York, all rail..... $44.09

Fare from New York back to New York, returning by steamer.....$43.85

Even if You do not Play Golf

—it is great to spend the winter where golfing is good — where all the snow you see is on the tops of mountains far away. It is great to bathe in the ocean in January—to enjoy all your usual summer pastimes.

With the lid on the Mediterranean, Southern California has become, more than ever, the Winter Playground of the world—there is no question of that. The only question is how to get there, and

UNION PACIFIC SALT LAKE ROUTE

is Wisdom's answer.

This is the warm winter way to Southern California—traverses broad expanses where snow blockades are impossible.

"Particular trains for particular people"—Los Angeles Limited and Pacific Limited from Chicago every day, straight to Los Angeles, the Gateway to our American Riviera.

NEW YORK TO ASHEVILLE

Returning via Richmond, Washington and Atlantic City.

Time Two Weeks

First Day. Leave *NEW YORK* in the afternoon.

Second Day. Arrive *ASHEVILLE* the next afternoon. Hotels from $2 to $6 per day. American plan. An all-the-year resort situated on a commanding site surrounded by mountains. It has an elevation of over two thousand feet, which insures a dry and bracing atmosphere. Miles of good hard, smooth roads make motoring a delight. Golf, tennis, may be had as well as hunting. The principal drives are to the summit of Sunset Mountain and over the magnificent Vanderbilt estate.

Fifth Day. Leave *ASHEVILLE* in the evening.

Sixth Day. Arrive *RICHMOND* the next morning. Hotels $1 and up, European plan. A couple of days can be well spent here, for the city is full of historic interest. Homes of noted people, interesting monuments can all be seen in driving about the city. Hollywood Cemetery contains the graves of a number of well known men.

Eighth Day. Leave *RICHMOND* in the morning. Arrive *WASHINGTON* at noon. Hotels from $1.50 a day up, European plan. If time is limited, take one of the automobile tours to the principal public buildings in the city. They have personally conducted tours with a competent guide, and ample time is given to visit the buildings and see all that is interesting and instructive. Visit Mt. Vernon, going either via steamer or trolley. The National Cemetery at Arlington, the quaint old town of Alexandria, Ft. Myers, all are interesting.

Tenth Day. Leave *WASHINGTON* in the morning. Arrive *PHILADELPHIA* at noon. Spend just a couple of hours here (waiting for connection); this will give you time to visit Independence Hall, which every American is interested in seeing.

Leave *PHILADELPHIA* in the afternoon. Arrive *ATLANTIC CITY* in one hour and a half. Hotels from $2.50 a day up. American plan. This is one of the most interesting cities in America as well as one of the greatest health and pleasure resorts. Its miles of magnificent hotels fronting on the ocean and its boardwalk extending for eight miles along the ocean give it a distinction unequaled among American watering places. The ocean piers, of which there are six, contribute to the pleasure of the tourists by their concerts and other forms of amusements.

Fourteenth Day. Leave *ATLANTIC CITY* in the afternoon. Arrive *NEW YORK* in about three hours.

Fare from New York back to New York $18.82

SOUTH AMERICA

Time About Three Months.

First Day. Leave *NEW YORK* at noon by steamer (Wednesday). "United Fruit Line."

Fifth Day. Arrive *KINGSTON* in the morning. Several hours are spent here, giving you time to visit the city, public buildings and attractive shops. Leave Kingston in the afternoon by steamer.

Seventh Day. Arrive *COLON* second day. Hotels $2 to $3 a day, American plan. A typical Central American city with an ideal climate. A couple of days may be spent here very pleasantly. Visit the Columbus Monument, the Arches of Tolon, the hospital with its fine grounds, and the beach with its magnificent sand and large swimming pool.

Ninth Day. Leave *COLON* in the morning. Arrive *PANAMA* in two hours. Hotels from $2 to $3 a day, American plan. "This is the most interesting city on the Isthmus. It has a cosmopolitan population and visitors going back from southern Quaint houses, narrow streets and old ruins mingled with homes of modern con-

struction and well paved streets. Three days spent here will pass quickly, there are many delightful drives to be taken, among them to Old Panama over the slope of Ancon Hill, which will give you a fine view of the route of the Canal, and to Ancon Hospital on Ancon Hill, with its extended views and beautiful grounds. Do not omit the cathedrals and old churches. Walk along the old sea wall and fortress. Visit the market place, the Chinese shops and the Panama hat stores.

Twelfth Day. Leave *PANAMA* Monday by steamer.

Fifteenth Day. Arrive *PAITA* the third day. A stop of a few hours is made here. It is the first port in South America where opportunity is given to land. Shore boats take passengers who wish to visit the town; charge is 40 cents per passenger. It is one of the most northerly ports in Peru and third in importance. Here are manufactured the Panama hats. Vendors visit the ship, hats being their chief commodity. The Piura Railway runs from here four times a week inland to its terminus, Piura, the first town established in the country by the Spaniards. Fairly good accommodations may be had if you desire to spend any time here.

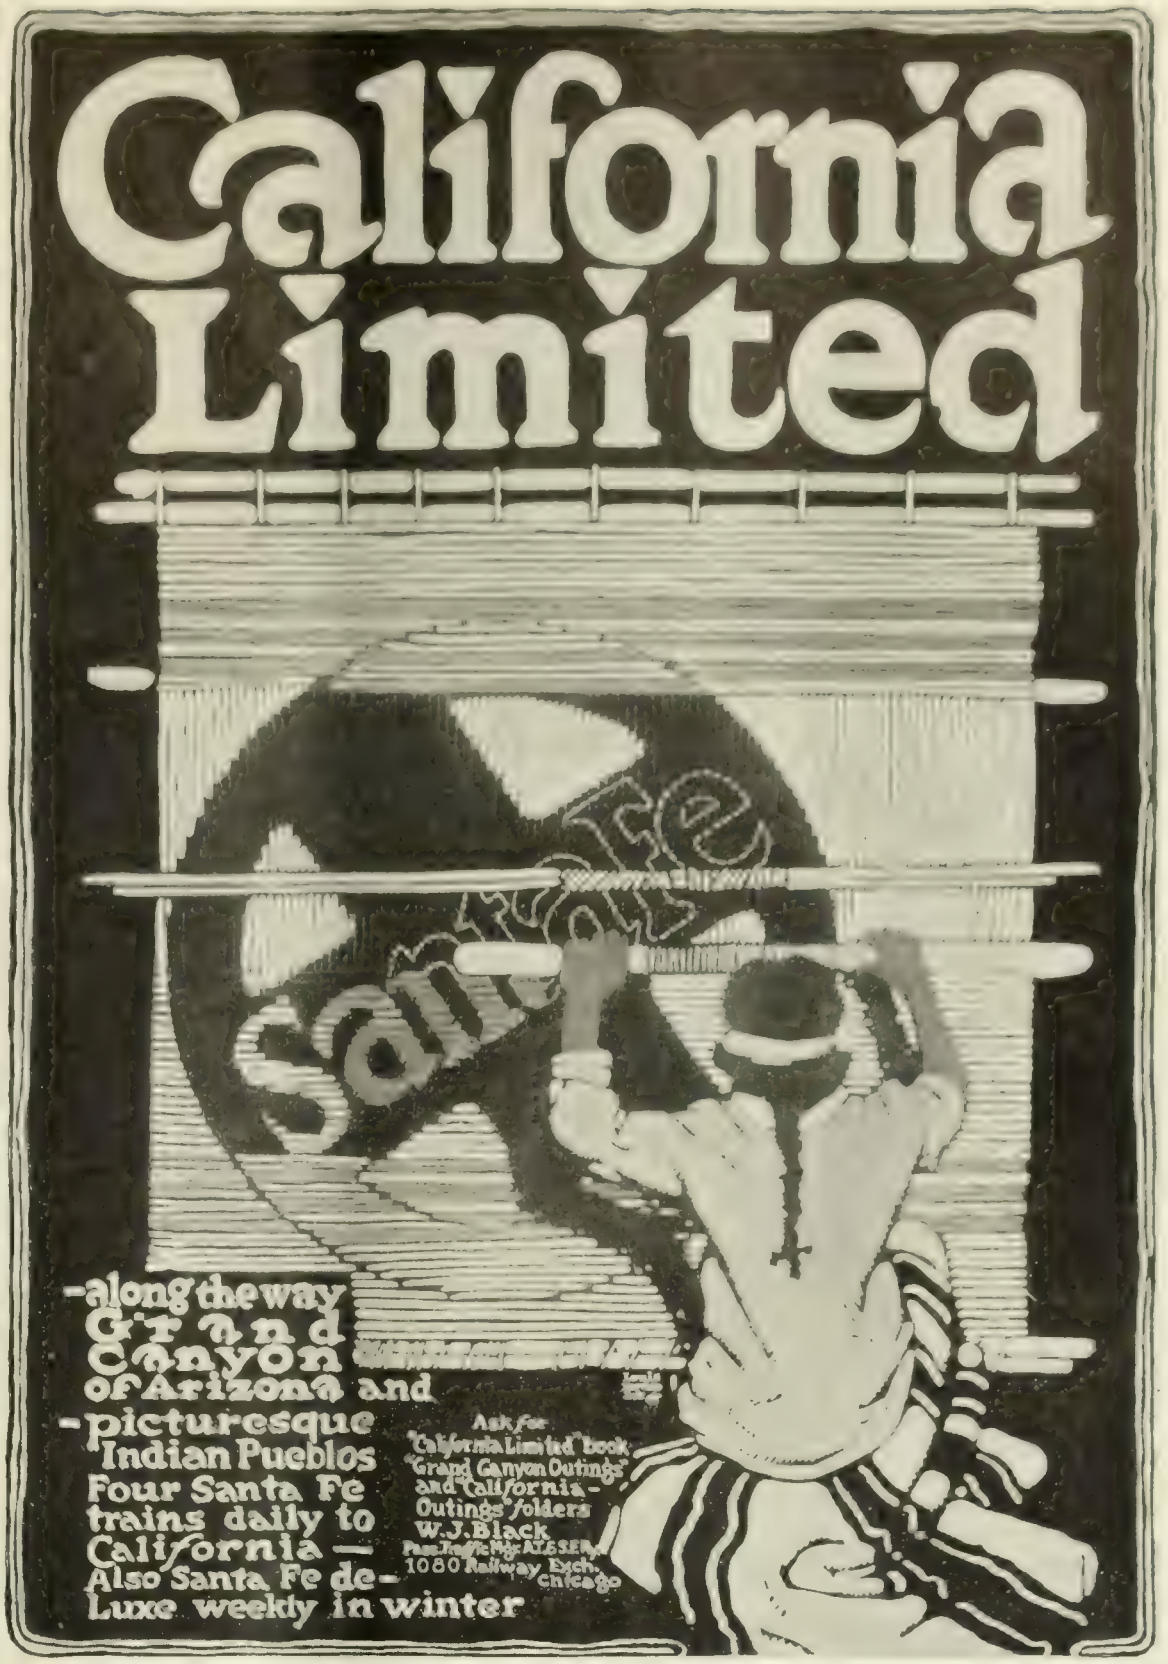
Sixteenth Day. A short stop is made at Eten and Pacasmayo, where time is given for a visit on shore (shore boats are in waiting), if desired. This district is devoted chiefly to the cultivation of rice.

Seventeenth Day. A short stop is made at Salaverry, the port of Trujillo. Nearby are the ruins of the Inca town Chanchan, which are worth a visit.

Eighteenth Day. Arrive *CALLAO*, Peru. A few hours may be well spent in this busy town, the chief port of Peru. Its history dates back to the era of the Spanish Conquest, and you will find here many interesting old buildings. Leave *CALLAO* by electric cars, and in thirty-five minutes

Arrive *LIMA*, Peru. Hotels $4 a day up, American plan. It is an inland city about eight miles from the coast, the capital of Peru, and one of the most attractive cities of South America. It is known by various titles, the most popular being the "City of Kings." It was founded about 400 years ago. It stands 500 feet above sea level and is sheltered by lofty mountains. It has a delightful climate, though no rain falls. Here you may visit the churches and convents, the renowned cathedral founded by Pizarro in 1535, where his remains now rest; the old Hall of Inquisition and the University of San Marcos. Electric cars will take you to the fashionable suburbs. The quaint blend of the old and the new in this city is a constant source of delight. It is famous for its bull fights and gay social life.

Twenty-third Day. Leave *LIMA* and arrive *CALLAO* in thirty-five minutes. Leave *CALLAO* by steamer.



Twenty-sixth Day. Arrive *MOLLENDO* in the morning. A port in southern Peru where a few hours are spent before leaving for the interior.

Leave *MOLLENDO* at noon. Arrive *AREQUIPA*, Peru, in the evening. Hotels Central and Royal, $3 to $5 a day up, American plan. Here we find an attractive city in a sunny climate. It is set in the midst of a valley, which owing to irrigation, is green and fertile, forming a sharp contrast to the arid desert through which the train passes. It stands at the foot of the great mountain El Misti, crowned with snow. Near by is located Harvard Observatory. One day spent here will pass all too quickly, visiting notable churches and buildings and parks as well as the observatory.

Twenty-eighth Day. Leave *AREQUIPA* in the morning. Arrive *JULIACA*, Peru, in the evening. Hotels $3 a day up, American plan. A stop over night is made here.

Twenty-ninth Day. Leave *JULIACA* the next day. Arrive *CUZCO*, Peru. Hotel Central, $3 to $5 a day, American plan.

Thirtieth Day. The old Capitol of the Inca Empire is a city, in itself, full of interest, presenting well preserved land-

2 West 47th St., New York City

marks of three distinct epochs. The Pre-Inca of great antiquity, the Inca of the Eleventh century, and the Colonial of the Spanish conquest in the Sixteenth century. Visit here the "Temple of the Sun" - the great fortress of Sacsahuaman on a hill overlooking the city—the cathedral built on the walls of an Inca royal palace and the convents of San Francisco and Merced.

Thirty-first Day. Leave *CUZCO* in the morning, passing through ever changing scenery and quaintly attired Indians who crowd around the train to sell their wares. Arrive *SICUANI*, Peru, in the evening. Spend the night here.

Thirty-second Day. Leave *SICUANI* in the morning. Arrive *JULIACA* in the afternoon. Hotel Ratti $3 a day up. American plan. This is a night stop only, but as the town is prosperous it will interest.

Thirty-third Day. Leave *JULIACA*, Peru, in the morning by rail. Arrive *PUNO* in a few hours, where steamer is taken to Guaqui, at the southern end of Lake Titicaca, the highest navigated water in the world. You will pass many islands with extensive ruins of Inca origin and view many mountain peaks, some over 20,000 feet high.

Thirty-fourth Day. Arrive *GUAQUI*, Bolivia, in the morning and make connection by rail. Arrive *LA PAZ*, Bolivia, in the afternoon. Gran Hotel Guibert $3 to $5, American plan. This is the most elevated capital city in the world. It lies in a natural basin 1500 feet deep, yet at an elevation of about 12,000 feet. Visit the Plaza, the cathedral, the market. The bright colored garments worn by the Indians make the market especially interesting and the quaint streets with the walls of the houses painted in hues of many colors add to the attraction. Spend an afternoon driving down the valley and visit the Indian town of Tiahuanaco with its extensive ruins.

Thirty-eighth Day. Leave *LA PAZ* in the morning by rail.

Fortieth Day. Arrive *ANTOFAGASTA*, Chile, in the afternoon. Hotel Gran $3 to $5 a day, American plan. This is the port for one of the most important mining districts of South America. Connection is made here for the trip to Valparaiso. Leave *ANTOFAGASTA* by steamer.

Forty-first Day. Arrive *COQUIMBO*, Chile; a short stop is made here and shore boats as at other ports are waiting to take you to shore if you desire (cost from 40 cents to a dollar). This port has a fine harbor and is in the midst of a mining as well as an agricultural district.

Forty-second Day. Arrive *VALPARAISO*, Chile. Hotels $3 to $5 a day, American plan. Several days may be spent profitably at this chief seaport of Chile. It is an old city, the houses are built upon the barren hills, but they have much social life and its suburbs abound in charming villas. The principal point of interest outside the city is Viña del Mar with its fine villas and race track.

Forty-fifth Day. Leave *VALPARAISO* and in about four hours arrive *SANTIAGO*, Chile. Hotels $3 a day up, American plan. This is the Capital of Chile, and is a mixture of Paris and Madrid. Drive to Santa Lucia Hill, which overlooks the city and gives you an excellent view of it; also to Alameda.

Forty-sixth Day. Leave *VALPARAISO* in the evening and after two days travel across the Andes through [illegible] and wonderful scenery.

Fiftieth Day. Arrive *BUENOS AIRES*, Argentina. Hotels $5 a day up, American plan. The Capital of Argentina is the largest Spanish-speaking city in the world and the fourth largest city in the western hemisphere. Although [illegible] it is a "live" up-to-date city, modern in appearance. Here you will find many fine public buildings, well kept parks and drives, charming shops and Obera Teatro Colon with magnificent equipment and fashionably dressed Argentinians

The Carney Investment Co.
505½ Citizens Bank Building, Tampa, Florida

Fifty-third Day. Leave *BUENOS AIRES* in the evening, by steamer.

Fifty-fourth Day. Arrive *MONTEVIDEO*, Uruguay, the next morning. Hotels $3 a day up, American plan. A charming city, the Capital of Uruguay, where you will find handsome plazas, modern buildings and plenty of money.

Fifty-sixth Day. Leave *MONTEVIDEO* by steamer.

Fifty-ninth Day. Arrive *SANTOS*, Brazil, and after a short time leave by train and arrive *SAO PAULO*. Hotel Sportsman $3 up, American plan. Santos, the first port touched in Brazil, is the coffee port of the world. Sao Paulo, "Santos upon the Hill," is built at an elevation of 2000 feet and is the home of the coffee kings who have built palatial residences. Their public buildings are fine and the Museum at Ypiranga is well worth a visit.

Sixty-first Day. Leave *SAO PAULO* by rail, and passing through fine scenery and tropical forests, arrive *RIO JANEIRO* in the evening. Hotels $4 a day up, American plan. This is one of the three cities of the world whose situation places them far ahead of any others in the world. It is on a magnificent bay surrounded by mountains. The drives through the suburbs are a delight. A week spent here will pass all too quickly, there is so much to see and do. After visiting the points of interest in the city you must take a trip to Corcovado, a noted peak overlooking the harbor, giving you a magnificent view. Go by ferry and rail to Petropolis, high up among the mountains, a beautiful and fashionable city where the foreign legations are located.

Sixty-ninth Day. Leave *RIO DE JANEIRO* by steamer.

Seventy-second Day. Arrive *BAHIA*. Only a short stop is made here, but time is given for sightseeing. It is a curiously built city, consisting of an upper and lower town. From the former a fine view can be obtained.

Seventy-ninth day. Call at Port of Spain, Trinidad, one of the prettiest towns in the West Indies.

Eightieth Day. A stop is made at Bridgetown, Barbadoes, an attractive island, the first English colony in the West Indies.

Eighty-sixth Day. Arrive *NEW YORK*.

Fare from New York back to New York ..... about $575.00

(This does not include meals on the United Fruit steamers nor Pullmans and meals on the railroads.)

CALIFORNIA

First Day. Leave *NEW YORK* in the afternoon.

Second Day. Arrive *CHICAGO* the next afternoon. Leave Chicago in the evening.

Sixth Day. Arrive *SAN FRANCISCO* in the evening. Hotels $1.50 a day up, European plan. Sight-seeing cars or autos will take you about the city and give you a good idea of it. Conductors describe the points of interest, which take in the business as well as the residential sections, the Golden Gate Park, the Beach, Cliff House and the Presidio. One day must be given to Mt. Tamalpais and Muir Woods. The former will give you wonderful views of mountain ranges, as well as of the bay and the city. In the Muir Woods you will see many big trees. Spend one day trolleying to Berkeley visiting the University of California and the Greek Theatre there, then going over to Oakland with its attractive parks and suburbs. Take one day for the trip by steamer around the bay, one of the most beautiful in the world.

Tenth Day. Leave *SAN FRANCISCO* in the morning. Arrive *DEL MONTE* in about two hours. Hotel $4 a day up, American plan. Spend the afternoon in wandering about the grounds, which consist of 125 acres in a high state of cultivation. Take the seventeen-mile drive thru the woods and along the ocean, passing many attractive ancient cypress trees.

HURLBUT'S
Story of Jesus
FOR YOUNG AND OLD

A masterpiece! Fresh from the pen of the beloved Rev. Jesse Lyman Hurlbut, D. D., whose "Story of the Bible" is cherished in more than 500,000 homes. Written to fascinate both children and adults — and it does!

Published Just In Time For Christmas Giving

The NEWEST and MOST COMPLETE narrative of Our Saviour's life. A truly inspired book, written with all the lucid description, all the beautiful simplicity which Dr. Hurlbut's long life of reverent study and religious authorship make possible. Every page is an inspiration. Every chapter can be perfectly understood, even by children. A valuable aid to parents, teachers and ministers. It is difficult to conceive of a more appropriate gift for young people.

Illustrated by Wm. Hole, R. S. A., R. E.

Besides the glowing story in written word, this great book contains 200 vivid illustrations. Many are actual photographs. Eighty are full-page drawings by William Hole, R. S. A., R. E., sixteen of which are in colors. All have been carefully selected for uniformity and in themselves graphically tell the Gospel Story.

This wonderful book, with its 500 pages of large, clear type, 200 pictures, handsome cloth binding, embellished cover and chronological and topical index,

Brightening the Lives *of your* Children's Children

WONDERFUL as is its record of triumphs, MAZDA Service strives toward even higher accomplishment in electric lighting.

For the mission of MAZDA Service is to develop not merely a better lamp, but the best illuminant that mankind can devise. For this, a corps of scientific pioneers in our Research Laboratories at Schenectady delves unceasingly into the hidden ways of science—exploring the whole world for new materials, new methods, new thoughts and supplying the results of this search to the makers of MAZDA lamps so that they may bring the perfect light always a little closer.

For this, too, thro' all the years to come, MAZDA Service will go on and on, ever seeking to improve the lamps of tomorrow as it has improved the lamps of yesterday. And thus as the mark MAZDA etched on a lamp means to you the best lamp of today, so to your children's children, MAZDA will mark the lamp that sums up in their day all this endless search for the perfect light.

The Lovable Meddler is good

For a Christmas gift. Everyone is *sure* to like this successful new novel

By LEONA DALRYMPLE

The Lovable Meddler

is a bewitching romance about lively young men and women and a wise and matchmaking old doctor. The "Lovable Meddler" is new. A charming, buoyant, diverting book packed with fun, drollery and charming sentiment.

At All Bookstores, $1.35 Net

Publishers Reilly & Britton Chicago

Eleventh Day. Leave *DEL MONTE* in the morning. Arrive *SANTA BARBARA* in the late afternoon. Hotels $4 a day up. American plan. This charming city has a unique and beautiful setting on the shores of Santa Barbara channel. One of the most interesting points is the Old Mission, one of the best preserved in th estate. The garden is especially fine and the view from the belfry unsurpassed. Walking, riding, driving, boating and bathing, as well as golf and tennis, are all possible here. The drives are among the most beautiful in the state, the roads are fine and the scenery similar to that at Mentone.

Fourteenth Day. Leave *SANTA BARBARA* in the morning. Arrive *LOS ANGELES* in the afternoon. Hotels $1 a day up, European plan. The chief attraction of this city lies in the beautiful flower-covered homes and the loveliness of the surrounding country. The various trolley trips, with competent guides, give one a good idea of this section. One day may be spent in going "Around the Beaches," of which there are quite a number. Cost of this $1. A day must be given to the Old Mission Trip, which takes you inland along the foothills and thru orange groves. Cost $1. Another day must be spent in going to Mt. Lowe, 5000 feet high; the view is marvelous. Cost $2. Still another day you must go to Catalina Island, going by train to San Pedro, the seaport town of Los Angeles, and connecting there for the Island, reached in about two hours. Cost $2.75. Riverside and Redlands should not be ommitted, the cost is $3.

PASADENA, the city of beautiful streets and homes. Hotels from $3 a day up. American plan; boarding houses $1.50 a day up. American plan. Many prefer this as a stopping place and all points of interest may be visited from here as well as Los Angeles, seven miles distant, with frequent trolley service.

Seventeenth Day. Leave *LOS ANGELES* or *PASADENA* about noon. (Los Angeles Limited.)

NOTE: The trip may be taken in the opposite direction, leaving Chicago by this train over the Salt Lake Route.

Twentieth Day. Arrive *CHICAGO* in the morning. Leave Chicago in the afternoon.

Twenty-first Day. Arrive *NEW YORK* next day.

Cost of ticket, New York back to New York	$1[illegible].30
Cost of Pullman, $18 in each direction	$ 36.00
Cost of ticket, Chicago back to Chicago	$1[illegible].50
Cost of Pullman, $13 in each direction	$26.00

GRAND CANYON AND SAN DIEGO

First Day. Leave *NEW YORK* in the morning.

Second Day. Arrive *CHICAGO* in the afternoon. Leave Chicago in the evening.

Fifth Day. Arrive *GRAND CANYON* in the afternoon. Hotel El Tovar $4 a day up. American plan. Bright Angel Cottages $1 a day up, European plan. This stupendous chasm with a depth of 6000 feet and a width of thirteen miles, must be seen; it cannot be described. The huge gash is carved by the Colorado River cutting down thru the earth, leaving towers and turrets, cliffs, ledges and slopes. These various formations in connection with the various colorings of earth, rock and verdure make a picture beyond description. Drive to Hopi Point, two miles, $1.50. Drive to Mohave Point, three miles, $2. Drive to Yavapai and Grandeur Points $1. Take the Hermit Rim Road trip going over a fine boulevard with its fine views of the Canyon, of the forests and the distant mountain peaks. Visit Hopi House, operated by a representative of the dwellings of the Hopi Indians. Here live a small band of Hopis who are weaving, making pottery or hand silver ornaments. In the evening they entertain you with songs and sun dance. One of the regular

trips is to plateau and river on mule-back with guide. Cost $6 for each person and $5 extra for guide for parties of one or more. The start is made at 8 a. m.

Tenth Day. Leave *GRAND CANYON* in the evening.

Fourteenth Day. Arrive *CHICAGO* in the morning. Leave Chicago in the morning.

Fifteenth Day. Arrive *NEW YORK* in the morning.

If longer trip is desired make a side trip to the San Diego Exposition, which is to be kept open during 1916. There the outdoor beauty of Southern California is at its loveliest, a colorful riot of sunshine and flowers. In the buildings of old mission architecture are interesting exhibits of California, past, present and future.

Tenth Day. Leave *GRAND CANYON* in the morning.

Eleventh Day. Arrive *SAN DIEGO* in the afternoon. Hotels $1 a day up. European plan. Arrive *CORONADO BEACH* in the afternoon. Hotel $4 a day up. American plan. Coronado Beach is but a short distance from San Diego and both are accessible to the various points of interest about here. Sight-seeing autos will take you to the Old Mission (seven miles). Sight-seeing autos will take you to Point Loma, the great promontory which shelters the bay on the west. There are fine views all along the route and many things of interest. Sight-seeing autos will take you to Tia Juana, Mexico. Visit LaJolla by train, a quaint and attractive town on the ocean sixteen miles north.

Fourteenth Day. Leave *SAN DIEGO* in the afternoon.

Eighteenth Day. Arrive *CHICAGO* in the morning. Leave Chicago in the morning.

Nineteenth Day. Arrive *NEW YORK* in the morning.

Cost of ticket, New York to Grand Canyon and return $118.00
Cost of Pullman, $17.25 in each direction .....$ 34.50
Cost of ticket, Chicago to Grand Canyon and return .....$ 80.00
Cost of Pullman, $12.25 in each direction .....$ 24.50

Cost of ticket, New York to San Diego via Grand Canyon and return to New York $153.80
Pullman in both directions.....$ 38.50
Cost of ticket, Chicago to San Diego via Grand Canyon and return to Chicago $117.00
Pullman in both directions.....$ 28.50

CRUMBS SWEPT UP

The Pennsylvania Manufacturers' Association announces that, when the child labor law goes into effect next January, 20,000 children under sixteen years of age will be dismissed since, under the new law, they cannot be employed profitably.

After many years of experiment and the loss of much money, tobacco farmers in the Connecticut Valley have succeeded in profitably raising shade grown tobacco. Most of this is used as wrappers for five-cent cigars. It sells for from $1.50 to $2 a pound, whereas the duty alone on imported wrapper leaf is $1.85 a pound.

Fiske Warren, the philanthropist, is devoting much time to Halidon, the single-tax colony near Westbrook, Maine, of which he is the principal mover. There are four other communities of this character in the United States, and Mr. Warren expects to see many more established when their advantages are more widely understood.

Recruiting posters in England are numerous and striking. One of them shows the black silhouettes of soldiers climbing a hill with bayonets at the ready. "Don't stand looking at this," says the inscription, "but go out and help them." One poster—clearly unofficial—was chalked on a glass "Blimey, when *Are* you going?"

A Kindly Help for Failing Strength

TOMORROW and tomorrow . . . the tide of years sets in and the autumn of life has come. Energy has become enfeebled, the blood thins, resistance is shaken and the digestive processes weaken—weary days give way to sleepless nights.

Then will Sanatogen help! Not to replace the common articles of diet, but to make them give maximum nutriment. Not as a substitute for medical treatment, or to give temporary stimulation, but to aid the nervous system in its direct control over the digestive processes, to enrich the blood, and to promote restful slumber.

For Sanatogen is the natural way. It is a chemical union of purest albumen of milk and an organic phosphorus preparation, thus supplying in most easily digestive form the best upbuilding elements and giving the starved cells organic phosphorus, that most vital food, "in such a form," as Dr. Saleeby says, "that the nervous system can actually take hold of it."

John Burroughs, venerable naturalist and author—78 years young—has written:

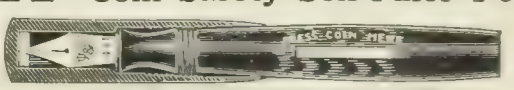
"I think Sanatogen did me much good—it gave me strength, steadied my nerves and greatly improved my sleep. It comes the nearest to being a remedy for old age that I have yet struck."

And as over 21,000 physicians have themselves written in praise of what they have seen Sanatogen do in daily practice, you may indeed be sure that the reputation of Sanatogen is founded on truth and tangible results.

Sanatogen is sold by good druggists everywhere, in sizes from $1.00 up.

Grand Prize, International Congress of of Medicine. London, 1913

SANATOGEN
ENDORSED BY OVER 21,000 PHYSICIANS



Send for "The Art of Living," a charming little book by Richard Le Gallienne the popular poet-author, touching on Sanatogen's kindly help and giving other interesting aids in the quest for contentment and better health. This book is free. Tear this off as a reminder to write THE BAUER CHEMICAL CO., 26-R Irving Place, New York.

THE NEW BOOKS

THE FIVE TOWNS TRILOGY

We have waited long for the final volume of Arnold Bennett's great trilogy. We have at times feared that Mr. Bennett had forgotten Edwin and Hilda in his eagerness to gather in the golden harvest that his plays were bringing him. But now, perhaps because London theaters are darkened, he has returned to the couple whom he had brought together and tells the story of their married life in *These Twain*.

In these days of quickly crowding books, five years is a long time to keep up an interest in any fictional characters, and it would not have been surprizing if we had ceased to be curious as to whether "they lived happily ever after." But if we had forgotten them, and even if we had not re-read *Clayhanger* and *Hilda Lessways* in the meantime—tho we must confess we have—we should open the new volume and plunge immediately into the thick of the Five Towns without having to wonder of all the people we were to meet therein, "Now who on earth is he? or she?" No, we know our way about in the Five Towns better than in our birthplace, so much more real than reality is fiction in the hand of a master.

Mr. Darton, in his handy little volume on *Arnold Bennett*, gives us a map of the Five Towns, but it will hardly be needed by the Bennett-lover, for he has long ago mapped it in his mind and will not now substitute the actual names for those used by Bennett in the twelve volumes which he has written about the people of this unromantic region. The reader, who has thru the kindness of Mr. Bennett become intimately acquainted with a large part of the population of the Five Towns, is only mildly interested to learn that those who live there call them Tunstall, Burslem, Hanley, Stoke-upon-Trent, and Longton, instead of "Turnhill," "Bursley," "Hanbridge," "Knype," and "Longshaw"; that Newcastle street is the local name for what we know as "Old Castle street," Waterloo road for "Trafalgar road," and Black Bull station for "Red Cow"; and that Clayhanger's new house stood at the corner of Elm road, Cobridge, instead of "Oak road, Bleakridge," as Bennett told us. The fact is, Bennett's people live everywhere else as much as in Staffordshire, and that is why we are interested in them.

In the two earlier volumes of this trilogy, Arnold Bennett has attempted something unprecedented in novel writing, altho Browning did it in *The Ring and the Book*. He has told the same story twice as it appears to two of the participants. In the first we learned what Edwin Clayhanger thought of himself and of the woman he was to marry. In the second we learned what Hilda Lessways thought of herself and of the man she was to marry. Wherein the two were together the incidents and conversation were of course the same in both volumes, but they seemed very different because we were looking thru different eyes. In *These Twain*, which deals with their life together, he has adopted the ordinary expedient, tho with extraordinary skill, of telling how the one and the other felt about things. *Clayhanger* is much more interesting as a novel than *Hilda Lessways*. Mr. Bennett cannot fit himself into Hilda's shoes as he can into Edwin's. *These Twain* is better than the second volume of the trilogy and as a psychological study is comparable in interest to the first, altho it has not the variety and picturesqueness of *Clayhanger*. Tho perhaps the only reason why we think the first is the best is because it is the longest.

But did they "live happily ever after"? Well, they did and they didn't. You see, Bennett isn't writing fairy tales; neither is he writing tragedies. It was just an ordinary marriage. They did not resort to pistols or poison or the divorce courts. He did not beat her nor did she scold. Neither of them fell in love with anybody else. Still it cannot be denied that they occasionally got on each other's nerves.

Edwin and Hilda fly together and fly apart like electrified pithballs. Their married life is a rapid alternation of intimacy and estrangement. The feeling of perfect comprehension and unity changes suddenly to a feeling of alienity and antagonism. Each of them suffers the shock of Nora of "The Doll's House" when she discovers that she has been living for years with a stranger. The discordance of temperaments and the conflict of wills threatens repeatedly to drive them apart, but their love always draws them together again. And thru it all we can watch that gradual growth of mutual dependence, toleration and respect by which in spite of themselves these twain become one flesh.

These Twain by Arnold Bennett. Doran. $1.35. *Arnold Bennett*, by F. L. Harvey Darton. Holden. 50 cents.

MOSTLY FOR BOYS

The Child's Book of American Biography, by Mary S. Stimpson. An excellent collection of very brief, simply but entertainingly written sketches of thirty historic Americans.

Boston: Little, Brown. $1.

How to Make and How to Mend, by an amateur mechanic, will delight a boy and prove practical to his elders with its clear, short directions for making, mending, and cleaning articles of common use.

Macmillan. $1.

William Penn, by R. S. Holland, and *Benjamin Franklin*, by E. L. Dudley, are the late issues of *True Stories of Great Americans*, a fine series of short biographies attractively written for young folks.

Macmillan. 50 cents.

Letters From Brother Bill, Vărsity Sub, by W. K. Towers. Practical advice on the theory and practise of modern football in the form of letters from an elder brother at college to a younger in prep school.

Crowell. 50 cents.

Indian Why Stories, by Frank B. Linderman, are tales told to the author by a chief of the Blackfeet Indians and retold by him. They are nature stories, quaint legends in which animals are personified and myths.

Scribner. $1.

Dave Porter at Bear Camp, by Edward Stratemeyer. The eleventh volume of regulation Stratemeyer goods concerning the varied and exciting experiences of the usual wide-awake American lad of juvenile fiction.

Lothrop, Lee & Shepard. $1.25.

The Adventures of Mollie Waddy and Toob, by Paul Waitt. A diverting story of three elephants which come from the private park of an Indian prince to a public park in America, where they meet many friends. The book is for quite little people.

Platt & Peck. Boards. 75 cents.

Mother West Wind "Why" Stories, by Thornton W. Burgess. These delightful bedtime tales of "conversational animals" with many imitations most of which utterly lack the charm and spirit of these tales that tell why Peter Rabbit wears gold buttons and why Spotty Turtle carries his house with him.

Little, Brown. $1.

Mark Tidd in Business, by C. E. Kelland. A sixteen-year-old boy takes charge of a motion picture theater in the hospital he was treated so many successful sales schemes that he makes a success out of virtual bankruptcy. Interesting but such big paragons in real life would be miracles, not boys.

Harper. $1.

THE SCIENCE OF GOVERNMENT

In the history of thought and culture there are few things more interesting than the views of political philosophers, for the state has ever been the greatest of social mechanisms. In *Readings in Political Philosophy*, Francis W. Coker gives copious extracts from the works of the great writers on politics from Plato to Bentham. Each author is preceded by an introductory sketch of his life and work and the selections which follow are well chosen. Problems which interested the political philosophers of the past may be grouped as: What is the origin of the state? Which is the best form of government? How may a state protect itself from revolution or aggression? Of these, only the last has any interest for us now and it is still. Aristotle who has the widest interest. Revolution, according to him, are caused by envy of the lower classes; therefore let honors be distributed equitably; above all the middle classes must be strengthened, as they are the bulwark of the state.

In a highly suggestive little volume, *The Natural History of the State*, Professor Ford has developed the state

idea in the light of natural history. It is refreshing to come across another explanation for the origin of the state besides those familiar ones, the military and the economic, altho most of this book goes to an explanation and criticism of the Darwinian theories of evolution and only the last few chapters to the biology of the state.

Briefly, the theory is that the origin of the state goes back even to prehuman or animal communities, develops into the tribe based on blood and finally into the cohesive group called the nation. The strong nationalism of today is therefore a reassertion of the blood basis of the state. Unchecked absolutism is the very soul of the state. It dictates manners, morals and laws; grants privileges and liberties; the individual is merely its creature with no right of independent existence. Merely to state these theories is to invite volleys of criticism. But it should be remembered that here we are given only a brief outline of this view.

Thomas H. Reed, in *Government for the People*, a series of popular essays on political reform, discusses with great sprightliness the initiative, referendum and recall, the short ballot, court reform, education, etc. Mr. Reed's volume is too brief and scrappy to be an informing restatement of the progressive movement.

The first part of Professor Dealey's new volume, *Growth of American State Constitutions*, is devoted to an historical review of these from 1776 down to 1914. He finds a marked tendency in the recently adopted constitutions to include much which had hitherto been regarded as belonging properly to statute law. This has made them long and detailed instead of short and general. Undoubtedly the tendency of the courts to interpret general principles conservatively has led constitution makers to insert clauses granting specific powers to the legislatures, particularly in matters of social legislation.

The new movement in politics is more towards efficiency than to radical reform. Professor Dealey vigorously advocates the reorganization of our loose-jointed irresponsible government along efficient, responsible lines thru the short ballot, administrative centralization and the gubernatorial budget. He is also inclined to favor a unicameral legislature on the ground that the two-house system multiplies labor and expense, promotes deadlocks and encourages log-rolling; moreover, it is a survival of aristocracy with the upper class in the upper house. Hasty action on the part of a one-chamber legislature would have a sufficient check in the governor's veto.

The author concedes the inevitability of woman suffrage, but fears that it may result in an increase of the "stay-at-home" vote. Suffrage is not so much a right as a privilege, and should be dependent on the fulfilment of certain tests, such as the ability to read and write English, personal registration and the payment of a registration fee,

Doran Books for the Holidays

NOTABLE FICTION

THESE TWAIN — *Arnold Bennett*
Not merely as the long-awaited completion of the Clayhanger trilogy but as the most [illegible] of modern literature extant, as *the most important book* of the year whether from a purely literary or a "human" standpoint, THESE TWAIN is being as widely studied, as eagerly discussed as "Clayhanger" or "Tono-Bungay." It is one of the few novels which can [illegible]. Color jacket, net $1.50. The Clayhanger Trilogy, three volumes in full leather, boxed, Net $5.00

THE GOLDEN SCARECROW — *Hugh Walpole*
"The very soul of the book is a fantasy entirely its own. Beautiful, tender and [illegible] wonderful comprehension of the world of childhood, and written with a method that the author has developed and simplified and polished until he has made it a well-nigh perfect means of expression."—*New York Times*. Net $1.25

LOT & COMPANY — *Will Levington Comfort*
Though Mr. Comfort's adventurer hero has, in the color of foreign lands and the thrill of swift action, all the popularity of "Routledge Rides Alone," he also has an interesting quest. So life's meaning is sought against the dusty routine of "Lot & Company's" office which gives the book a more satisfying significance than the famous "Routledge." Color jacket. Net $1.25

OF HUMAN BONDAGE — *W. Somerset Maugham*
A book to brood upon, to re-read, for its brilliant visioning of the stupid people of this world, the dull educators, and the growth of a sensitive soul. Net $1.50

SPRAGGE'S CANYON — *Horace Annesley Vachell*
A story of California—where for years he was a ranchman—by the distinguished author of QUINNEYS,' etc. Color jacket. Net $1.25

NOBODY — *Louis Joseph Vance*
A delightfully light and deftly graceful comedy of society, melodrama, and romantic love. Illustrated, color jacket. Net $1.25

THE STORY OF JACOB STAHL — *J. D. Beresford*
Next to Clayhanger, the greatest trilogy—three books, "The Early History of Jacob Stahl," "A Candidate for Truth," "The Invisible Event." Each separately, Net $1.35. The three in set, boxed, Net $2.50

GENERAL BOOKS TO REMEMBER

THE WORLD'S HIGHWAY — *Norman Angell*
An American pacifist document equally free from vague sentimentalism, inexact prejudice, and impractical suggestions. Net $1.50

KINGS, QUEENS AND PAWNS — *Mary Roberts Rinehart*
A woman's first-hand view of the war, for men and especially for women who desire to know the feminine reaction to the conflict. Net $1.50

VAGRANT MEMORIES — *William Winter*
The one man who connects the age of Longfellow and Holmes with to-day gives his most mellow recollections of greatness past. Illustrated. Net $3.00

THEISM *and* HUMANISM — *The Rt. Hon. Arthur James Balfour*
A philosophical adventure of the first rank. Net $1.75

DEMOCRACY *and* THE NATIONS — *Dr. James A. Macdonald*
Seals the friendship of Canada and the United States. Net $1.35

OVER THERE — *Arnold Bennett*
Scenes of War on the Western Front. Drawings by Walter Hale. Net $1.25

SOME HOLIDAY BOOKS

Heart of Europe

By Ralph Adams Cram

"The book is glowing lava. It is the product of an artist, a poet, an enthusiast, whose heart is broken by the vandalism of war. . . . No one can read his chapters without a thrill of delight in his fine descriptions, his vivid enthusiasm, his enlightening explanations."—*Boston Transcript.*

Beautifully illustrated. $2.50.

Beautiful Gardens in America

By Louise Shelton

This sumptuous volume contains beautiful pictures of a great variety of those gardens in this country which may be taken as representative of the possibilities of gardening under our diverse climatic conditions, accompanied by a brief but truly illuminative text.

No more ideal Christmas Gift for the garden-lover could be found.

Profusely illustrated in color and black and white. $5.00 net.

Constantinople Old and New

By H. G. Dwight

"The work has been a labor of love—Constantinople is the author's birthplace. He knows it as home, and the touch of affection appears on every page. Life high and low, the hut and the palace, the marts, the water-front, the retired nooks float gently within our ken under the author's guidance, and the story of the 'glory of the East' unfolds gently, informingly, seductively, but effectively. One can almost say, after reading the book, I know Constantinople. . . . Few books of the kind will prove more satisfying to the mind that would inhale Eastern aroma or the eye that delights in knowing things as they are."—*Literary Digest.*

Profusely illustrated. In box, $5.00 net.

which would automatically disfranchise undesirable citizens. Suffrage would then cease to be "deemed an inherent right, automatically going to each adult citizen as he attained his majority, but rather a right earned by showing an intelligent interest in civic life, yet liable to be forfeited by neglect."

Readings in Political Philosophy, by Francis W. Coker. The Macmillan Co. $2.25. *The National History of the State*, by Henry Jones Ford. Princeton University Press. $1. *Government for the People*, by Thomas H. Reed B. W. Huebsch. $1.50. *Growth of American State Constitution*, by J. Q. Dealey. Ginn & Co. $1.40.

OUR NEGLECTED HERITAGE

The fact that Prof. L. H. Bailey is our greatest authority in practical agriculture makes *The Holy Earth*, this essay expressing his ideal, his philosophy of life, of striking interest and value. His plea for simpler, more honest, more thoughtful living is born of no intellectual theory, but is the natural, the unavoidable result of dealing daily with the forces of nature. He is no impractical dreamer of a return to more primitive conditions. Scientific farming will make fewer farmers necessary for feeding the world. But he looks forward confidently to the time when no human being shall be deprived of intimate touch with his Mother Earth, without which complete, sane, glad life may not long endure. Waste, disfiguration, indifference to the beautiful world, these he shows us for what they are—sacrilege.

The Holy Earth, by L. H. Bailey. Scribner. $1.

FRANCE TRANSFORMED

Before the war Anatole France was pouring witty scorn on patriotism and war. Now he publishes, for the benefit of the fund for wounded soldiers, a handsome volume of patriotic letters and essays entitled *Sur la voie glorieuse*.

Paris: Champion 3 fr. 50

PLEASANT ESSAYS ON UNPLEASANT PEOPLE

Affirmations, in the reprint of the collected works of Havelock Ellis, contains studies of Nietzsche, Zola, Casanova and Huysmans, which have not lost their interest in spite of the attention given to these authors in the twenty years since the essays were written.

Houghton Mifflin $1.35

THE CARE OF THE SCHOOL LIBRARY

An excellent manual entitled *Lessons in the Use of the School Library* has been prepared by the Department of Public Instruction of Wisconsin at Madison. The advice on the selection and use of printed tools in the classroom will interest those teachers who have adopted this new method of education.

Madison, Wis.: Dept. of Public Instruction

A BRIEF HISTORY OF EDUCATION

Professor Frank Pierrepont Graves has published a *Student's History of Education* into which he has condensed the essential facts of his larger work in three volumes and the practical results of many years of teaching. Not altogether a recommendation. It is a clear and sufficient presentation for the use of normal school and college classes.

Macmillan $1.25

LITERARY SOCIETY

With French literature the salon had a close and natural connection. For instance the Julies and Juliet Lettres are relating [illegible] French. What influence it had either on English visitors to Paris or drawing [illegible] the English [illegible] is described [illegible] Mrs. Montagu and Mr

dame d'Arblay is made the most of in the detailed study of English writers on their evenings out by Chauncey Brewster Tinker.

Macmillan. $2.25.

THE GOD OF THE ROMANS

Prof. W. Warde Fowler has published his Oxford Lectures on *Roman Ideas of Deity in the Last Century Before the Christian Era*. Altho the sources do not yield a great amount of data, the author, with his well known thoroness examines every scrap of evidence in the light of the general laws and developments of religious notions. The book constitutes a valuable addition to the literature on the religion of ancient Rome.

Macmillan. $1.40.

"BE PREPARED"

The Scout Law in Practice is an elaboration of a series of Boy Scout talks by Arthur E. Cary. He devotes a chapter to each clause of the law, and illustrates his points with examples from life. James E. West, Chief Scout Executive of America, recommends his interpretation to Scout leaders and others interested in the development of boys' character.

Boston: Little, Brown. 60 cents.

FROM FOUNDER TO FIRE

"The Wellesley of serious purpose, consecrated to noble ideals of Christian scholarship" has found in Florence Converse a chronicler who recounts the history of her Alma Mater with deep admiration of her aims and wide knowledge of her achievements. *The Story of Wellesley* is particularly well illustrated by drawings of the college buildings and campus by Norman Irving Black.

Boston: Little, Brown. $2.

HOW OUR BIBLE COMES TO US

Back of the Bible, in a realm until recent years very shadowy, lies an interesting study of its sources. *The Story of Our Bible*, by Harold B. Hunting, illuminating these backgrounds, is admirably adapted to children and it will endue the book for them with a new and living interest. There are chapters on the King James and other versions, pictures of ancient manuscripts, Babylonian and archaic carvings and writings and good reproductions of classic pictures.

Scribner. $1.50.

THE FRENCH STAGE

Mr. Barrett H. Clark is an indefatigable worker, and to his studies of contemporary British, American, and Continental drama he has now added *Contemporary French Dramatists*. To the essays on the Theatre Libre, Lavedan, LeMaitre, and Donnay, taken from his "Three Modern Plays from the French," have been added critical estimates of Brieux, Hervieu, Rostand, Capus, Bataille, Bernstein, together with a bibliography and list of plays almost indispensable to the student of the theatre.

Stewart & Kidd. $1.50.

THE MODERN WANDERLUST

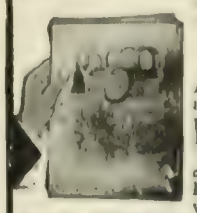
From the author of "Our Mr. Wrenn," more was to be expected than the rather shallow *Trail of the Hawk*, in which Sinclair Lewis concerns himself with the evolution of one of Minnesota's young Norwegians and his wanderlust. Abandoning the quiet humor that made Mr. Wrenn such a delightful acquaintance, Mr. Lewis seeks to portray youth's adventuring spirit, but, still young himself, he fails to recognize the commonplaceness of incidents which the perspectives of age and experience would gage more correctly.

Harper. $1.35.

THE PRESERVATION OF HEALTH

Colon Hygiene, by Dr. J. H. Kellogg, does not deal, as one might infer from the title, with sanitation at Panama but with another canal more important to all of us. In this volume as in that on "Neurasthenia," now appearing in a revised edition, the well-known Battle Creek ideas of diet and exercize are applied to some of the most serious and common ailments. Dr. Kellogg warns against the dangers of fasting, Fletcherizing and other fads of the day.

Battle Creek, Mich.: Good Health Pub. Co.



You Can Earn $250 A MONTH With This NEW MACHINE

Many are doing $3,000 a year and better with this new machine. You can too. You need no experience. We teach you FREE in our simple lesson. Start right at home. Everywhere there's plenty of money and big cash profits waiting for ambitious men.

THIS IS THE BUSINESS FOR YOU

A business all of your own. Requires little capital and grows fast into a real factory—a real manufacturer. Open a Tire Repair Shop with Haywood Equipment. Let the money roll in. Auto tires need mending constantly. There is your profit. Owners eager to give you their business. It means a saving of money to them, and big cash returns for you.

JUST MAIL THE COUPON
For this FREE Book

A valuable guide to power and wealth. It gives the complete details. How to start. How to succeed. Tells all about your opportunity. Shows how easy the work can be done. Shows the big profit in this new field. Write for it today. A postcard will do. Get your FREE copy.

Box 566 Scranton, Pa.

The Best Christmas Gift for a Girl

A book so fascinatingly romantic that wherever you open it, you want to read both ways so beautiful, inside and out, that its possession means constant joy, so delightfully instructive that girls and mothers alike fall in love with it—this is the story Miss Ethel Rogers has written of a camp on Lake Sebago where many girls, living together outdoors, learn the larger lessons of social life as well as to cook, and build shelters, swim, dive, paddle canoes, go on "hikes," and have all sorts of fun, while growing into strong, splendid, capable women with abundant health and energy. This book, "Sebago-Wohelo Camp Fire Girls," is the first and only authorized story of the camp where the great world-sweeping Camp Fire movement started. It is a most fascinating story, but more than a story, for it contains a personal introduction by the founder of Camp Fire telling how the movement started, together with songs, symbols, Camp Fire decorations and more than 50 exquisite illustrations. Price only $1.25 *postage prepaid*. Order today. You take no risk. If not entirely satisfied, return the book at once for prompt refund. Send your order to GOOD HEALTH PUBLISHING CO., 311 W. Main St., Battle Creek, Mich.

THE MARKET PLACE

A REVIEW OF FINANCE AND TRADE

LOANS AND CREDITS

Reports from London say that the two committees recently appointed, one in that city and the other in New York, to make arrangements for a British credit here, have agreed upon a plan for a credit of $150,000,000. Eight London banks are to be the borrowers, upon the security of bonds deposited with the Bank of England. The term of the bankers' bills is to be six months. It is said in New York, however, that the first credit will be for $50,000,000. The money will be expended in this country for supplies.

The first call for payments (15 per cent) from subscribers to the Anglo-French loan yielded $72,000,000. It is understood that all of this has been paid out for war supplies. Under the second call, for 30 per cent, to be paid on the 29th inst., $144,000,000 will be received, and this sum probably will be used at once in the same way.

CONGESTION OF EXPORTS

The Government's complete report concerning our exports in October has not yet been published, but there is some evidence that the excess of exports over imports was even larger than the previous high record shown in February last, $174,682,478. September's excess was $146,343,919, and the average excess for the four months immediately preceding was about $122,000,000. In four weeks of October the shipments from the thirteen ports which do ninety-one per cent of the foreign trade were $308,000,000, against $299,000,000 in February. In the week ending October 23 the amount rose to $98,777,000, which exceeded by $25,000,000 the exports of the preceding week, and those had never been equaled in the past. The part assigned to New York was $67,000,000. For the entire month of October all records at New York were broken, the shipments from that port amounting to $176,387,000. In February, the previous high record month, they were only $113,000,000. Exports in November have been large, but in no week have they equalled those of the third week in October.

Exports would have been even greater, if ships and harbor facilities could have been found for all the freight that came to the seaboard. At New York and other Eastern ports there is an extraordinary and unprecedented congestion of outward bound freight. Piers and freight yards are crowded with loaded cars, and there are long lines of such cars on sidings reaching back into the country. One railroad officer's estimate of the number of cars thus stalled was 50,000. Congestion has been increased by the closing of the Panama Canal, which interrupted shipment of locomotives, cars, guns and ammunition to Russia. Exports of wheat have recently been very large, the weekly average for the last seven weeks having been 11,500,000 bushels. The filling of orders for the Allies has brought to the ports large quantities of auto trucks, explosives and arms. It should not be forgotten that the war has withdrawn from commercial service nearly one-quarter of the world's merchant marine tonnage.

While we are selling large quantities of supplies to the Allies, neutral countries are coming to us for products which, before the war, they were accustomed to buy elsewhere. The official figures for the eight months that ended with August show an increase of thirty per cent in our exports to South America. This change indicates a transfer to the United States of a considerable part of the trade formerly controlled by England and Germany.

OUR GREAT CROPS

Corn is always our largest crop, and the Government's recent report shows that this year's yield is 3,090,509,000 bushels, a quantity exceeding last year's crop by 417,000,000 bushels, and greater by 350,000,000 than the average for the five years immediately preceding. Favorable conditions in October added 64,000,000 bushels to last month's official estimate. This great crop is worth $190,000,000 more than any one of its predecessors, and is valued at nearly two billions, or $1,913,025,071. Only once has the yield been surpassed, and then, in 1912, by a few million bushels.

Credit for part of the great quantity must be given to the South, where, owing to the depression of last year's cotton market, eleven cotton-growing states increased their corn acreage by 35 per cent.

In this report our people are told again that we have harvested more than a billion bushels (1,002,029,000) of wheat, or almost one-quarter of the world's output. This is a record crop that surpasses by 111,000,000 last year's great yield, itself a high record then for wheat harvests. The average for five years ending with 1913 was only 686,000,000 bushels. Our two enormous yields have come to a war market that has made a demand for our unprecedented surpluses and given good prices to our wheat-growers. In recent weeks our exports of wheat have been very large, but Canada—also having a large surplus and, quite naturally, enjoying the favor of Great Britain and France—competes with us in foreign sales. Much of Canada's wheat goes out from our ports. Our wheat-growers and those of Canada will probably control the foreign field (Russia's surplus being locked up) until the middle of January, when the Argentine and Australian crops will affect the market. Argentina's surplus is about 90,000,000 bushels. Crop failure in Australia last year required the importation of 15,000,000 bushels to supply her needs, but this year a surplus of 75,000,000 bushels is expected.

The value of our principal farm crops this year is about $5,500,000,000. Several of them, in addition to wheat, show new high records. In this list are oats, barley, rye, hay, and rice. Last week's report shows that the yield of oats was 1,517,478,000 bushels, against 1,141,000,000 in 1914, and a five years' average of only 1,139,000,000. Barley's increase over last year's crop was 21 per cent, and hay showed a gain of 15 per cent.

In the hight of the crop-moving season there has been no financial strain. A few years ago this was a season of financial disturbance and anxiety. Crops are larger now, but no difficulties are seen. The improvement and relief are due mainly to our new national banking system.

STEEL AND COPPER

There is still great pressure upon manufacturers in the steel industry. A strong demand from abroad has been accompanied by offers of considerable premiums for the filling of orders. But the output of a majority of the mills is sold for four or five months to come. It is understood that several orders were rejected last week. So completely has the supply of steel been engaged that the requirements for a beginning of work on the two battleships for which bids were opened a few days ago cannot be satisfied, it is said, until next summer. This causes complaint at Washington, where some propose that Congress shall be asked for legislation that will afford relief. Prices continue to rise.

After remaining for a long time in the neighborhood of 18 cents a pound, the price of copper is advancing. Week before last it rose to 18½, and at the end of last week it was 19½. This change has been caused by a revival of demand from Europe. It has stimulated trading in copper company shares on the Stock Exchange, where considerable gains were shown in the early days of last week. These gains were reduced in the later days, however, and the net changes were fractional. The plans of companies associated with or controlled by the Guggenheim Exploration Company excited some interest. It appears that the latter company's holdings of Utah Copper Company stock are to be sold to the Kennecott Company, whose mines are in Alaska, and that the Kennecott Company is to acquire control of the Braden Company, whose mines are in Chili.

The Chautauqua Idea

Chautauqua Circles exercize considerable ingenuity to make their current events studies effective. The favorite device is a roll call to which each member responds with his selection of the most important event in "The Story of the Week." He must be prepared to defend his selection with reasons. Another method is to assign kinds of events—political, religious, literary, educational, international, etc.—to particular members to keep track of month by month, three to five minute summaries being called for at each meeting of the circle.

"Acres of Diamonds," the lecture which has been delivered more times than any other on the Lyceum and Chautauqua platform, by Russell H. Conwell, has just been published in book form. 5124 times was the record when the book went to press. It is estimated that this single lecture has earned more than $4,000,000 in the fifty-odd years of its delivery. Ralph Parlette's "University of Hard Knocks," delivered over 2000 times, is also out in book form. Edmund Vance Cooke's poems, the basis of nearly 6000 Lyceum and Chautauqua recitals, have appeared in several volumes.

Edward J. Ward, head of the Community Center work at the Wisconsin State University for five years, and the Social Service School at Chautauqua this year, has been appointed to a newly created position in the United States Bureau of Education. His term begins in January, and national scope is thus afforded for his promotion and direction of the idea of use of the schoolhouse for free discussion, as a polling place, and as a democratic social center for the people.

The United States Bureau of Education announces a National Rural Teachers' Reading Circle plan. The recommended books may be obtained from publishers or secured from libraries or otherwise. The list is classified under five heads as Non-professional Books of Cultural Value, Educational Classics, General Principles and Methods of Education, Rural Education, and Rural Life Problems. The work is intended as a two-year reading course, altho it may be completed by the industrious teacher in shorter time. To those who give satisfactory evidence of having read intelligently not less than five books from the general culture list and three books from each of the other four lists—seventeen books in all—within the two years of the time of registering, will be awarded a national Rural Teacher's Reading Circle Certificate.

Anglo-French Gold Bonds

Yielding an Income of Nearly 5½% On Your Investment

Security These bonds are the joint and several obligation of the governments of the United Kingdom of Great Britain and Ireland and the Republic of France. The ultimate security is the whole taxing power of the British and French governments and the financial morality of the British and French peoples.

Income Over one half of the issue of $500,000,000 was withdrawn for investment by members of the purchasing group. The balance is offered at 98 and interest, yielding an income of nearly 5⅓%. British Consols and French Rentes have usually sold in normal times at prices to yield only 2½% to 3½%.

Conversion Privilege In addition to the income of nearly 5⅓%, each bond carries with it a special privilege entitling the holder, if he does not desire to have his bond redeemed at par, to exchange it at or before maturity—which is five years from date—for a 4½% bond of the two governments, which will run until 1940, but redeemable at the option of the governments on and after October 15, 1930. Based on the yield of British Consols and French Rentes in past years, such a bond would have sold below 110 in only three years of the eighty years prior to the beginning of the present war and would have sold during this period as high as 126.

Convenience The bonds are issued in convenient denominations of **$100, $500,** and **$1000,** and in coupon and registered form, offering equal opportunity and return to all classes of investors. To offer a convenient market for their subsequent purchase or sale, they will be listed on the New York Stock Exchange. Their value, as a basis for loans, is already well established among the banks of the country.

Interest Payable October 15 and April 15

TEACHERS OF CURRENT EVENTS

We quote here a letter just received from the Head of History of a large Southern High School.

"I had my best lesson in Current Events today using The Independent and can assure you that the results, even without having my plans fully materialized and without my special assignments, were extremely gratifying. I had each class read an article, have a very interesting and helpful discussion each week having the text with me to refer to."

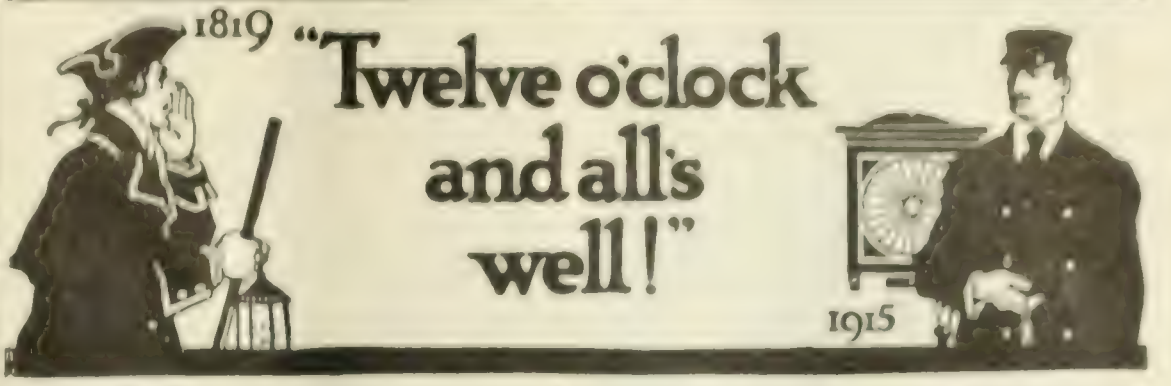
Insurance

Conducted by

W. E. UNDERWOOD

To a Number of Inquirers.—There are only four United States life insurance companies represented in Europe, the Mutual Life, the Equitable Life, the New York Life and the Germania Life, all of New York City. None of them have been materially affected by losses incurred as the result of the war.

From the beginning of the war to August 31, 1915, the Mutual Life's war losses, including those incurred in the *Lusitania* disaster, aggregated $392,804, on 113 lives, under 136 policies. During the same period the company's total death losses were in excess of $26,000,000. The company has never written any business in Russia and it ceased accepting new business in Germany twenty years ago.



The Equitable has written no new business in Germany and Austria for nearly twenty years, and reports that its losses in the countries involved in the war are below normal this year.

From July 31, 1914, to August 31, 1915, the total death losses of the New York Life, due to the war, were $1,422,536, of which $105,145 were on *Lusitania* passengers. The total death losses of the company in the same period of time were $31,356,850. Only twenty per cent of the New York Life's policyholders thruout the world are outside of the United States, the average age of the foreign members being forty-seven years—beyond that of the active fighters. In Russia, Serbia and Japan its policies do not cover the war hazard. In Britain its active business ceased ten years ago and the war risk is slight on account of the age of the policyholders. In Germany, France, Belgium and Austria-Hungary the policies issued prior to 1899 virtually eliminated the war risk. The policies in force in those countries, issued since that time, number about 15,000 on persons whose ages are between seventeen and thirty-nine. These represent about 1¼ per cent of the company's total membership. The company estimates there are 2600 policies on 2400 persons, aged between seventeen and thirty, which contain no provision limiting the war risk. This is about one-quarter of one per cent of the total membership.

The Germania Life, carrying a comparatively large sum at risk in Germany and Austria-Hungary, on August 1, 1915, reported total death claims from the beginning of the war of $167,167. In this connection it noted the reduction of that total to $145,450 thru the accumulation under those policies of $24,717 of reserve and adds: "Up to the end of the year 1914 the company had accumulated from dividends and extra premiums an extra fund of $211,186, from which it appears that a substantial sum is still left from said fund toward payment of future claims of that kind."

We must conclude from the foregoing that the deaths incurred by the American companies to the dates mentioned, as the result of the war, have not affected their general mortality experience unfavorably.

L. D. T., South Glastonbury, Conn.—Report of the Insurance Department of your state indicates that no live stock companies are authorized to do business there. I suggest that you write to Hon. Burton Mansfield, Insurance Commissioner, Hartford, telling him what you want and requesting information and advice. There are a number of such companies in the West, but I think most of them are very small coöperative affairs.

In the year 1819 the directors of the Hartford Fire Insurance Company "voted $20 for the town watch," whose duty it was "to patrol the streets with staff and lantern and guard against incipient fires." From that day to this the Hartford has been in the foretront of every intelligent, constructive movement for fire prevention. It has played an important part in the introduction and development of every modern method of fire prevention and control, from the early attempts at fireproof construction to the latest automatic sprinkler system. Thus the same spirit of public service that voted the first $20 for the Hartford town watch of 1819 still characterizes the

INSURANCE SERVICE OF THE TWO HARTFORDS

For 105 years the Hartford Fire Insurance Company has been noted not only for unquestioned financial strength and integrity, but also for its hearty co-operation in every sanely progressive movement in American insurance.

The Hartford Accident & Indemnity Company conducts an up-to-date casualty and bonding business along the same sound and liberal lines, and it has justly inherited the parent company's reputation for the prompt settlement of every honest obligation.

The two companies between them write practically every form of insurance but life insurance.

Check on the coupon below any form of insurance in which you may be interested. Mail it to us and we will send you full information.

ATLANTIC MUTUAL INSURANCE CO.

ATLANTIC BUILDING, 51 WALL STREET, NEW YORK

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries.

Chartered by the State of New York in 1842, was preceded by a stock company of the same name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of	$27,964,578,109.00
Received premiums thereon to the extent of	287,324,899.99
Paid losses during that period	143,820,874.99
Issued certificates of profits to dealers	90,801,110.00
Of which there have been redeemed	83,811,450.00
Leaving outstanding at present time	6,989,660.00
Interest paid on certificates amounts to	23,020,223.85
On December 31, 1914, the assets of the company amounted to	14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

A. A. RAVEN, Chairman of the Board.

Right in Your Own Town YOUR Christmas Gift Might HELP

Get YOUR share of Christmas Happiness by helping those who are fighting Tuberculosis in your country and right in your own state or town.

Every effort you make to destroy Tuberculosis, will save life, add to the wealth of the community, and lessen the tax required for the support of institutions aiding tuberculous patients and those dependent upon them. Help stamp out the dread White Plague by buying Red Cross Christmas Seals.

It is ***your*** fight—for Humanity's sake. Do ***your*** share for your community. Even one seal will HELP.

RED CROSS
Christmas Seals

If you cannot buy Red Cross Seals in your town, write to AMERICAN RED CROSS, Washington, D. C., for as many as you will sell at 1c each.

THE HEART OF ENGLAND

The following little paragraphs are all genuine. They are taken from the personal columns of the London papers and reveal a noble side of the British nation that must appeal to all.—THE EDITOR.

LADY, middle aged, social position, would willingly correspond with lonely officers. Box L-454, The Times.

CHAPLAIN at the front desires use of small car, also a gramophone and records for the men. Box L-298, The Times.

WILL ANYONE give or provide tuition in motor driving to two ladies, V.A.D., linguists, who have opportunity of serving at front?—Box M.563, The Times.

WILL any disabled officer sell army revolver, compass, and binoculars, cheap to young officer? Box 385, Harrod's Advertising Agency, 32 Hans-Crescent, S. W.

CAPTAIN DOUGLAS PASS, 1/1st, Dorset Yeomanry, wounded and missing August 21st, Gallipoli, is now known to be a Prisoner of War in Turkey.

LADY, fiance killed, will gladly marry and give up life to care and happiness of man blinded or otherwise incapacitated by the war. Box Y-499, The Times.

McLAUGHLIN On the 8th Sept., to the wife of the late Edmund C. McLaughlin, Lieut. Sixth City of London Rifles (killed in action, France, 18th May), a son.

TO ANY PATRIOT—Will you guarantee £5 per month for the support of a subaltern's wife and little girl whilst he fights for them and for you? Box M-94, The Times.

WILL anyone sell cheaply Lieutenant going front, revolver, periscope, prismatic compass, flash light, mackintosh with detachable lining, mackintosh sheets? Box M-84, The Times.

C. O.—Public school boy desires nomination for commission. Matriculated 1914; 12 months' military training. First-class Scout; good shot; athlete; references, &c. —Box L.845, The Times.

WILL any kind person give, or lend for the duration of the war, a piano for use of wounded soldiers at the Brook War Hospital, Woolwich? Tobacco, games and books are also greatly needed.

WOULD a wounded officer, one who is lame and unable to get about much, like gay and sympathetic letters from lady living in the country? Box L-290, The Times.

AN OFFICER—Invalided home, is desirous of becoming possessor of dog as companion; bulldog, Airedale, or Aberdeen preferred. Guy Smith's Bookshop, Eastbourne.

WILL somebody give a kind home to a young officer's two very valuable, affectionate and gentle dogs while he is at the front; otherwise they must be destroyed? Box Y-503, The Times.

A MOTHER is anxious for news of the last hours of 9893 Lance Corporal Thomas Pace, London Rifle Brigade, who died of wounds, Ypres, 84 Field Ambulance, Belgium, 4th May. S. P. 99, Holland road, London, W.

IF any of the survivors of the Transport Royal Edward can give any information attending the circumstances of the loss of Major Cuthbert Bromley, 6th/4th Battalion, Lancashire Fusiliers, in the sinking of that ship, his mother, Lady Bromley, of Sutton Coney, Stratford, Suffolk, will be deeply grateful.

JUST A WORD

The Effect of the War on Popular Government is a subject of tremendous importance. Whether or not you believe that "The Kings Must Go" as we said in our editorial of August 2, you will be interested to read an article soon to appear in The Independent in which Senator Theodore E. Burton explains his views on the question.

The fact of war in Europe is shockingly familiar to every American citizen, but how near the sober realities of it are to our own border can only be fully realized by crossing into Canada. At Niagara Falls the bridges are patrolled by soldiers with fixed bayonets who not only look serious, but are quite ready to take forcibly in charge any person whose manner awakens suspicion. At Niagara on the Lake a big and busy camp has thousands of men in active training for the front. In Toronto the signs of war are everywhere, and recruiting goes forward daily. Mr. Geddes Smith, of the editorial staff of The Independent, will shortly give the story of a recent tour of observation in Canada with reference to the way in which its people are meeting the crisis which has already sent a hundred thousand of her young men to the battle-fields of Europe, while as many more are in training for early departure.

REMARKABLE REMARKS

SECRETARY DANIELS—I am a very promising man.

ED HOWE—I occasionally receive an agreeable letter.

MARIE CORELLI—I wonder where the Poet Laureate is?

MRS. R. L. BAKER—In America $10,000,000 is spent for paint.

JACOB H. SCHIFF—Prosperity has come and prosperity is going to stay.

MRS. THEODORE ROOSEVELT—I didn't raise my boy to be the *only* soldier.

WILLIAM H. TAFT—The term of the President should be six or seven years.

R. R. PRESIDENT PEYTON—The railroads of America offer an incomparable service.

SENATOR CUMMINS—The railroads are trying to mislead and pervert the judgment of the people.

ELLA WHEELER WILCOX—No woman can love a man and desire to be thought the head of the house.

REV. ARCHIBALD A. LITTLE—There is not a grave in the cemeteries of Atlanta that has not been dug by sin.

MISS MARGARET WILSON—When we were frightfully poor my parents engaged a cultured German governess.

CHAMP CLARK—The president has more power than any hereditary potentate, and that is why I want the office.

HELEN ROWLAND—"Indignation" is just another word for the thrill a girl feels when she is kissed against her will.

REV. DR. FRANK CRANE—Whose chances would you rather take in the Day of Judgment, Woodrow's or William's?

RABINDRANATH TAGORE—I dived down into the depths of the ocean of form hoping to gain the perfect pearl of the formless.

JUDGE J. B. HANDY—The only person I ever heard of who wished to put a stop to kissing was a female policeman in New Jersey.

PROF. GEORGE SANTAYANA—The man whose success is merely personal—actor, sophist, millionaire, aesthete—is incurably vulgar.

LEONARD SCHLITZ, BREWER—The use of candy in dry states has increased almost proportionally to the decrease in the use of liquor.

CHRISTABEL PANKHURST—German Kultur means and is the supremacy of the male. It is maleness carried to the point of obscenity.

JAMES MONTGOMERY FLAGG—If you have some children you don't care about, a very nourishing supper may be prepared from cigar ashes and mashed peas.

U. S. SENATOR PHELAN—The Pacific Mail left the Pacific, not because of the La Follette Seaman's law, but because it could make more money, on account of the war, in the Atlantic.

FRANCIS L. GARSIDE—Be patient with the girl who is slow in getting around to help her mother getting breakfast. Perhaps she is busy looking for the daily piece of poetry to brighten her life.

HENRY LEON WILSON—At least 85 per cent of our book reviews are mere amiable perfunctory echoes of the enthusiastic "canned" review which the publisher obligingly prints on the paper jacket of his best seller.

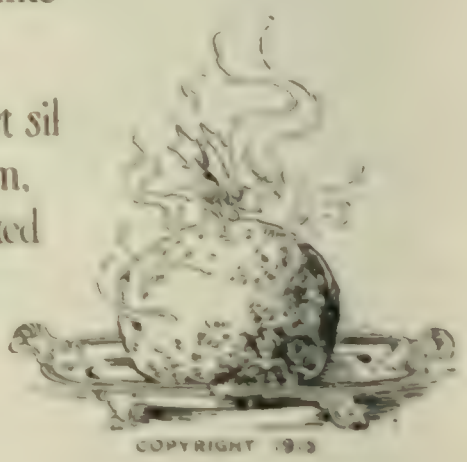
LORD ROSEBERRY—I know nothing more disheartening than the announcement that the U. S.—the one great country left in the world free from the hideous, bloody burden of war—is about to embark upon the building of a huge armada.

MRS. H. R. BAGAL—Have your surgeon pierce your nose horizontally, above the nostrils and just under the bridge; then order from your jeweler a little straight gold bar with a diamond set in one end; run it thru the perforation, and—you're right up to the minute in fashions.

STERLING

GORHAM
Gifts of Silverware
The Christmas Sentiment
That Endures

Of all the occasions for giving, more sentiment attaches to Christmas than to any other season in the calendar of human affections.



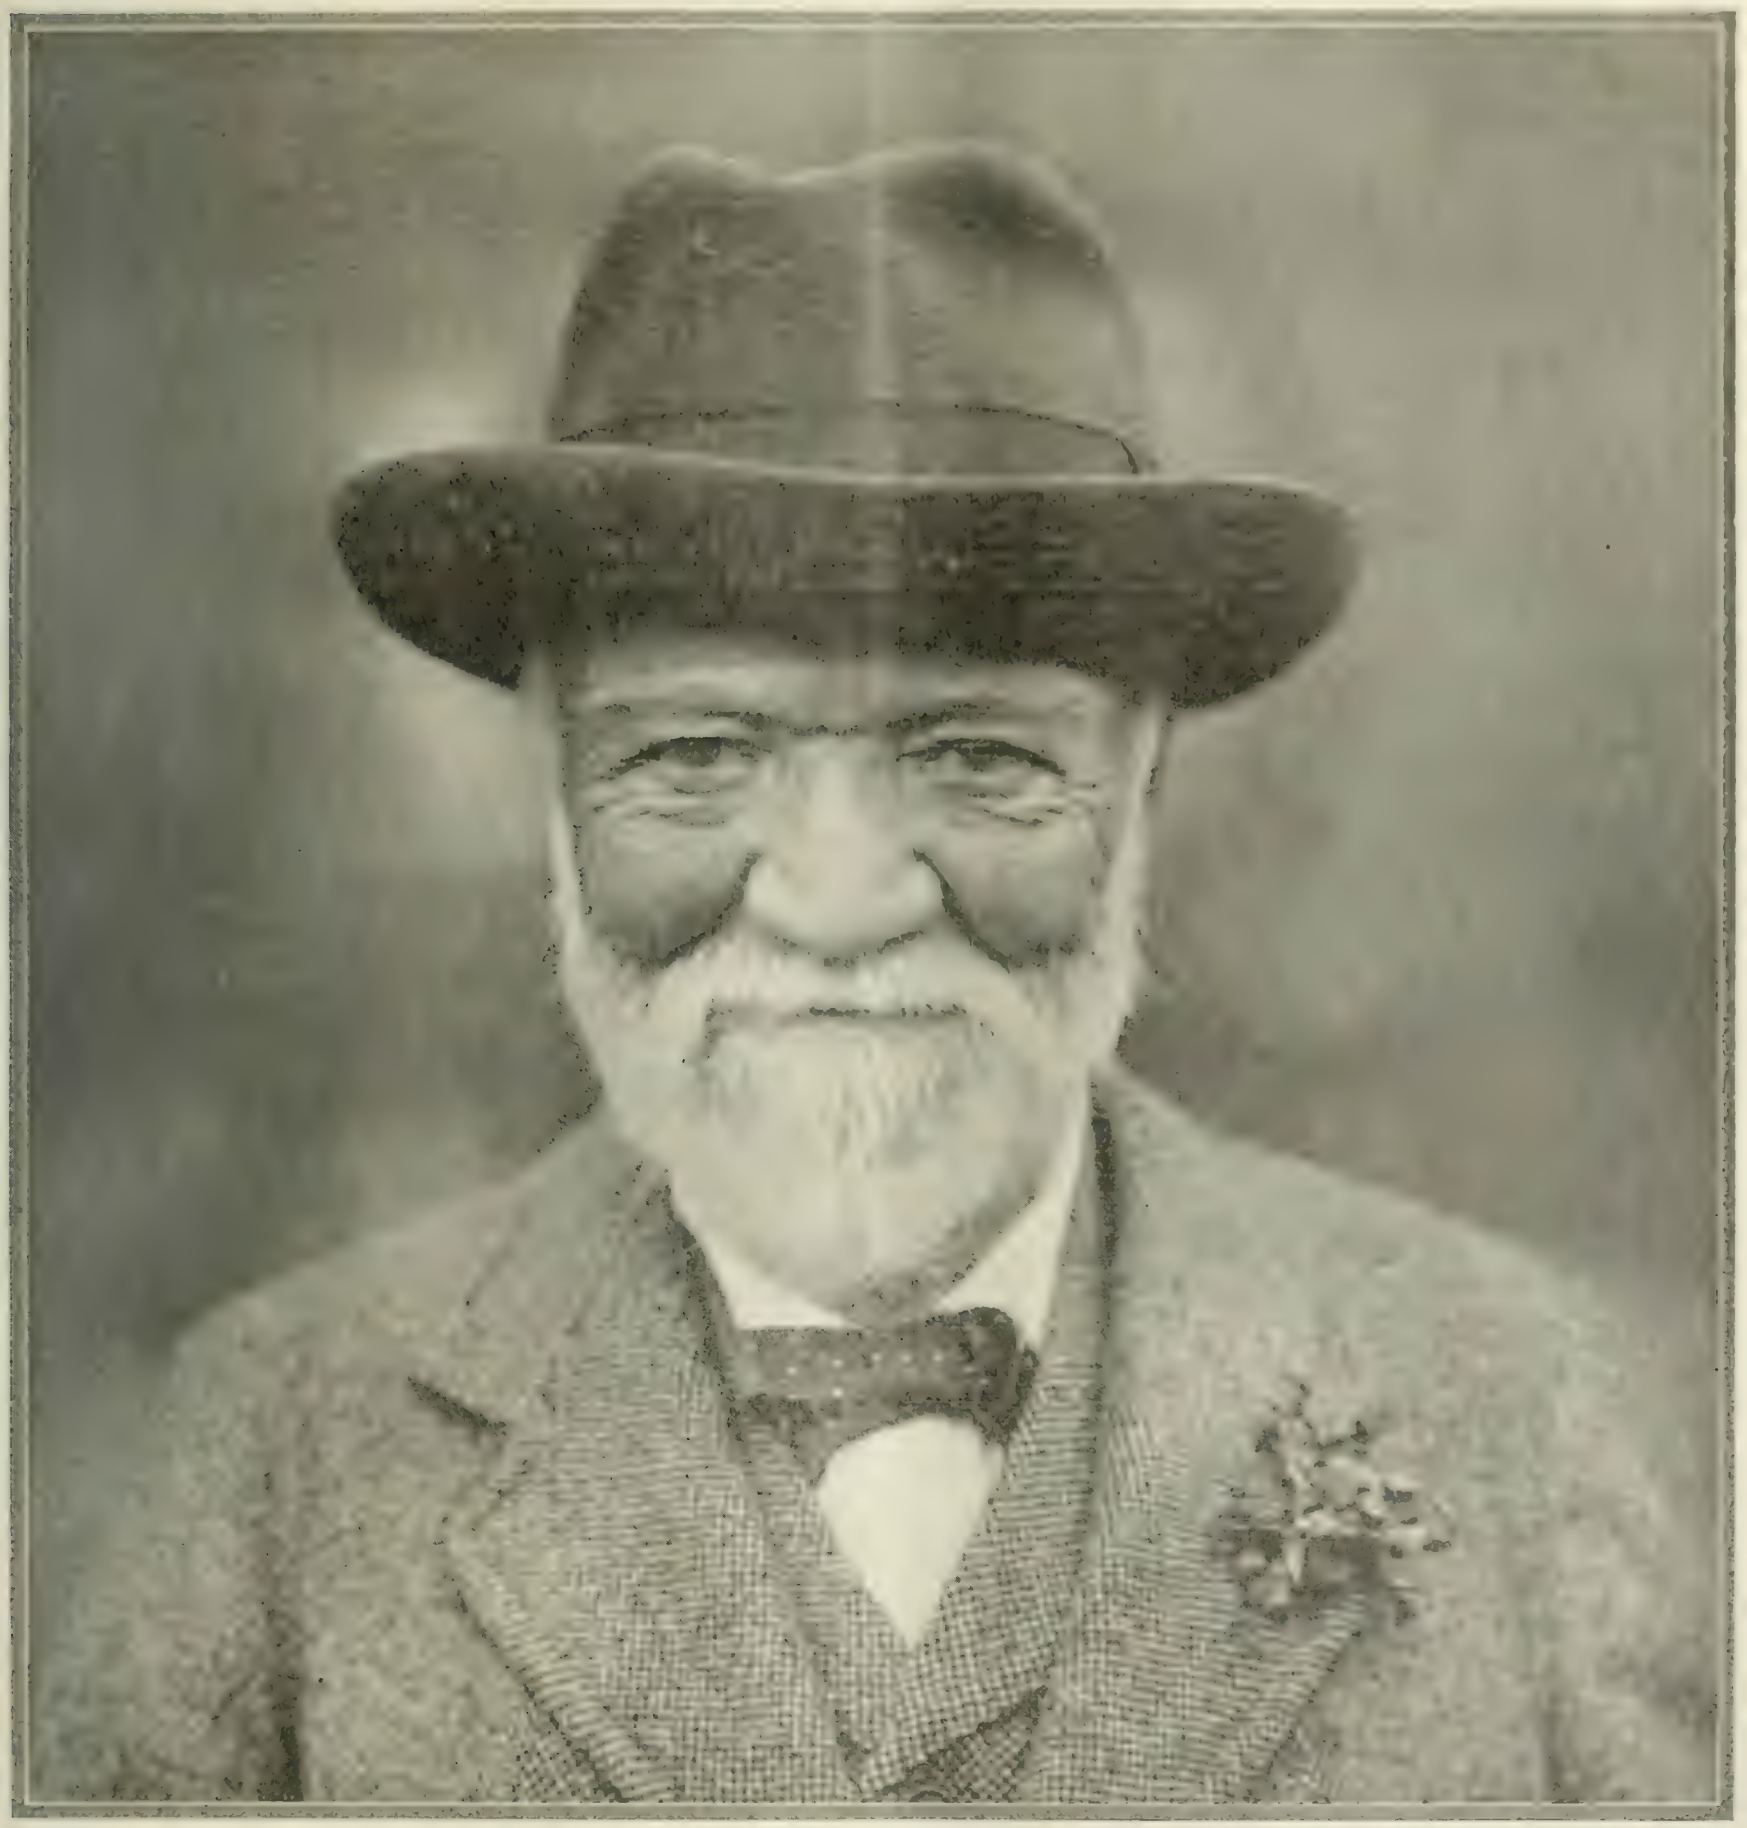
And of all Christmas gifts, few so appropriately express the enduring quality of the Christmas sentiment, as a gift of Gorham Silverware.

Its lasting character serves not only to commemorate one Christmas, but renews through many anniversaries, its message of goodwill.

It is important to remember, however, that silverware without the Gorham insignia and name is like Christmas without mistletoe and holly.

This famous trade mark will give the simplest silver tribute consequence and charm, whereas its omission will be regretted like an absent friend.

STERLING



GORHAM SILVERWARE is sold
by leading jewelers everywhere.

"THE WORLD GROWS BETTER"

ANDREW CARNEGIE'S MESSAGE ON HIS EIGHTIETH BIRTHDAY, THANKSGIVING DAY, IS ONE OF CHARACTERISTIC OPTIMISM, CORROBORATED BY THE SMILING GREETING OF HIS LATEST PHOTOGRAPH

THE PARAMOUNT ISSUES

THERE are three great questions now before the American people.

First, how can the Great War be stopped?

Second, how can all war be stopped?

Third, how far shall the United States arm itself?

Are there any better answers to these questions than the following:

First. Call a conference of the neutral nations dedicated to a just settlement of the war.

Second. Establish when the war ends a League to Enforce Peace which will create the machinery for the settlement by peaceful means of disputes between the nations, and require by force if necessary the nations to avail themselves of it.

Third. Adopt President Wilson's program of national defense provided it can be done without a great increase of national expenditures, as may be done if proper economies are introduced into the army and the navy.

COMPULSORY SERVICE IN A DEMOCRACY AT WAR

THE great British campaign for voluntary enlistment is nearing its appointed end. This does not mean, of course, that recruiting is to stop on any specified day. But on December 11 Lord Derby, to whom the task of mobilizing the nation's human resources has been entrusted, must balance his books and give an account of his stewardship. Then England must look the facts in the face and make its decision. It is likely to be a momentous decision.

If Lord Derby's campaign is an unqualified success, if it produces as many volunteers as the Government, who alone know the facts, believe to be necessary to enable England to do its full share among the Allies in the prosecution of the war, the problem will have vanished. Then only the case-hardened advocates of universal military service will dare or care to continue to demand conscription. But if the campaign falls short of full success, it will be another story.

In that event what should England do? Should it sacrifice its traditional and time-honored aversion to compulsory military service? Should it follow the example of the United States at a dark hour in the Civil War and draft the unwilling? Should it resort to conscription?

The answer to this question is of vital interest to Americans, not only because of their kinship to Englishmen in origin, in speech and in political ideals, but because it involves a fundamental question that not inconceivably the United States might some day have to answer for itself. That fundamental question is this: What should be the attitude of a free democracy toward compulsory military service—in time of war?

The convictions of the vast majority of the American people, like those of the vast majority of the British people, on the subject of compulsory service in time of peace are beyond question. Neither people will have aught to do with it. But does war alter the case? Can that become admirable and desirable in time of war which in time of peace is by common consent vicious and abhorrent?

The great reader of the hearts of men and interpreter of human aspirations put into the mouth of the aged Polonius a pregnant saying:

> Beware
> Of entrance to a quarrel; but being in
> Bear't, that the opposed may beware of thee

In this day of the world we are putting heavier and heavier emphasis upon the first half of the maxim. The common detestation of war and the common conviction that no effort to avert its evils is too great are strengthening every day. The Great War has driven home as it has never been driven home before the truth that mankind has no more vital task before it than that of ensuring the settlement of differences between nations by peaceful means. But until this task is fully accomplished, until the nations of the world shall have actually ceased from appealing to arms for the composition of their disputes, there is always the possibility that the most peaceful nation may find war thrust upon it. Such has been the fate of these United States at least three times in their history. Such is the fate of Great Britain at this moment.

Then comes into play the second half of the Shakespearean maxim. *Being in*, and being in, it is assumed, thru no fault of its own, it is a nation's duty not to let itself be defeated. Drawn into war for a righteous cause and in spite of every best effort to compose the quarrel by peaceful means, a people have no alternative but to bend their every energy to win. Such is the position of England at this moment. Such might be our position at some unexpected moment in the future.

If the English people do not believe that England is fighting for a righteous cause, England has no business in the war. If they do believe their cause is just—and who can doubt that they do so believe?—England has no business to spare a single available shilling or a single available man from the task of defeating the champions of injustice. If this means conscription, to conscription they should come.

It is true, as Matthew Arnold said half a century ago, that the very idea of conscription is at variance with the "English notion of the prime right and blessedness of doing as one likes." This is an attractive way of expressing the Anglo-Saxon devotion to the ideal of personal liberty. But there are times when even that high ideal must perforce be sacrificed to the common good. If, in the best judgment of those to whose care has been confided the conduct of the nation's affairs in this hour of crisis, England needs more men than have voluntarily come forward at their country's call, this is evidently such a time. England must mobilize its strength until the need is met.

If ever we should be in England's case—which God forbid!—the same responsibility would be ours. Once already we have felt the need, and our greatest leader and truest democrat did not hesitate to make the choice

The unwilling were drafted, the nation was saved, and democracy and humanity were the gainers.

THIS FABLE TEACHES

IF the name of Mr. Justice Hughes is not to appear on the Republican primary ballot in Nebraska the name of ex-President Roosevelt is to appear there.

It is an amusing incident. Two years ago some Roosevelt enthusiasts filed a petition calling for the submission to the Republican voters of the state in the presidential preference primary of the name of the Progressive leader. Now some of them at least have changed their minds. They have tried to undo the work of their moment of premature enthusiasm. But the law does not seem to provide any way for them out of their predicament.

Unless Mr. Roosevelt declines, as Justice Hughes has done, to have his name appear, there it will stay. Mr. Roosevelt is as mum as Br'er Rabbit.

Some of the chronic opponents of the popular selection of party candidates have seized upon this little incident as a portentous argument against presidential primaries. It is nothing of the kind.

It is merely a warning against precipitancy. It is one thing to know your own mind and quite another to be perfectly sure that you will not want to change it when the time comes.

AS YE WOULD THAT—

Do your Christmas shopping early!

POETRY OF THE WAR

ON account of the common belief that a great war always produces great poetry, there has been some disappointment exprest that this, the greatest war which the world has ever known, has not yet found adequate literary expression in any of the twelve nations involved or among the neutrals, who are almost as deeply concerned. But we must remember that, while war has been the mother of much of the world's best literature, it is not the biggest battles which have inspired the greatest poetry. Troy was an obscure town in Asia Minor. Balaclava was not one of the fifteen decisive battles of the world. The Song of Roland, which became an epic in five languages, originated in a small skirmish where a band of Basques attacked some French soldiers passing thru a defile of the Pyrenees, and among those mentioned as having fallen was one Hruotlandus.

Literature seeks the dramatic, not necessarily the important, event, and the dramatic means the personal. This vast impersonal and machine-made war dwarfs the individual, and even human passions seem lost in its immensity. Poets are always belated in their language and so are rarely at ease except in dealing with the past. They persisted in talking of swords and spears long after men had taken to rifles, and now they stick to the rifle and shy off whenever trinitrotoluene and chlorine gas are mentioned in the dispatches.

The London *Times* republished in a supplement August 9, 1915, the best poems which had appeared in its columns during the first year of the war. There are sixteen of them, by such men as Bridges, Kipling, Hardy, Noyes and Tagore, a fine collection of patriotic verse, to be sure, but containing nothing more inspired or inspiring than are written in almost any common year of peace. The "Wake Up, England!" of the Poet Laureate has no line as good as its title, and that is borrowed from the Guildhall speech of the King when as Prince of Wales he returned from his trip around the world. Unfortunately, England did not heed his warning, but merely rolled over and went to sleep again. Kipling's lines, "For all we have and are," do not compare with his preparedness poem, "The Islanders," of 1902. They do not have half the moving force of one of his old quatrain tags such as

> If England was what England seems
> An' not the England of our dreams,
> But only putty, brass an' paint,
> 'Ow quick we'd chuck 'er! *But she aint.*

And William Watson, once known as "the poet with the serpent tongue," brings forth in all seriousness lines like these:

> As rose the murky sun,
> Our men the North Sea scanned,
> And each rejoicing gun
> Welcomed a foe at hand
> And thundering its delight,
> Opened its mouth outright,
> And bit them in the bight,
> The Bight of Helgoland.

Unfortunately, the best poem the war has produced is also the worst, the *Hassgesang* of Ernst Lissauer, which we published in the fine translation of Mrs. Henderson in our issue of November 2, 1914. This outburst of Judæo-Germanic genius has almost the ring of one of the imprecatory psalms and came just at the time to voice the feeling of the nation in its *Gott strafe England!* period. But in the year since then Germany has outgrown such violent manifestations of malignity, and even Herr Lissauer has recently published a deprecation, which comes near being an apology for the poem which gave him world-wide fame and brought him a decoration from the Kaiser. Among the British, at whom it was directed, it aroused more amusement and admiration than resentment. We read of a trench concert somewhere in France where the sergeant in charge of the program announced: "Our friends Fritz and 'Ans, who are now staying with us, will now favor us with their halways popular 'Ymn of 'Ate."

Mr. Lascelles Abercrombie in his article on "The War and the Poets" in the October *Quarterly Review,* finds "the voluble versification for which the war is immediately responsible" enough "to make the hardiest critic blench a little." But in the "quite prodigious welter of tolerable mediocrity" of poems dealing with single aspects of the war he meets "with one decided encouragement; there is one poet who stands out in this tract in a manner not to be mistaken." The poems he refers to are those of Mr. Gibson, some of which we have had the pleasure of publishing in our issues of October 26, 1914; April 19 and November 8, 1915. We quote in part what Mr. Abercrombie says of them:

> Mr. Wilfrid Gibson's "Battle" poems are not only in intention the exact type of this kind of poetry, but they carry the intention into a decidedly conspicuous success. They are extremely objective; a series of short dramatic lyrics, written with the simplicity and directness which Mr. Gibson chiefly studies in his exceptional art, expressing, without any implied comment, but with profoundly implied emotion, the feelings, thoughts, sensations of soldiers in the midst of the actual experiences of modern warfare. The emotion they imply is not patriotic, but simply and broadly human; this is what war means, we feel; these exquisite bodies in-

sulted by agony and death, these incalculable spirits devastated. What all this destruction is for, is taken for granted. Modern warfare is not beautiful, and Mr. Gibson does not try to gloss it in the usual way, by underlining the heroism and endurance it evokes. All that is simply assumed in these poems, just as the common soldier himself assumes it. An almost appalling heroism is unemphatically revealed in them as the fundamental fact of usual human nature. This is the ground-bass; and above its constancy plays the ever-varying truth of what fighting means to some individual piece of human nature. The poems are moments isolated and fixed, out of the infinite changing flux of human reaction to the terrible galvanism of war. But that thrilling galvanism does not alter human kind; and sometimes Mr. Gibson forces us to realize the vast unreason of war by bringing into withering contact with its current a mind still preoccupied with the habits of peace.

Besides these battle lyrics of Wilfrid Gibson's, Mr. Abercrombie finds especially worthy of commendation John Masefield's poem "August, 1914," Thomas Hardy's "Song of the Soldiers," and the five sonnets entitled "1914," written by the young poet, Rupert Brooke, of whom Mr. Lloyd R. Morris speaks in another part of this issue. Considering these four men he concludes "that no other war in our whole history has been instantly transmuted into poetry of purer gold."

CONDITIONED AND UNCONDITIONED SOVEREIGNTY

AT the annual dinner of the Chamber of Commerce of the State of New York, held last week in this city, Mr. Darwin R. Kingsley, president of the New York Life Insurance Company, made a speech that goes to the very heart of the question of war and peace.

He devoted himself to two questions: First—What was the fundamental error in the civilization of the world on August 1, 1914?

Second—What fundamental change must be made in order to correct that error?

Mr. Kingsley finds the "fundamental error" to be the unconditioned sovereignty prevailing in an age when steam and electricity have annihilated time and space and the whole world is reduced to a neighborhood. "In such an age, and in a world so small, a civilization based on eight great aggressive, unyielding, unconditioned nationalities, is no more possible without recurring war than that two solid bodies should occupy the same space at the same time under the law of physics. So long as there are even two great unconditioned sovereignties in the world there can be no lasting peace."

Under this false doctrine, says Mr. Kinglsey, wars must continue unless one of two things happens. Either some nation must reduce all the others to impotency and impose its civilization on them, or else the nations must federate themselves into a League to Enforce Peace,—a world State. The first alternative is world imperialism. The second is world democracy.

As the day would seem to have forever past when one nation or group of nations can enslave the world, we must then be resigned to live in our present state of unconditioned sovereignties with never-ending wars or else establish a League to Enforce Peace.

The latter is the "fundamental change" that Mr. Kingsley would have the world make. And in this transcendent endeavor he would have the United States lead. "For the United States has shown how so-called sovereign states can be merged into a larger state without losing their individuality and without parting with democratic principles. She has shown how local citizenships can coalesce into a master citizenship and yet remain vital.

The United States should prepare to join a League to Enforce Peace. "If to do that the doctrine of unconditioned sovereignty must be abandoned, if as a nation we must surrender what each colony seemed to surrender in 1789, we should stand for that. We should find when the time came—as our fathers did—that we had only surrendered a little false pride, a little hate, a little prejudice and a little fear, and had entered, as our colonies did, upon the only order that leads to peace and true happiness."

It is a great thing that there are Americans today who are working as zealously and courageously for the formation of the United Nations as the fathers worked for the formation of the United States. Our modern Federationists, Kingsley, Lowell, Marburg and Taft, are worthy successors to the old Federalists, Hamilton, Madison and Jay.

The spirit of '76, thank God, still survives.

THE FINE ART OF GIVING

TO give away $400,000,000 wisely requires more ability and of a rarer kind than to accumulate it. Mr. Carnegie on his eightieth birthday is to be congratulated on having made so few enemies and aroused so little serious criticism. All of the objects which he has endowed—public libraries, professors' pensions, scientific research, industrial education, and promotion of peace—are universally recognized as worthy, and the only fault found with them has come from those who thought he should have done something more or something else.

As we pointed out many years ago, Mr. Carnegie is entitled to be called "the greatest socialist in the world." For the fundamental principle of all the various forms of socialism is the transference of private wealth to public purposes. If, then, socialism consists in actually accomplishing this instead of merely talking about it, Mr. Carnegie is a greater socialist than any who bear the name, from Karl Marx and Lasalle to Liebknecht and Jaurés. His gifts for library buildings are conditional upon the community providing the site and agreeing to support the library to the amount of at least ten per cent per annum of what he gives, so in the course of time his original donation will be but a small part of what he has induced others to give. It is, then, not $400,000,000 but more than ten times that which he has caused to be transferred from private to public and semi-public uses.

Reformers are apt to consider themselves rather radical if they advocate the imposition of a tax of twenty or fifty per cent on great fortunes. But Mr. Carnegie has gone far beyond their most ambitious schemes in that he has during his lifetime voluntarily contributed ninety-five per cent of his total wealth.

YOU NEVER CAN TELL

WHEN the Great War broke out the New York Stock Exchange closed its doors. It was the last of the great exchanges of the world to take this unusual step. It was only done when it seemed clear to its governors that it was the only way to avoid financial panic. The anticipated danger was a flood of selling orders for American securities from Abroad.

During the three months of idleness for the exchange

the problem which persistently tormented the financial world was how this country was to absorb without disaster the vast quantities of American stocks and bonds which Europe was sure to dump upon us as soon as a channel for their sale was reestablished.

The exchange reopened. The heavens did not fall. The flood of foreign selling did not materialize. Prices went up, not down. The market here absorbed all the American securities that were offered from abroad and thrived on the diet. It thrived, and asked for more.

The other day in the House of Commons the Anglo-French loan in the United States was under discussion. There was a certain amount of criticism of the Government for having resorted to the method of a foreign loan to solve England's financial problem. Various alternatives were suggested, and the one which seemed to arouse the greatest interest was a proposal for compelling British holders of American securities to put them at the disposal of the Government for the purpose of raising money to carry on the war.

Time has changed the face of things. The flood which we not unreasonably feared was dammed at the source by the recognition by British investors that in these times of European disaster American securities are pretty good things to have. Now the British authorities themselves are considering whether there is not some way in which they can insinuate a hole into the dam.

All of which suggests that it is not always the expected disasters that happen. You never can tell.

OH, REFORM IT ALTOGETHER

IT is reported that President Wilson proposes that the money for his projects of national defense shall be found in the pork barrel. He will urge Congress to pare to the bone the expenditures for public buildings and river and harbor improvements, and leave the money to be used in bettering our naval and military establishments.

This is admirable on all accounts.

The new program must not be financed with borrowed money. It is bad economics and bad patriotism to saddle expenditures like this on coming years. A bond issue in time of peace to finance a program of preparedness for war ought to prove the political death knell of any administration that should urge it. It is likewise the part of wisdom to have the burden of such expenditures so fall upon those who authorize them that they will really feel its weight. We should all be a little more cautious about giving enthusiastic support to an elaborate program of expenditure if we were to see the concrete result of it in our own income tax bills.

But the proposal is also admirable because of the blow it will strike at the pork barrel system if carried out. That system, by which we spend unbelievable millions not because the nation needs the things for which it is spent—in the way of public buildings and putative waterway improvements—but because individual senators and congressmen need the personal prestige that comes from getting the things done in their districts, is a national disgrace. Anything that will diminish its extent is a consummation devoutly to be wished. If the President really intends a foray against this stronghold of extravagance and personal aggrandizement we can only wish more power to his arm.

But has he stopped to consider that the sign of the pork barrel is to be found not only on public building and river and harbor bills, but in other directions as well. A fifty thousand dollar post office in a town whose size would hardly justify one costing a tenth as much is no more of a public disgrace than a navy yard whose position violates every principle of sound naval practise or a military post whose position is strategic only from the point of view of some Congressman's next political campaign. Here is a good place for the first assault—we had almost said upon the pork barrel, but since that would be a little equivocal, let us say—upon the pork barrel system. Let the President recommend and insist upon, with that persistence that he has shown himself so effective in using, the abolition of the useless navy yards and the superfluous military posts. He will then find himself in a tremendously strong position to ask for appropriations for national defense. Incidentally he will be doing an act of splendid public service in itself.

AN ODE TO THE POTATO

Singt mit mir das Ehrenlied
Den Pflanzer der Kartoffel.

THAT is the way the verses begin in the Berlin *Tageblatt;* "Sing with me the triumphal song of the potato plant." For the author, Dr. Stanjak, thinks it time that the true "Savior of the Fatherland" should receive its due tribute of literary laurels. Poets had better turn their talents in this direction than in composing "hymns of hate," for, as he says:

> You have sung hymns to heroes. On the field of battle you have called down the wrath of God upon our enemies. You have composed poems in honor of our guns, our fleet and other things which have helped us in the war, but you have ignored the potato, which is frustrating our enemy's diabolical plan to starve us into submission.

He is quite right about it. If it had not been for the prompt mobilization of such field forces as the potato and the sugar beet the Germans would hardly have held out till now. Last summer every patch of spare land in the country, every vacant lot in the city, was put into vegetables cared for by the women, children and old men. If, then, America is blamed for sending deadly weapons to Europe, she ought to get some credit for having produced the potato, on which Europe has so largely subsisted for the last hundred and fifty years.

"Somewhere in France" there is, we believe, a monument to Parmentier, who persuaded his countrymen to eat this strange tuber. Sir Francis Drake and Sir Walter Raleigh, who introduced it into England, have plenty of monuments, but for deeds of theirs less worthy of commemoration. To Napoleon belongs the credit of launching the sugar beet upon its career, but it was not this that made him famous. One of the greatest men America has produced, Benjamin Thompson, known over the water as Count Rumford, has a monument erected to him in Munich because it was he who taught the Bavarians how to make potato soup.

But perhaps poems and statues are unnecessary to honor that prehistoric Burbank who first grew the potato in America, and those who fought popular prejudice to get it introduced into Europe. It would be sufficient to erect in any farm or market garden the inscription which is carved upon the tomb of Christopher Wren in St. Paul's, London: *si monumentum quaeris circumspice.* "If you seek his monument look around you."

THE STORY OF THE WEEK

The Macedonian Cry

The Serbian army has been practically driven out of old Serbia and only holds the southern tip of the Macedonian territory annexed by Serbia in the Balkan war. Here at Monastir, within ten miles of the Greek frontier, some 25,000 Serbian troops are still holding out with the help apparently of a few British and French. When the Bulgars forced Babuna Pass it gave them access to the valley of Monastir, but instead of pressing on to take that city as it seemed they could and as it was reported they had, they wheeled to the left and attacked the French on the Cerna River, a tributary of the Vardar. The French had been sent up the Vardar and crost the Cerna in the hope of reaching Babuna Pass in time to aid the Serbs who were holding it against an overwhelming force of Bulgars. But the French were just a bit too late. When they were within ten miles of the Pass the Serbs were expelled from the Babuna Mountains and forced to evacuate the town of Prelepe. When the Bulgars turned in their direction the French recrost the Cerna and retired down the Vardar River to avoid being caught between the Bulgarian forces to the east and west of them. It is said that now about 125,000 French and British troops have been landed at Salonica and more are being brought daily. Whether they will attempt to regain Serbia or will invade Bulgaria in the direction of Sofia, the capital, or will undertake an advance upon Constantinople from the west thru Bulgaria and Thrace remains to be seen.

In the north the Serbian army has been completely crushed out. The Austro-German and Bulgarian forces claim to have taken more than a hundred thousand prisoners and large numbers have fallen on the field of battle, for the Serbs have contested every step of the way with the greatest courage and stubbornness. The remnant of the Serbian army, probably less than a hundred thousand, have been driven back into Albania and Montenegro. The aged King Peter of Serbia has taken refuge with aged King Nicholas of Montenegro at Cettigne. The Serbian Government is established at Scutari, the city which was captured by the Montenegrins in the Balkan war but restored to Albania by the European Powers.

The Serbs made their last stand between Mitrovitza and Prishtina on the historic plain of Kassovo, the "Field of the Blackbirds," about which much of their folk tales and songs are concerned. For it was here in 1389 that the Turks under Murad I conquered the Serbs and so gained dominion over all the Balkans. Here, too, in 1448 the Hungarians under John Hunyady were defeated by the Turks.

Rumania is like Greece trembling in the balance and anxiously waiting to see which side will come out ahead, for a mistake in the choice of sides would be fatal to the country. Russia is reported to have collected an immense army furnished with Japanese munitions on the Rumanian frontier and about the port of Odessa for an attack upon Bulgaria from the northeast. But in order to get at Bulgaria by land it will be necessary for the Russian troops to cross Rumania as the British and French have had to cross Greece to get to Serbia. Since Rumania has an army of three or four hundred thousand, not weakened like the Greek, Bulgarian, Serbian and Turkish by the Balkan wars three years ago, it is a matter of importance which side she espouses.

THE GREAT WAR

November 21—Kitchener confers with King Constantine. Austrians take Novibazar.

November 22—Partial blockade of Greece by Allies. German protected cruiser "Frauenlob" sunk in Baltic by submarine.

November 23—Italians take Podgora Hights overlooking Görz. Bulgars drive back French to Vardar River.

November 24—Austrians take Mitrovitza. Germans take Prishtina.

November 25—Orient railroad opened from Belgrade to Constantinople. Heavy firing on Gallipoli.

November 26—Greek Government consents to allow Allied troops freedom of action. French people contribute $4,000,000,000 to the "victory loan."

November 27—Serbs retake Krushevo. Artillery duels in Argonne

November 28—Arabs attacking British outposts in Egypt. British twelve miles from Bagdad.

The Attack on Görz

Apparently the visit of Earl Kitchener to the Italian front put new life into the army, for the attack upon the Austrian cities on the Isonzo River, which had languished during the summer and fall, has been reundertaken with the utmost vigor and with considerable prospect of success. It appears that the Austrians were wrong in withdrawing part of their troops on this front for use in Serbia on the assumption that the Italians had practically given up their efforts in the offensive.

HOLDING HIS BREATH

The French soldier of the new school is not afraid of the poisonous gases diffused by the German bombs because he carries a supply of condensed air with him in the trenches

the Italians have gained all the other peaks of the Monte Nero group in addition to the summit which they took three months ago. This enables them to bring their guns to bear upon the city which lies on the Isonzo River, about seven miles below Monte Nero. The Italians are now trying to force the bridge leading across the river to the city.

The main efforts of the Italians are, however, directed at Görz, which, if they capture it, will be known to the world as Gorizia. This city lies about half way between Tolmein and the sea, and its capture would open the way to Triest, the chief objective of the Italians in this direction. Görz is dominated on the west by Podgora Hights and Mount Calvario, on the Italian side of the Isonzo River and about three miles from the city. These have been captured by the Italians by a series of persistent charges against the Austrian entrenchments in which thousands of men fell.

About six miles south of Görz and on the same side of the river is San Michele, a six hundred-foot bluff on the end of the long limestone ledge stretching down the coast known to geographers and geologists as the Karst or Carso. Just beyond San Michele is the church and village of San Martino del Carso, or St. Martin's of the Karst. These points, now held by the Hungarian forces, are being furiously attacked and, it appears, are being gradually gained by the Italian troops.

From the hights that have been taken to the north, west and south of Gorz the heavy artillery of the Italians have been trained upon the Austro-Hungarian defenses and the city itself. Howitzers throwing a thirty-four centimeter (13½ inch) shells have for the first time been brought into play here by the Italians. According to Austrian accounts the city has suffered terribly from the bombardment. The city hall, episcopal palace and churches containing works of art and historic interest of inestimable value have been destroyed. The residential section was showered with shrapnel and incendiary shells for two days and nights. The way of escape was shut off by the bombardment of the roads leading out of the city and the inhabitants driven from their burning homes were often killed in the streets.

Four children asleep in a room on the Via Castello were blown to pieces by a grenade.

Winter Campaigning in Russia

According to the Petrograd reports the Germans have practically abandoned the offensive and are establishing themselves on lines suitable for permanent defense. These are at some points considerably in the rear of the lines they have reached. Kovel, for instance, one of the places which the Germans are said to be fortifying with concrete, is twenty-five miles west of the village of Czartorysk on the Styr River, where the fighting is now going on. They are also reported to be preparing for the evacuation of Mitau, which lies about twenty-five miles southwest of Riga and has been the base for the operations directed against that city. A

THE ATTACK ON GORZ

The Italians are making desperate efforts to take the city of Görz or Gorizia. They have captured the hights of Podgora, just across the river, and Mount San Michele, twelve miles southwest and on the same side of the Isonzo as Görz

A KNIGHT OF THE MODERN TIMES

Equipped with steel helmet, respirator, goggles, revolver and bowie knife, the French soldier ready for a charge looks as grotesque as a knight of the olden times

large part and the best of the German troops have been withdrawn from Russia to take part in the invasion of Serbia and the older men of the reserves are being sent to take their places. Field Marshal von Hindenburg is said to have addrest the latest batch of such reinforcements which has sent to him in the following significant words:

> I know none among you adopted a military career. I know each of you left a family. Therefore I shall not demand reckless attacks from you, but I hope you will beat off the attacks the Russians make.

Since the Austro-German line extends from the Gulf of Riga to Rumania, a length of over six hundred miles, its complete fortification would be an unparalleled feat of military engineering. The fortifications are said to consist of four lines of entrenchments with bomb-proof shelters for the men, lined with concrete and heated by steam. In front of the trenches are barbed wire entanglements and behind are field railroad lines leading to the supply bases in the rear. Power drills have been provided for the sappers, who will thus be enabled to put blasts into the frozen soil. The uniforms and shelters of the troops are covered with white cloth so as to be inconspicuous against the snow. Instead of tents, troops in the field will be housed in knockdown cabins which can be heated and easily moved about. By such

HOW JAPAN IS HELPING HER ALLIES

Japanese shipments of guns and ammunition sent to the Allies at Brest-Litovsk, but captured by the Germans

measures the Germans hope to overcome Russia's historic defender and the conqueror of Napoleon, "General Winter." Hindenburg has declared that any officer who lets a single soldier perish from cold deserves to be shot.

West of Riga the Germans are said to be still retiring, but east of Riga they have come closer to the city than ever before. While the Russians were driving them back from the Aa River, on the west they have swung around to the other side and reached the Dvina or Düna River, about seven miles southeast of Riga. Here they secured a foothold at the village of Bersemünde, on the island of Dalen, which may serve as a stepping stone to the passage of the river. The Russian counter-attack was, it appears, repulsed.

A German aeroplane of the albatross type which had passed over the Russian lines at Dvinsk for the purpose of making a reconnaissance, was prevented from returning by the Russian batteries and aircraft. After flying frantically about over the marsh seeking a way of escape, it was seen to descend. Cossacks on bicycles hurried to the place, but before they found the machine, the two Germans who were in it had frozen to death.

The Capture of Ctesiphon

The British expedition under the command of General Sir John Eccles Nixon, which has invaded Mesopotamia from the head of the Persian Gulf, was divided into two columns when it came to the forking of the rivers. One, under General George Gorringe, proceeded up the Euphrates as far as Nasiriyeh. The other, led by General Townshend, went up the Tigris toward Bagdad. The Tigris party found the Turks established eighteen miles from Bagdad at the historic city of Ctesiphon. General Townshend attacked on the 22d, and after fighting all day captured the city. More than 1300 prisoners were taken as well as large quantities of arms and equipment. The British evidently suffered severely since 2500 are reported wounded. The number killed is not stated.

The Turks attacked several times on the next night after, but were repulsed. General Townshend, however, found it impossible to remain in the place because of the lack of water, so on the following day he withdrew his troops three or four miles down stream. This movement was doubtless what was reported thru Berlin as a severe defeat. But when the British again advanced they occupied Ctesiphon without opposition, for the Turks had retired to a point only ten miles from Bagdad.

Ctesiphon was one of the richest cities of the ancient world, the capital of the Parthian kingdom, the royal residence of Mithridates and Chasroes. It was attacked by several Roman emperors. Trajan and Septimus Severus captured it, but Julian the Apostate here met his downfall. Finally in 637 it was sacked by the Arabs, who found in its palaces and temples enough gold and jewels to make every man in the army wealthy.

Inconstant Constantine

The King of the Hellenes is reported to have veered twice during the week in the difficult course he is pursuing between the two Quadruple Alliances. At first he seemed disposed to concede to the demand from Berlin that he should, in accordance with international law, disarm and intern the Serbian, French and British when they were driven out of Serbia; otherwise the Germans and Bulgars would assert their right to follow their foes into Greek territory.

But the visit of Earl Kitchener, of the British Cabinet, and Denys Cochin, of the French, induced him to abandon this policy and concede in general the demands of the British and French for freedom of operations in the neighborhood of Salonica. But a peremptory telegram from his brother-in-law, the Kaiser, calling upon him to maintain the strict neutrality of Greece under penalty of being treated as an enemy, is said to have caused him to raise dilatory objections to the concession of privileges demanded by the Allies and it is thought that the Allies will again have to resort to pressure to make him comply.

THE BALKAN PUZZLE MAP

The conquest of Serbia is now practically complete. The remnants of the Serbian army have retired into Albania and Montenegro or are awaiting a last stand about Monastir. The Anglo-French troops are holding the Greek Vardar. The Austro-Germans have a chief railway line to Bulgaria, Roumania and Greece are extended ready for use.

The British Secretary for War seems to have used a combination of force and argument in his conversations with the King and his Ministers. He is reported to have called attention to the support which Greece has had from England in gaining and defending its independence and to the necessity of maintaining good relations with England and France. He is said to have declared that England would have 1,000,000 soldiers under arms by next March and that Russia would have 6,000,000, so the defeat of Germany was inevitable.

Then, in order to demonstrate the power of the Allies over Greece, a blockade was threatened and partially put in force. The announcement of the blockade was made by the British Legation at Athens in the following polite and diplomatic language:

Because of the attitude by the Hellenic Government in regard to certain questions touching closely the security and liberty of action to which the allied troops have the right under the conditions of their disembarkment on Greek territory, the allied powers have deemed it necessary to take certain measures which will have the effect of suspending the economic and commercial facilities which Greece has received from them heretofore.

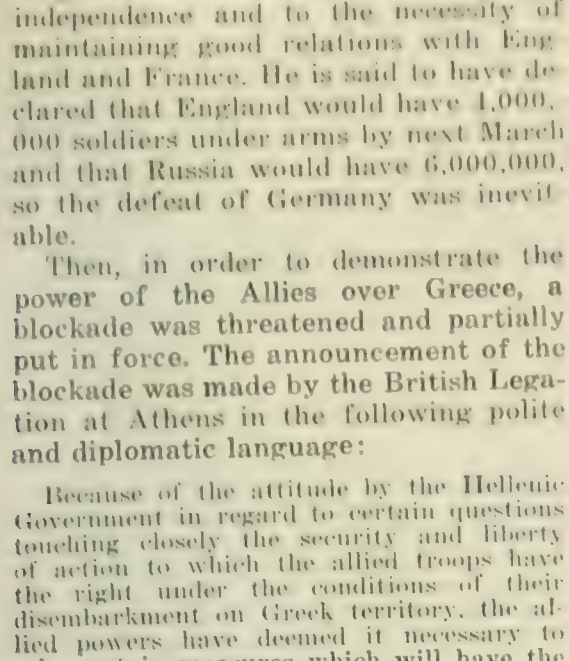
It is not the intention of the allied powers to constrain Greece to abandon her neutrality, to maintain which, in their eyes, is the best guarantee of her interests. The allied Governments have been somewhat disturbed by certain allusions to eventual measures which, if taken by the Hellenic Government, would appear to them to be contradictory to assurances they have received.

As soon as their doubts on that subject —due, no doubt, to a misunderstanding— have been dispelled, the powers will be happy to remove the obstacles now opposed to the arrival of merchandise in Greece and to accord any facilities which result from normal relations.

Premier Skouloudis protested that the French and British troops in crossing Greece into Serbia had already infringed Greek neutrality and if now he permitted them to reënter Greek territory and reform their armies and use it as a base of operations against the Bulgars it would be a further and more serious violation of the Hague rules, for it would force Greece into the position of a belligerent.

Minister of Justice Rhallis, who is the most favorably disposed toward the British of all the Greek Cabinet, said in an interview with a correspondent of the London Daily Mail:

The British Government and the British press are taking a disgraceful attitude toward us. You are wicked. The only thing we want is peace, and you force us to make war. You are starving us. Two more wheat vessels were stopped by you today.



Then, showing an old copy of the Paris *Illustration* containing a picture of the headless mutilated corpses of Greeks after a Bulgarian raid in the Balkan war, he said:

That is what we wish to avoid. You want us to endure it again; you want us to succor you when no English soldiers shed their blood for Serbia, when scarcely an English rifle has been fired.

Your Government has piled fault on fault, delay on delay, and now when you have only a few thousand troops to help us, you want to force us to step in and die.

We do not wish to be another Belgium or Serbia. We love Serbia; but when a father or wife or some one dear to you is drowning and you would like to throw yourself in, you must be sure that the depths are not too great and that the effort is not merely a useless sacrifice.

But after the partial blockade had been in force for four days during which supply ships were held up and commercial cablegrams suppressed the Greek Government yielded on the principal points demanded by the Allies. These concessions permit the Allies to land at other ports than Salonica, presumably Kavala, to use the Greek railroads, docks and telegraph lines, to patrol the harbors, and to expel suspects and censor telegrams. It is said also that the Greek Government has agreed to demobilize or to withdraw the Greek troops between the coast and Serbia so as to leave a free field for the armies of the Allies in their future invasion of Serbian or Bulgarian territory.

PIONEER IN WOMAN'S WORK

Dr. Anna Howard Shaw's resignation of the presidency of the National American Woman Suffrage Association will broaden rather than decrease her activities. She is planning an extensive lecture tour in the interests of suffrage

Paul Thompson

LORD MAYOR OF LONDON

His accession to office has just been celebrated—tho the ceremonies were less brilliant than in times of peace

A Project in Nicaragua It is asserted by the press in Nicaragua that Canadian capitalists (or an association of them whose headquarters are in Winnipeg) are negotiating with Nicaragua's Government for permission to build a railroad in that country, from the Atlantic to the Pacific. A representative of these capitalists has recently returned from Managua, where he submitted the project to the consideration of President Diaz. A newspaper published at Bluefields appears to expect that the road will be built, and it points out how beneficial will be the effect upon fruit growers and other agriculturists. It is understood, however, that Nicaragua's Government is not inclined to grant the desired permission, altho it may do this if our Senate, at the approaching session of Congress, fails to ratify the pending treaty. It will be recalled that this treaty, in return for the payment of $3,000,000, gives to the United States an exclusive right to construct an interoceanic canal on the Nicaragua route, a naval station in the Gulf of Fonseca, and three small islands near the coast. For some time Nicaragua has been in need of money, and her financial condition has by no means improved since the beginning of the great war.

The Panama Canal may remain closed for several months. General Goethals is striving to open a temporary channel for the passage of a few ships, but it is expected that even such a channel will be open for only a short time. At the request of President Wilson, the National Academy of Sciences has appointed a committee of twelve men to make an investigation and a report about the slides. The chairman of this commission is President Van Hise, of the University of Wisconsin.

Working for Peace Public attention has been drawn to an interesting attempt by Henry Ford, the manufacturer of automobiles, to end the war. Mr. Ford, who says he is willing to spend all of his large fortune in this work, has chartered a steamship, the "Oscar II," of the Scandinavian Line, which will sail from New York on December 4, and has invited many prominent persons to go to Europe as

THE LARGEST STEEL ARCH IN THE WORLD

Hell Gate Bridge, connecting Long Island and New York, will permit express trains from New England to go thru to the West and South and furnish a direct road for much of the freight that must now go by way of Manhattan

his guests, there to take part in a movement for peace. The peace party on the ship will go from Christiania to Stockholm, thence to Copenhagen, and finally to The Hague. It is expected that influential advocates of peace will join the American party in Europe. At The Hague there are to be conferences, which, Mr. Ford says, will frame terms of peace, and he hopes to get the soldiers "out of the trenches before Christmas."

Among those who have accepted his invitation are Miss Jane Addams, ex-Congressman Richard Bartholdt, Immigration Commissioner Frederick C. Howe, Mrs. Howe, Dean Marquis of St. Paul's Cathedral in Detroit, the Rev. Washington Gladden, Helen Keller, Mrs. Anna Garland Spencer, Mrs. Alice Park, Judge Ben B. Lindsey and Senator Helen Ring Robinson. All the Governors were asked to go, but declinations from a majority of them have been received. Mr. Edison declined. Mr. Bryan's decision has not yet been announced. Mr. Ford thinks that John Wanamaker will accept. Mrs. Ford has given several thousand dollars to pay for a great number of telegrams sent here in the interest of peace. Thousands have been received by President Wilson.

Defense and New Taxes Mr. McAdoo, Secretary of the Treasury, published last week a statement relating to the additional expenditures required by the Administration's new military and naval program, with suggestions as to new taxes. His estimate is that an increase of the War Department appropriation from $114,388,000 to $182,221,000 will be needed for the coming fiscal year, the addition for preparedness being $67,832,000. The appropriation for the Navy Department will rise from $151,109,000 to $219,550,000, and here the sum assigned to preparedness is $49,000,000. But it is not expected that all of the $116,832,000 would be used in the year, the actual expenditures being estimated at $93,800,000.

He suggests that the emergency revenue law, which expires on December 31, be re-enacted, and that the law which provides that sugar shall be free of duty after May 1 next be repealed. This proposed legislation would not increase the present revenue, but would prevent a large reduction of it. The new taxes suggested are as follows: an increase of the income tax rate; an lowering of the exemption limit from $4,000 to $3,000 for married men, and from $3,000 to $2,000 for single men; a beginning of the income surtax at $10,000 or $15,000 instead of $20,000; a tax on gasoline and crude or refined oil; a horse-power tax on automobiles and other internal combustion engines. Such taxes, he remarks, would be widely diffused and scarcely felt. He argues against meeting the additional expenses by an issue of bonds, and would pay even the Panama Canal charges out of current receipts.

There are indications that his tax propositions will not have the united support of his party in Congress. Several Senators desire an inheritance tax, and one proposes that it shall be 50 per cent on sums exceeding $25,000,000. Mr. Phelan would tax the profits of manufacturers of munitions. Mr. Gore opposes taxes on gasoline and automobiles. He would prefer an increase of the taxes on whisky and beer. The Secretary's statement and figures have been attacked by Senator Smoot, who asserts that the addition required by the defense program will be $300,000,000 instead of $116,832,000. Similar criticism of the statement has been made by Representative Kitchin, the Democratic floor leader in the House, whose disapproval of the defense program is well known. He predicts that more than $300,000,000 additional revenue will be required.

Labor Questions The most persistent and disorderly labor controversy now in progress is the strike of the employees of the street railways radiating from Wilkesbarre, Pennsylvania, which is seriously affecting the industries of the Wyoming Valley. With the help of two companies of the State Constabulary, the railroad company has been running a few cars in the day time, but almost wholly without passengers. Mobs have attacked the cars. An unsuccessful attempt to use arbitration was made. There was a conference last week of company officers and union representatives, but it came to nothing. Jitney busses have been doing well. The branch of the General Electric Company in Pittsfield, Massachusetts, has voluntarily reduced working hours for 4000 men, from ten to nine and one half hours, with no reduction of pay. In Massachusetts, the Supreme Court has decided that a law making a limit of nine hours for workmen at railroad stations is unconstitutional. By a vote of 6396 to 8486, at its annual convention, the Federation of Labor has exprest its disapproval of legislative methods to secure a universal eight-hour law. The majority preferred "economic pressure."

Agents from England are seeking workmen here for munitions and arms factories. They offer $21 a week for at least a year, with transportation expenses. A dynamite bomb was found last week, a few feet from the residence of John D. Archbold, president of the Standard Oil Company, in Tarrytown, New York, and lying in a rut where it would be exploded by his automobile. Fortunately for him, on that day he came to New York on his yacht. Some think the bomb was placed by persons interested in the recent strike at the refineries in Bayonne, or that it was related in some way to the execution (on the day preceding the discovery of it) of Joseph Hillstrom, the I. W. W. agitator, in Utah.

The War Supply Business Several new orders for war supplies were placed last week. Great Britain closed a contract with the Western Electric and American Steel Foundries companies for 1,000,000 shrapnel shells, at a cost of $16,000,000, and the Aetna Explosives Company took an order (about $8,000,000) for 10,000,000 pounds of smokeless powder. France has bought 5000 tons of structural steel for portable bridges. Several thousand tons of round steel bars, used in making projectiles, were purchased by foreign agents. France is negotiating for $9,000,000 rifle cartridges. The Midvale Munitions Company, of Pennsylvania, has bought four square miles of land in New Jersey, intending to erect factories

and to make a village there. Great lumber mills at Bristol, Tennessee, are running night and day on British orders for gunstocks, and the demand has raised the price of walnut timber. The Du Pont Powder Company has declared an extra dividend of 28½ per cent. about $17,000,000, on its common stock. It is proposed in Canada, where 250 companies or firms are at work on $500,000,000 worth of orders, to organize the business with the assistance of a syndicate of banks.

It was shown some time ago, by the publication of letters written by Dr. Albert, an agent here of the German Government, and by other persons, that about $1,000,000 had been invested by representatives of German interests in the plant of a projectile manufacturing company at Bridgeport, Connecticut. Additional buildings have since been erected, and the Bridgeport Projectile Company has been incorporated. High wages were offered to skilled workmen, a considerable number of whom were thus drawn from other mills in the same city. One of the company's officers said, two weeks ago, that the company was making shells for Germany, altho he did not show how they were to be delivered. It is more than a little difficult to see how there can be any expectation on the part of those controlling the factory that its product will really get into Germany.

It is now asserted that the owners are negotiating for a sale of the plant to men who will manufacture munitions for the Allies. A suit now in the courts shows that the company, or German interests associated with it, tied up by contracts, which are not being carried out, the largest American factory for the production of presses and other machinery used in making shrapnel, the restrictions which were imposed in the contracts preventing the sale of such presses to other buyers before the beginning of next year.

The Situation in Mexico

Villa has been defeated in two battles, but his army has not been put out of the field. Near Hermosillo he was beaten last week by General Dieguez. Having lost 800 men he retreated to Nogales, on the Arizona border. There he issued a proclamation denouncing our Government and calling President Wilson an "Evangelistic professor of philosophy." A part of his army which had been at Cananea was forced to leave that place by General Obregon, Carranza's chief commander. These men, except 300 who surrendered, also went to Nogales. They were pursued by Obregon, and Villa withdrew to the hills, where he proposes to carry on guerrilla warfare.

While Villa was in Nogales, two of his Generals grossly insulted the American consul. Fifty-eight of Villa's soldiers crost the boundary line and attacked a group of American soldiers who were on patrol duty, wounding eight and killing one. By the return fire about twenty of the Mexicans were killed. When Carranza's men came in they also fired upon our soldiers, but Obregon afterward asserted that they had been misled and did not know that they were attacking Americans. On the west coast, at and near Topolobampo, Americans have suffered from lawless attacks by Indians and Villa soldiers. Our Government has sent three warships to protect them.

It is reported that, owing to the capture of letters and documents by Carranza, it is known at Washington that the Huerta movement was supported by German money, of which there was $10,000,000 at the ex-President's disposal. There was involved in this project Franz Rintelen, who left this country on a fraudulent passport after Huerta's arrest, but was intercepted, and is held, by the English authorities.

JOHN BULL: "I NEVER THOUGHT I'D HAVE TO CHANGE THAT"

MUST ENGLAND RESORT TO CONSCRIPTION?

A NAVY PREPARED AND EFFICIENT

BY JOSEPHUS DANIELS

SECRETARY OF THE NAVY

I HAVE recommended to the President, and the recommendations have received his approval, a new plan for the increase of the Navy. The estimates, calling for $217,652,173.32, provide for an increase of nearly $68,000,000 over last year's appropriations. The adoption of a five-year program of new construction will be urged. Heretofore the policy has been for a Secretary of the Navy to propose a program for a single year, but experts, in and out of the Navy, feel that the five-year program will give us a better proportioned Navy than if it should be authorized piece-meal, year by year.

Those who have studied this program have observed that it provides for fighting craft and reserves of ammunition. Only the peace essentials in auxiliaries are included. But we all know that in war proper auxiliaries are a prime essential. Most of these are procured by purchase, as we did in the Spanish-American war, or by commandeering merchant ships, as European countries have done in this war. This means that we must have an adequate merchant marine.

The amount for construction, under the recommendations for the next fiscal year, is $95,372,127, of which $57,003,000 is for new construction. About $28,000,000 will be required for continuing the program of new construction authorized by the Sixty-third Congress; $8,000,000 will be needed for increase in munition reserve, and $2,000,000 for aviation.

The General Board recommends a larger dreadnought. If the increased size is built, each new battleship will cost, including armor and armament, $18,800,000. A portion of this increase may also be attributed to the greater cost of materials. It may be that these prices will be reduced. If so, Congress will not have to appropriate so much.

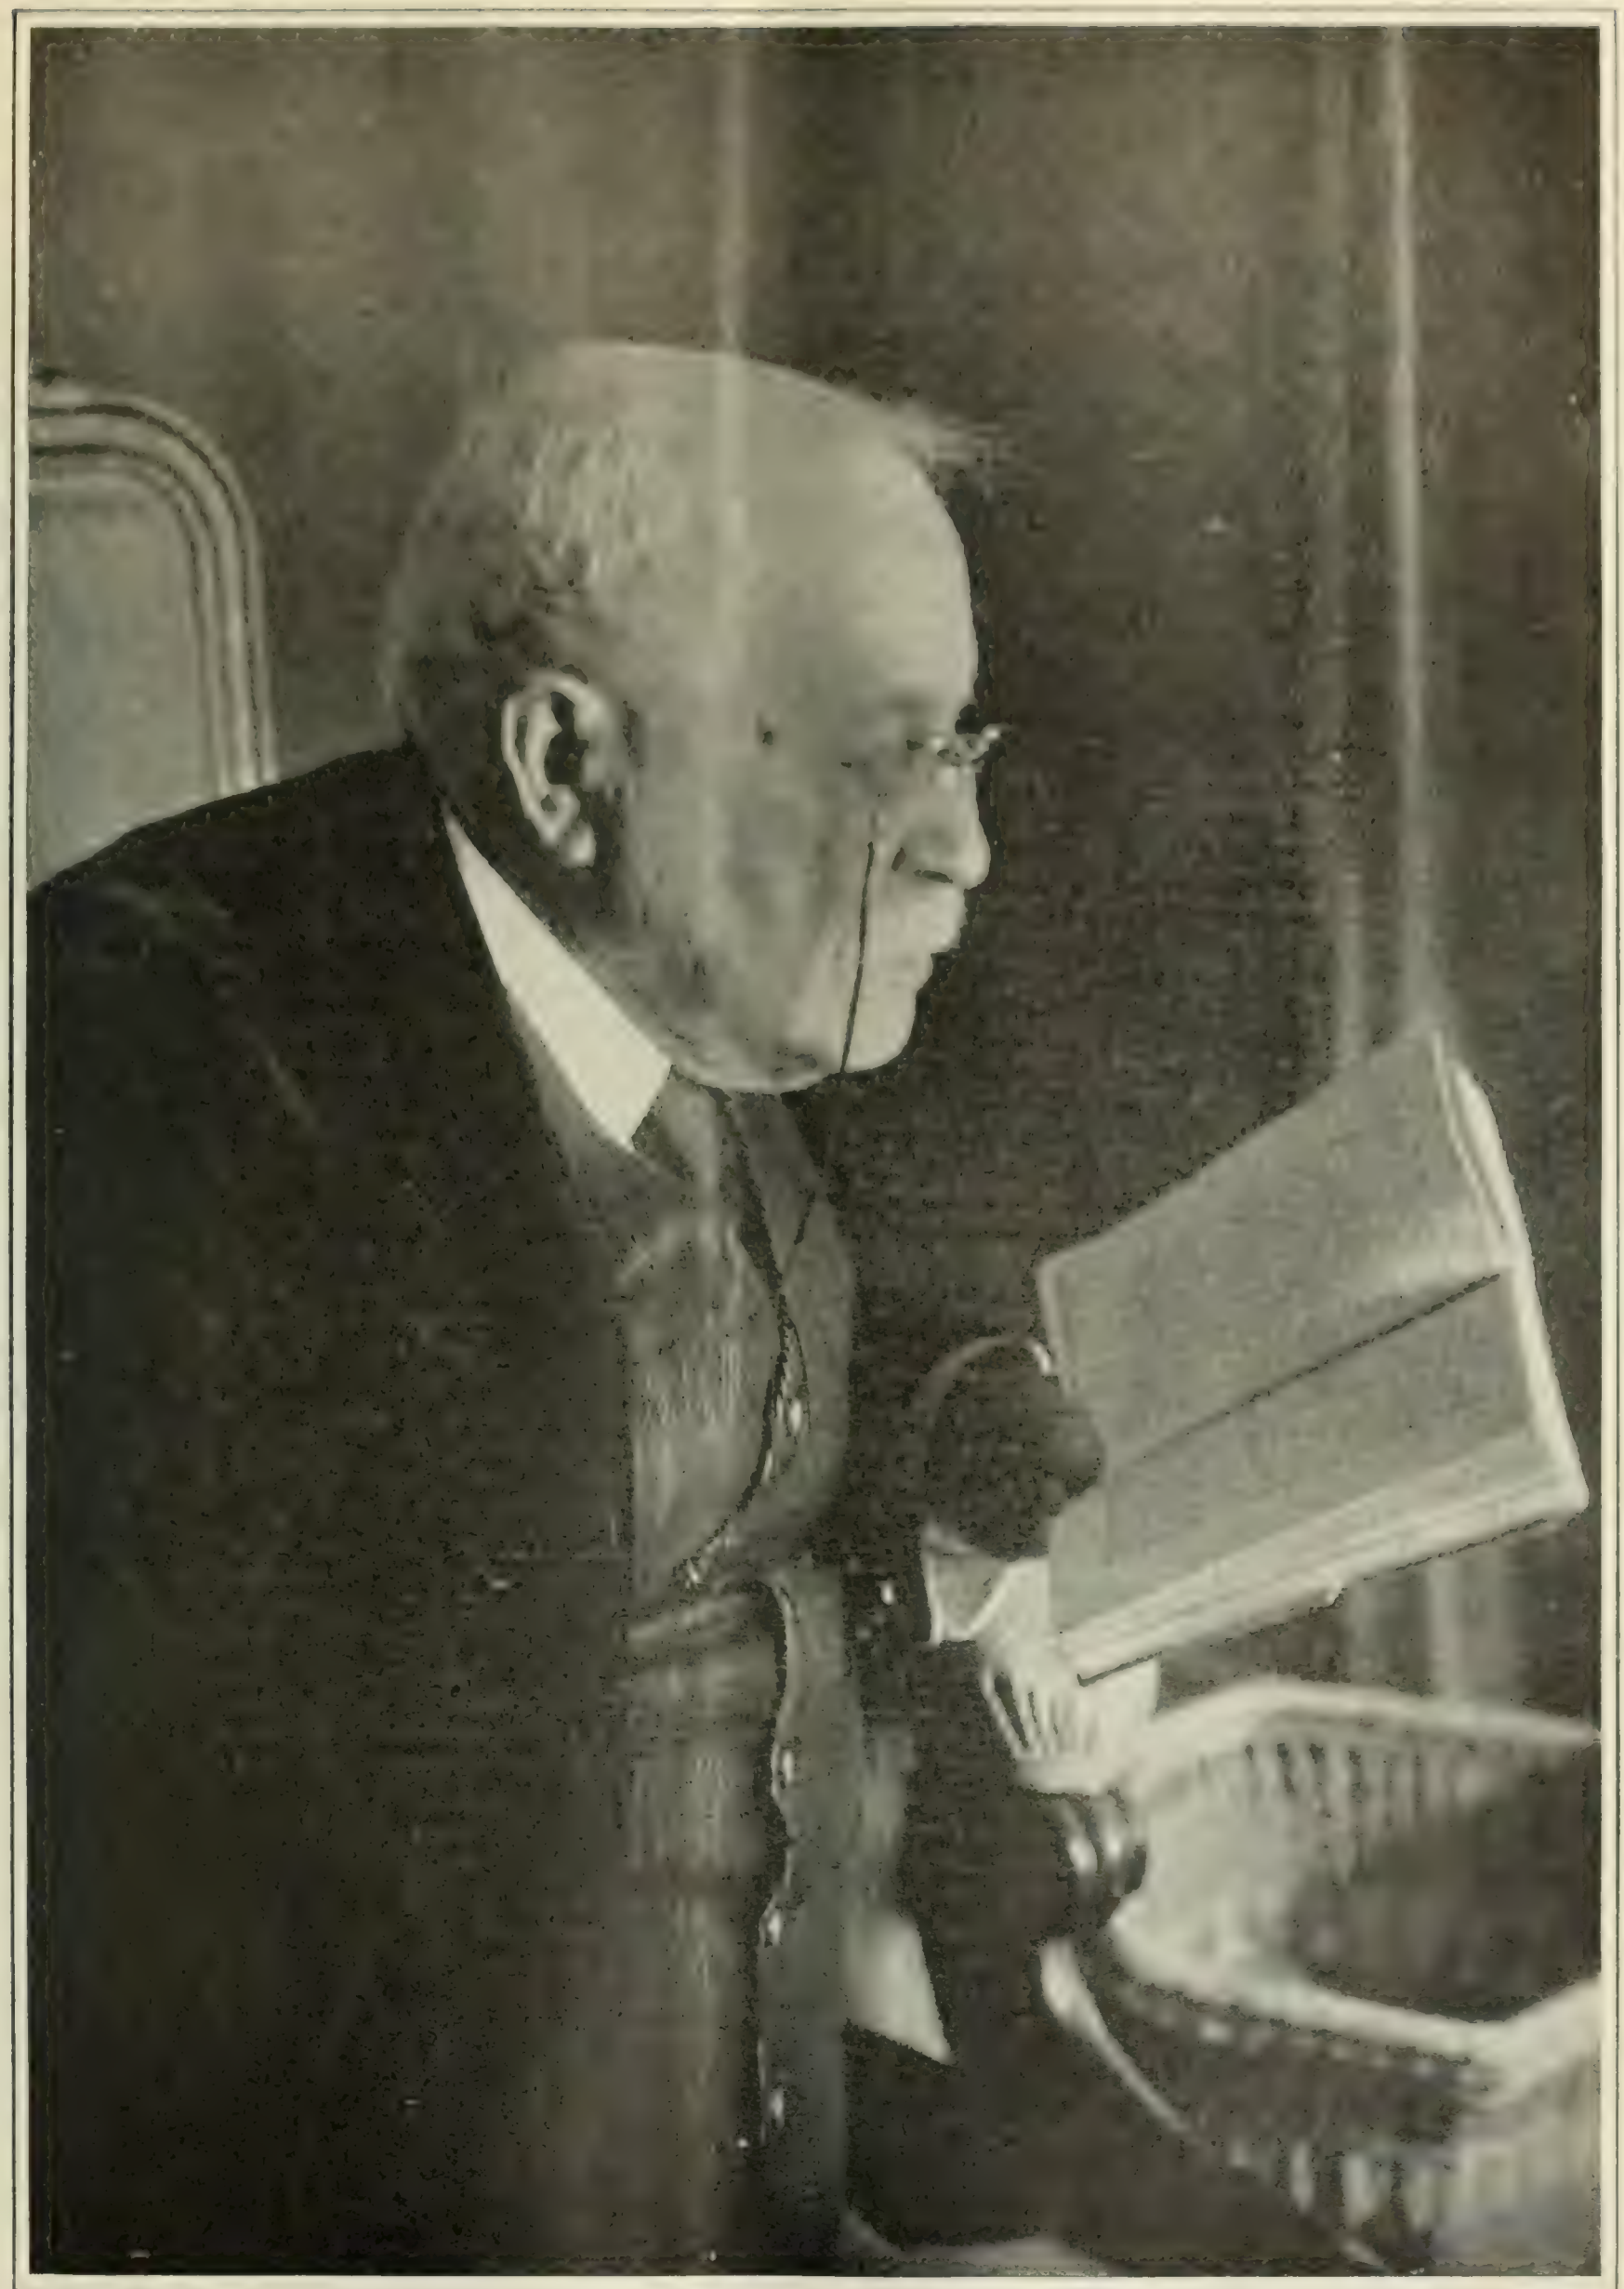
It may have been observed that the Navy Department is steadily increasing its policy of fitting navy yards to build ships and making government plants ready to manufacture large quantities of the munitions of war. For the first time in our history an award has been made to build three submarines in navy yards and destroyers in other yards. It is my purpose to fit every navy yard to construct naval craft. For this I have two reasons. One is that the government has invested many millions of dollars in these yards and unless this investment is utilized for new construction much of it is wasted. By building ships in these yards we increase the country's capacity for turning out ships. The second reason is that if the government itself is prepared to construct naval craft, private shipbuilding companies desiring contracts must compete with government yards.

Naval yards or establishments, however, must not only be able to build ships, but they should be equipped to manufacture a portion of all munitions of war. Take the manufacture of powder. A few years ago the government paid 80 cents a pound to a private manufacturer for making powder. After an investigation Congress fixed the price at 53 cents. In a short time the Navy will be manufacturing in its own plant at Indian Head all the powder it needs, at a cost of something like 25 cents a pound.

There is another reason why the Navy Department should be able to manufacture munitions of war. Such a policy would prevent effective agitation by those who make a profit by the manufacture of war supplies. The incentive of personal aggrandizement by preparations for war should not be permitted to exist in the United States.

The Navy Department is committed to the policy outlined in the foregoing paragraphs. My recommendations to Congress also include an appropriation to enable the Navy Department to manufacture its own armor plate. In Cleveland's last administration Secretary Herbert recommended the erection of an armor plate factory, but no action was taken. In 1900 the sum of $4,000,000 was appropriated for a "factory for the manufacture of armor," but the naval appropriation act declared that the Secretary of the Navy need not build the factory "provided such contracts (for armor plate) can be made at a price which in his judgment is reasonable and equitable." No factory was built. The price of armor plate in 1906 was $346 per ton. It jumped in 1907 to $420 per ton and the last competitive contract included the non-competitive prices of $425 to $486 per ton. If the factory had been built in 1907, as Congress authorized, the government would have saved enough on armor plate to pay for the plant many times over.

Another important need is for a projectile factory. Experience in Europe teaches that the Navy should not longer rely upon private manufacturers for projectiles. We are now, for the first time, manufacturing three-inch and six-inch shells in three navy yards, and if Congress approves we will erect a large factory which will turn out a large product of fourteen-inch armor-piercing shells, as well as the smaller projectiles.



In order to provide a sufficient number of men to man the large number of ships which will be commissioned in the near future, I have recommended an increase of 7500 sailors, 2500 apprentice seamen, and 1500 marines, or 11,500 men in all. This number, it is estimated, will enable us to keep in full commission all battleships under fifteen years of age, all destroyers and submarines under twelve years of age, one-half the number of cruisers, all the gunboats, and the necessary auxiliaries for the fleet, as well as to provide adequate reserve complements for the remaining vessels of military value and for the shore stations. All of this accords with the recommendations of the General Board.

The great majority of enlisted men must, as apprentice seamen, pass thru the naval training stations, where they are taught the rudiments of education and undergo preliminary training, lasting from four to six months, to prepare them for duties aboard ship. It has become necessary, therefore, to increase the number of apprentice seamen.

There should be also an increase in the number of line officers to officer the ships soon to be commissioned, but as the Naval Academy is the only source of supply the increase recommended is in the midshipmen. Recommendations will be made to increase their number at the Academy by not less than 250.

The European war has shown the necessity for a skilled flying corps, whose members need not be experienced naval officers or educated as such, in view of which a special flying corps, to which expert civilian flyers may be appointed, has been recommended for the naval organization. This would establish a field for service for the increasing number of competent aviators willing to join such an arm of the service who cannot and could not hope, under prevailing conditions, to do so unless they either enlisted in the Navy or graduated from the Naval Academy.

THE DEAN OF AMERICAN LETTERS

IN RECOGNITION OF HIS WORK AS A NOVELIST THE NATIONAL INSTITUTE OF ARTS AND LETTERS HAS AWARDED TO WILLIAM DEAN HOWELLS THE GOLD MEDAL, WHICH IS ITS HIGHEST TRIBUTE TO ATTAINMENT IN ANY OF THE ARTS

THE ISOLATION OF THE PRESIDENT

BY OSWALD GARRISON VILLARD

Mr. Villard, the grandson of William Lloyd Garrison, is one of the editors of the "New York Evening Post." Since the war broke out he has spent a great deal of his time in Washington. There has probably been no journalist in closer touch with the White House than he.—THE EDITOR.

THE personal relation of our President toward the public becomes more and more difficult as time passes and the work of the position expands by reason of the growth of the greatest office in the world. Even in Grover Cleveland's time the pressure of visitors and of correspondence was slight as compared with that of today, when it has become a serious question how a President can receive the visitors he ought to, answer that part of his mail which requires personal acknowledgment, and still find time to peruse the mass of printed and typewritten matter laid before him for information or for action. Senators, Congressmen, Cabinet members, diplomats must be seen, and newspaper men also. Distinguished visitors from other sections and other countries deem it almost their right to be received.

Never again can Presidents be as accessible as were Presidents Cleveland and Harrison. Paul Lindau, the German novelist, tells how he was one day casually asked in Washington by a friend of Mr. Cleveland's if he would like to see the President. Eagerly accepting the invitation, he inquired whether he should not put on the dress-suit of European officialdom or the frock coat of American statesmanship. Being assured that this was not necessary, they walked to the White House, passing a single languid policeman, to be asked in at once to the secretary's office. "You wish to see the President? Walk right upstairs, please. You'll find him in his study." In the next minute they were in the presence of the ruler of the freest of nations. Lindau, who had seen the ceremonial of all the courts of Europe, declared that nothing in his life had impressed him like this simplicity and openness, the absence of guards and chamberlains, aides-de-camp and flunkies. Those were surely the "good old days," when it was easy for the centenarian from Thatcher's Run, Chenango County, who had "shaken the hand of every President since Jefferson, sir," to add still another White House memory to his collection. Had there been sightseers' cars in those days, the President would probably have obliged by appearing at the front door at 10.06 every morning.

Indubitably Mr. Roosevelt was the most skilled President in the technique of his office, in that he could do with relatively little sleep, dispatch business with extraordinary speed, and read with amazing rapidity.

With Mr. Wilson the situation has been quite different. As Governor of New Jersey, like Governor Hughes in New York, he governed in the open. The door of his large office stood ajar; any one had access to him and any one could see how the business of state was being carried on. In Washington the situation speedily changed; Mr. Wilson for one reason or another, either desired to alter this policy or found that he was compelled to, by the pressure of the situation. On top of everything came two long summers with Congress on his hands, during which much legislation of a highly important character was past by Congress, a good deal of it under pressure from the White House.

Then there came his great personal bereavement, so that during the first eight months of 1915 the President drew more and more into his shell, secluding himself to such an extent that on the occasion of his second visit to Cornish no one but the members of his family and immediate entourage crost his threshold for a period of twenty-five days, a happening that one must go far back in the Presidency to parallel. It is an open secret that Mr. Wilson welcomed this seclusion not only for the rest that it gave him, but for the opportunity to exercise and to motor, to reflect quietly, to dispose of much reading of documents, and to prime himself upon many questions besides the then pressing German issues. He was, of course, in touch with the White House at all hours by telephone and telegraph, while the mail-bags were heavy; but the happening appears the more remarkable when it is remembered that this took place in the middle of an international crisis of an importance only equaled a few times in our history.

Now, one result of the President's growing isolation has been that his administration has suffered by reason of the fact that his subordinates in his own government have not been in close touch with him and have lacked that inspiration which inevitably comes when subordinates are brought into contact with the personality at the head, particularly when the personality is a Woodrow Wilson, one of the most entertaining and charming of men, who can fascinate or inspire whenever he chooses to make the effort. Looked at merely from the point of view of administrative efficiency, or of party loyalty, or of enthusing the youngest men to the future carrying on of the political principles for which Mr. Wilson stands, his isolation, however readily the reasons for it are understood, has done harm. Probably the President himself does not realize this—I am told by one who was his friend at Princeton and one of his best professors, that Mr. Wilson showed the same tendency there to leave his teachers to themselves so far as their work went. Altho he was a good football coach in his time, he forgets now that a hearty slap on the back, a generous interest in what the other players are doing, helps to make a good team, whether on the football field, or when the game is the administration of the nation's affairs.

It is current gossip in Washington that the President has never talked to the members of the Federal Reserve Board and has only met them officially at one of the deadly White House receptions. The wife of one of the most important officials in Washington, who is today doing a singularly important piece of work for the Government, said to me: "The President is a great figure, but not a personality to us, because we never see him; we only met him once at a reception." Upon Congressmen this failure to get in personal touch with the President bears particularly heavily. They are ambassadors from their communities to the seat of government, and their clients picture them as in touch with the inmost secrets of the White House. One Middle Western Congressman, quite an important figure in the House, went to a fellow Representative who was supposed to have the President's ear and begged for his aid in getting an interview. "In the two years the President has been here I have never met him," he said. "Every time I go home the folks ask me what the President thinks about this or that. I have to lie and tell them what I think he is thinking or I'd lose my job. Now, I am going home for a long stay, and for the sake of my eternal soul I want to be able to say truthfully when I get home this time 'Oh, I saw the President the

other day and he said to me, "By the way, Smith, what do you think of our foreign affairs?" ' "

It is not surprizing, therefore, that the news of the President's engagement to Mrs. Galt has caused heartfelt rejoicing in and about the White House. Among the party leaders the coming marriage is looked forward to as certain to help President and party. Mrs. Galt, with her personal charm and friendliness, is counted upon to open up the White House, to entertain freely, and to let many people know just how winning the President really is. The first step toward the new policy is the abandonment of Cornish as a summer home and the taking of the late John A. McCall's house on the Jersey shore for a summer headquarters—a very necessary step for the convention year, since Cornish is as inaccessible as it is attractive, and quite unable to cope with visiting delegations of any size.

New York City

THE GARY PLAN IN NEW YORK

BY SYDNEY REID

GARY schools are work-study-and-play schools. They take their name from Gary, Indiana, a city of about 50,000 inhabitants, where William Wirt, superintendent of public schools, has made a successful trial of the plan for fifteen years.

Mr. Wirt looks upon work and play as educational and almost of equal value with study. The school day is extended under the Gary plan. Sometimes it is as long as seven hours. But time of teachers is not extended save that they do their correcting of papers and study planning in school instead of at home.

In New York City, where the Gary plan has an added advantage, since it instantly abolishes part time, the board of estimate has appropriated $620,000 to extend the system to twelve public schools of the Bronx. It has already proved successful in the two overcrowded schools, Public School No. 45, Bronx, and Public School No. 89, Flatbush, last year. These schools are split into duplicate schools called X and Y. All school facilities — including classrooms, playgrounds, workshops, school gardens, auditoriums, playrooms and gymnasiums — are used all the time during school hours. Special teachers also are employed all day, one class succeeding another at fifty-minute intervals. All the grades above 5B are run on the departmental plan—that is, a stationary teacher with constantly succeeding classes. While the children of X school are at the three R's in classrooms, the children of Y school are in workshops, auditoriums, school gardens, gymnasiums and playgrounds. By this means schools formerly overcrowded have an abundance of room.

Under the Gary program pupils are in school 1800 minutes per week instead of 1275, the New York minimum. Of this 1800 minutes 1050 are devoted to the academic studies, 500 to work, and 250 to activities in the auditorium. In recent regents' examinations pupils of Gary schools have more than held their own in comparison with pupils from other schools.

Mr. Wirt declares that if given a free hand with New York schools he could accommodate all the children in two-thirds or three-quarters of the present buildings, rejecting the unfit schoolhouses. What would be needed in order to make the change would be more workshops and more play facilities. The industrial and pre-vocational teaching is broad, including designing, millinery, dressmaking and domestic science for the girls; cabinet making, pottery, blacksmithing, printing and gardening for the boys. The troublesome religious instruction problem is disposed of in the Gary schools by allowing the children fifty minutes during each day in which they can go to whatever religious instructor suits their parents. These instructors have no connection with the schools.

Paul Thompson

MAKING POTTERY IS PART OF THE SCHOOL WORK

Mayor Mitchel and Comptroller Prendergast have become converted to the Gary plan, and principals at whose schools it has been tried out are enthusiastic in its favor. The outlook is that it will be extended to cover the entire New York school system. It has been in successful operation in Swarthmore and Sewickley, Pennsylvania; Troy, New York; Winnetka, Illinois; Kalamazoo, Michigan, and Passaic, New Jersey. Within a year it has spread to hundreds of towns.

RUPERT BROOKE

BY LLOYD R. MORRIS

OF all the verse that in England has been inspired by the Great War. one sonnet sequence will live as the perfect expression of the soul of a nation awakened to self-consciousness in the hour of its trial. The five sonnets of which it is composed were the work of one of the younger generation of poets, a man of great personal beauty, a lover of life, whose work, until the outbreak of the war, was pregnant with promise that had not quite attained fulfilment. At the outbreak of the war Rupert Brooke joined the force that was sent to relieve the beleaguered city of Antwerp; he participated in the siege and in the subsequent retreat, returned to England to join a training camp, and in February of this year sailed with the British Expeditionary Force bound for the Dardanelles. He never reached there, however, for he died and was buried on the island of Lemnos, in the Aegean, on the twenty-third of April.

His work, until August of last year, had been sensuous and passionate, but not always simple. His view of life had in it that epicureanism which we find in Horace and in the Elizabethans, but it was an epicureanism troubled by the indecision of youth, and by the intensity of spirit and of passion, of intellect and of emotion, that were continually at warfare within him. He loved the beautiful things in life, the experience of youth, and nature in her infinite variety, and:

". . . White plates and cups, clean-gleaming,
Ringed with blue lines; and feathery, faery dust;
Wet roofs beneath the lamp-light; the strong crust
Of friendly bread; and many-tasting food;
Rainbows; and the blue bitter smoke of wood;
And radiant raindrops couching in cool flowers;
And flowers themselves that sway thru sunny hours,
Dreaming of moths that drink them under the moon"—

and his earlier verse reflects this prodigality of the things of sense that he experienced in the life around him. He was fascinated by the concrete, and in his verse dwelled for a time only upon those things that are either beautiful or hideous to see and hear, to taste, to smell, or to feel, and in the expression of such things he attained a rare degree of mastery in the manipulation of beautiful and vigorous language. He was too athletic both physically and spiritually, too much a lithe young animal in his joy for life, to be a decadent, and altho he described with loathsome accuracy the experience of sea-sickness in crossing the Channel, and the brutal sensuality evoked in the vulgar soul by music, he did so only because he loved all life indiscriminately, and felt that in its expression both the beautiful and the hideous must have a part. But chiefly two experiences drew him most, that of love, and that of nature, and of these he sang with subtle charm. In his love of both there is present that platonic progression from the purely sensuous to the spiritual, the flood of emotion finding its resolution in a quietude of soul that he himself did not trouble to analyze. His love of women was, perhaps, rather a love of woman, a love at first wholly sensual, rising beyond the vesture of the body to the experience of spirit that was felt rather than understood. The experience of nature was, for him, much the same, and this he has exprest with perfect beauty in the following stanzas, "Blue Evening":

"My restless blood lies now a-quiver.
Knowing that always, exquisitely,
This April twilight on the river
Stirs anguish in the heart of me.

For the fast world in that rare glimmer
Puts on the witchery of a dream.
The straight grey buildings, ruddy dimmer,
The fiery windows, and the stream

With willows leaning quietly over
The still ecstatic fading skies
And all these like a waiting lover,
Murmur and gleam, lift lustrous eyes,

Drift close to me, and sideways bending
Whisper delicious words.
But I
Stretch terrible hands, uncomprehending,
Shaken with love; and laugh; and cry."

Above all else, he hated time and the forces of change which rob the body of its beauty, and many of his poems express the merciless horror of decay, the thought of which insidiously mars even the most perfect beauty. What wonder, then, that in his earlier verse the feeling is that of "carpe diem," love of beauty during its brief life, with no thought for thought? For of thought he was, at first, afraid; life seemed too full, in its little moment, to lose aught by thinking, or by questioning the relative values of its significance.

But this was but a passing phase. Unconsciously, perhaps, he was a platonist, believing that sensuous beauty is the index of something nobler, and that the resolution of all great emotion is in the spirit. There are poems in which he has exprest the desire for escape from life, for retreat, and quiet, and the opportunity to see life intellectually. And it is in these poems that he was preoccupied with death, not as the destroyer of beauty, but as the release of the spirit into a life all its own. He had not found himself, and he knew it, and in his verse there were indications of another and more serious mood, less troubled, less complex, and richer in its philosophy, when the war beat down upon the world, and engulfed all of Europe. And in those early days of horror, such days as "try men's souls," he matured in spirit, found himself, and in his verse exprest the calm, clear spirit with which the English have traditionally accepted the inevitable. He went forth with a premonition of his own death, as many a soldier has gone, resigned, alert, keen for his duty to the tradition and the countryside that he had loved so passionately. He was, as he has written in the sonnet entitled "Peace," thankful for the great hour that awakened him from sleeping, and "all the little emptiness of love" and that sent him forth with

". . . hand made sure, clear eye, and sharpened power,
To turn, as swimmers into cleanness leaping,
Glad from a world grown old and cold and weary."

But the sonnet by which he will always be known is "The Soldier," a poem that in the simplicity of its beauty seems rather of the England of Elizabeth than of today, but that in its essential spirit expresses the soul of England as it has been since, when it was threatened by the Armada, the consciousness of nationality first crystallized:

"If I should die, think only this of me:
That there's some corner of a foreign field
That is forever England. There shall be
In that rich earth a richer dust concealed;
A dust whom England bore, shaped, made aware,
Gave, once, her flowers to love, her ways to roam,
A body of England's breathing English air,
Washed by the rivers, blest by suns of home.

And think, this heart, all evil shed away,
A pulse in the eternal mind, no less
Gives somewhere back the thoughts by England given;
Her sights and sounds; dreams happy as her day;
And laughter, learnt of friends; and gentleness,
In hearts at peace, under an English heaven."

New York City

WHAT NATIONALITY ARE SALOON-KEEPERS

BY DAVID STARR JORDAN

CHANCELLOR OF STANFORD UNIVERSITY AND CHIEF DIRECTOR OF THE WORLD PEACE FOUNDATION

THE seaboard cities of the United States are especially cosmopolitan, and for that reason especially difficult to govern thru the machinery of American democracy. These difficulties cluster about the prevalence of lawlessness on the one hand and of corruption on the other. The centers of both these evils are found in the saloons, which in turn constitute the open door to the sources of the "Red Plagues."

The following statistics in regard to the saloon business of San Francisco are submitted for whatever they may be worth. Perhaps they illustrate the claim of Professor Münsterberg that work against intemperance was started "as a result of German influence."

San Francisco is a seaboard city with a population of about 450,000 (exclusive of suburbs), 416,912 in 1910. It contains 2100 licensed saloons. Of these, 1161 are listed in the telephone directory of San Francisco. About one-third of these bear noncommittal names, such as "Magnolia Bar," "Live and Let Live," "Fair Wind Saloon," which give no clue as to the nationality of the proprietor. The others may be classified as to nationality of the name of the proprietor as follows:

German	257
Irish	163
British (English and Scotch names)	162
Italian	76
French	36
Scandinavian	31
Slavic (Russian, Serbian, Hungarian)	13
Chinese	9
Dutch	8
Portuguese	6
Spanish	5
Greek	3
Unclassified	402
Total	1171

Among the names recorded as British there is a certain element of doubt, since English and Irish names are to some extent interchanged. It is also a common practise for Slavs and Portuguese with long or difficult names to adopt an English substitute. I know an Anderson and a Clark who are Portuguese, a Larkin who is Russian, and I know of a Russian named Nelson.

The smaller establishments, not listed on the telephone, are doubtless mainly foreign, that is, not American (British).

It is understood that a large percentage of the saloons are owned by the brewers. The nationality of the brewers of San Francisco as revealed by the telephone directory is as follows:

Unclassified	18
German	11
Irish	1
	30

The wholesale liquor dealers are as follows:

German	42
American (British)	17
Italian	6
Irish	6
French	5
Dutch	1
Chinese	1
Unclassified	8
	86

Draw your own conclusions.

Stanford University, California

THE WORLD OVER

A South American Hobo

Santiago, capital of Chile, is the home of the *roto Chileno*, or broken Chilian, most picturesque and unique of hoboes. The name is a byword in South America, and as far as that continent is concerned he is a unique type. We find rich people everywhere, and poor people everywhere, but in no other South American country but Chile do we find this good-natured, serviceable, deceitful, ragged, drunken, criminal species of tramp. He earns a livelihood by begging, doing odd jobs and thieving; the last is his mainstay; in his hands stealing has become a fine art. The Chileans have a saying that he will steal your socks without touching your boots. A long, jointed wire with a hook at the end is his favorite tool. If a window on the street is left unguarded he will, with this simple contrivance, successfully remove from the interior everything but the heavy furniture.

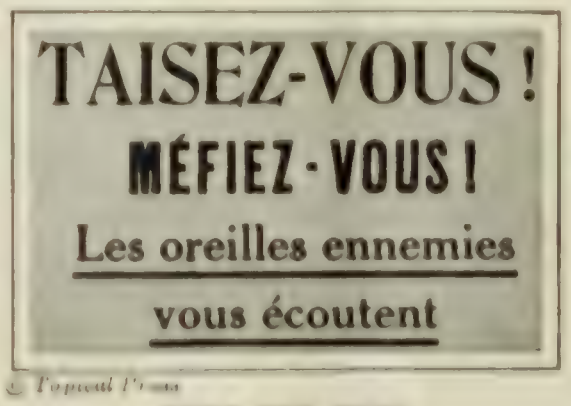
A Society of Star-Gazers

It is not often that you can go out in your own backyard and do research work for which a great university is waiting. But if you have a three-inch telescope, or larger, you can coöperate with volunteer observers scattered over the country and contribute your own share to the astronomical records of the Harvard College Observatory, not to mention helping to solve one of the baffling problems of astronomy.

The American Association of Variable Star Observers is finding out how variable stars behave. It has not very many members, but since it began work in October, 1911, it has made and reported no less than 43,000 observations. Professor E. C. Pickering, director of the Observatory at Cambridge, is glad to receive this free-will offering to his records and has endorsed the Society's activity. He declares that this is the most practical service the amateur astronomer can give.

This is the way of it. On a chart furnished by the observatory and showing the region of the sky that is being studied are a number of comparison stars—constant stars which are ticketed with the degree of brightness which they show, their photometric magnitudes, if you like that better. The observer decides which two of these are nearest in degree of brightness to the variable he is studying—the one brighter, the other fainter—and then estimates from these two just how bright the variable is. After these observations have been made repeatedly a curve is drawn to show the changes in magnitude of the variable. These fluctuations show every conceivable sort of eccentricity and irregularity, so that the study is far from monotonous.

Cooperative observation works beautifully in such a case, for local bad weather affects only a part of the group of students, and others are always at the glass, so that the records are continuous. Once a month they are gathered together and reported in *Popular Astronomy*, by Dr. William Tyler Olcott, leader of the society.



It will take hundreds of thousands of observations to solve the puzzle of the variable stars, and the job of taking them is a bigger and more important one than amateurs can generally engage in with so little difficulty.

A TALENTED TRAMP

Taking No Chances

The French Minister of War has ordered posters to be placed in all the railway carriages, trains and omnibuses warning the people that the enemy does not always fight in the open. "Do not talk, be careful, enemy ears are listening," is the caution he gives to France. It is a rather significant retort to Germany's widespread and efficient system of espionage.

MUMS THE WORD

When Street Meets Street

The Municipal Art Society of New York City believes in killing two birds with one stone. So it encourages architects to turn their attention to the various problems which the growth of a big city creates and then brings the solutions they discover to the municipal authorities.

A Street Crossing Competition—not the ordinary rush hour duel of vehicle and pedestrian in which every New Yorker is more or less adept—but a prize contest for the "best architectural solution of the intersection of an avenue and a street" was one of their latest enterprises.

From the 185 designs submitted a committee of judges, headed by Mr. Goodrich, Consulting Engineer of New York City, chose nine which combined satisfactorily both practical and artistic demands.

The design which was awarded first prize was a tunnel construction. It caused the least possible damage to surrounding real estate, merely cutting off the four corners of nearby buildings and in return leaving free a plot in the middle which the city could either use or turn into cash.

The success of this competition in arousing keen interest in a pressing problem makes it probable that the Society will each year hereafter hold similar prize competitions.

Charity Permanent Yet Flexible

Those who desire to make gifts of a charitable character, or to leave money in trust for charitable uses, but are in doubt as to the method by which their purpose can best be accomplished, should be informed concerning a plan devised by the Boston Safe Deposit and Trust Company, an excellent institution of its kind, which has been in business forty years and holds in trust or as executor about $27,000,000. The company has established a Permanent Charity Fund, which must commend itself to those who feel that if they leave money for a definite charitable purpose, the changing conditions of a future that cannot be foreseen may lessen the usefulness of the gift, or that if they leave it to a charitable institution, the condition of that institution may suffer in the course of time by reason of unwise or incompetent management.

In this Permanent Charity Fund the company agrees to hold forever, in trust, such sums or property as may be given to it, and the income is to be distributed annually for the promotion of such charitable purposes, and the aid of such organizations, as shall be regarded as the most deserving by a committee of seven citizens. The members of this committee are to be men and women well informed concerning the

charitable needs of the community. No one who holds political office or who seeks such office is eligible, and there must be not more than two of the same religious denomination or sect. The members are to be selected as follows: one by the Judge of the Probate Court of Suffolk County, one by the Chief Justice of Boston's Municipal Court, one by the local judge of the United States District Court, one by the Attorney General of Massachusetts, and three by the company.

Gifts will be accepted from donors who name some particular purpose to be promoted or some particular charitable organization to be assisted, but with an understanding that a change will be made whenever, in the opinion of five-sevenths of the committee, new conditions make such a use of the income no longer truly in accord with the donor's wishes, or unwise or impracticable. Thus the flexibility of the fund will be preserved, and it will keep pace with progressing and changing needs. The company will also accept gifts from those who desire to provide annuities from the income and to have it devoted to charity after the termination of the annuities, when the income will be subject to the rules governing distribution of the Fund's income.

Janet M. Cummings

OFF TO THE WAR

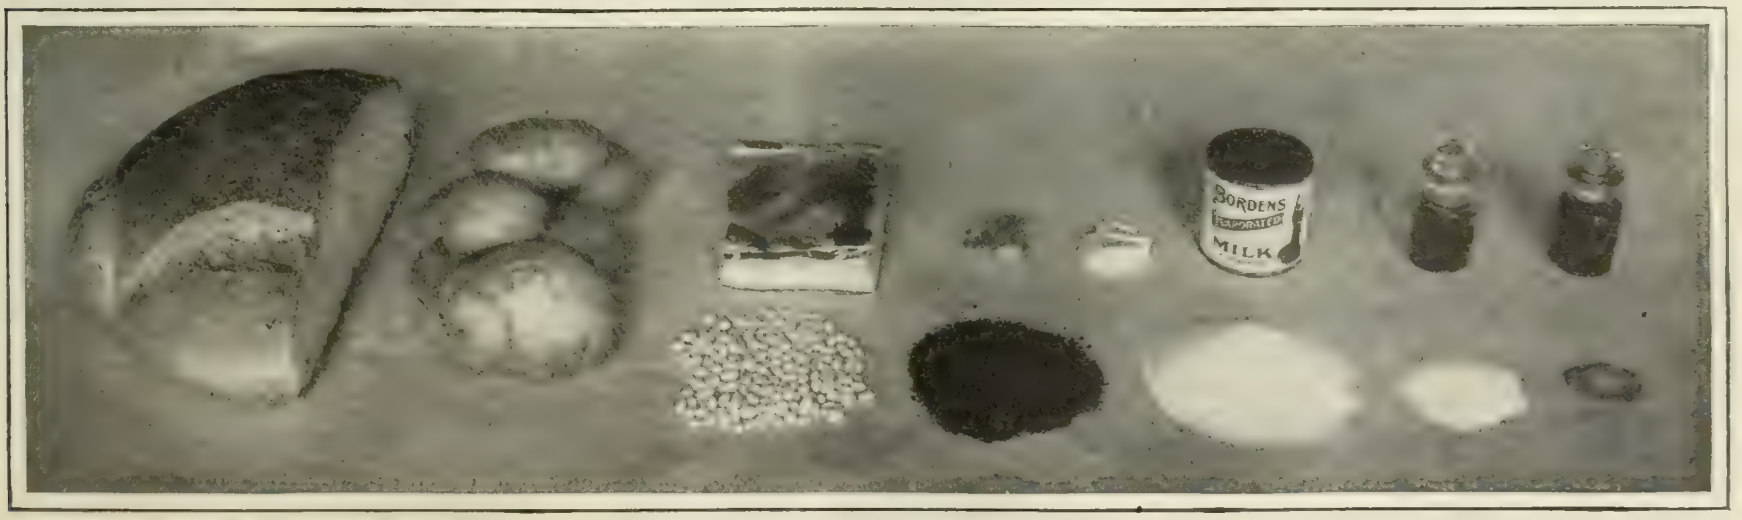
Dogs of War

One hundred and six dogs, famous thruout Alaska for their prowess in the races, were recently purchased in Nome, Alaska, by Lieutenant Rene Haas of the French Army for service at the front in Alsace. The Alaska dog has long been recognized as a superior draught animal. Dogs from Alaska were used by Stefansson and by Captain Amundsen in their expeditions.

The line of dogs were driven thru Nome by Lieutenant Haas, assisted by Alex "Scotty" Allen, thrice winner of the world-famous "all Alaska sweepstakes," the 400-mile "dog derby" of the North. The dogs are now being transported by steamer from Nome to Seattle, Washington, thence they will go to Quebec, Canada, from which point they again take steamer for France. This line of dogs constitutes the largest team of dogs ever driven in the North.

Pulverizing Metal by Light

That the ultraviolet ray acts curiously on metals, causing them under certain circumstances to throw off clouds of tiny particles, was discovered some years ago by Lenard and Wolf. Apparently the ray, by its impact, is able to shatter the surface layer of the metal into fine dust. This fact has been utilized by Svedberg, the Swedish scientist, who has just received the Nobel Prize, in the production of what are known as colloidal solutions—mixtures of solid and liquid not quite as intimate as perfect solutions, and yet more so than when the pulverized matter is simply floating or suspended in the fluid.



The surface of the metal that is to be pulverized must be cleaned of all adherent oxid. It is then placed in a flat vessel containing the solvent and is exposed to radiation from a quartz-glass mercury lamp placed only a few centimeters away. After a few minutes, the liquid, observed with the ultra-microscope, takes on the characteristic aspect of a colloidal solution. The different metals and solvents present very different phenomena. Silver, copper, tin and lead pulverize very rapidly, while platinum, aluminium, and cadmium show little or no pulverization.

Svedberg is now engaged in further investigation which will bring out the importance of the electric charge of the metal to be pulverized and incidentally may perhaps serve to elucidate the mechanism of photographic reactions.

The Soldier's Daily Ration

In one respect at least the preparedness of the United States Army has reached the highest point of efficiency. A scientific dietary, designed to furnish the necessary energy in the most compact and convenient form, has been carefully worked out: bacon, 12 ounces (or fresh meat, 20 ounces); bread, 18 ounces; beans, 2.4 ounces; potatoes, 20 ounces; prunes or preserves, 1.28 ounces; coffee, 1.12 ounces; sugar, 3.2 ounces; evaporated milk, 5 ounces; vinegar, 0.16 gill; salt, 0.64 ounce; pepper (black), 0.04 ounce; lard, 0.64 ounce; butter, 0.5 ounce. Of this ration, just a portion is carried individually by the soldier; the rest, such as butter, lard, pepper, syrup, etc., are given in bulk to the companies and then distributed to the men at mealtime.

In the United States Army the soldiers are furnished distilled water to drink, an ingenious sterilizing and distilling apparatus being mounted on an Army wagon and carried everywhere along with the troop, and supplying sufficient absolutely pure water for every soldier's needs.

FOOD FOR FIGHTING

A STORY OF JAPANESE LOYALTY

MY grand-aunt died on the ninth of July at the age of seventy-five, as a handmaid to one of the former feudal lords (or *daimyo*), whom she served continuously during sixty years, devoting her whole life and sacrificing all her happiness.

A few years after she began to serve as a handmaid, Japan fell into the period of the political disorder and revolution in 1865-7. Her lord took the side of the Shogunate, and, being defeated in the battle, was forced to make an escape for life. She followed the lord and his wife, bearing their baby on her back, as is the custom of Japan. She walked many miles of the country roads with them and cooked the meals for them with the baby still on her back.

After the peace was restored the lord's family was not quite happy. The estate being decreased, his financial condition was not as good as before. Moreover, he had some bad subjects, who robbed him of the greater part of his small estate and made him quite poor, perhaps poorer than a common salaried Government official.

To add to this disaster, his son was not quite wise, being grown up during years of social disorder and family calamity, and his daughter was very weak.

My aunt served her master and mistress during all these miserable years, only getting one dollar a month.

My aunt seemed to think nothing of herself and her happiness. Her thoughts and cares were always directed to her master and his family, and it was really her greatest happiness to make her master's family happy.

She was given only a few days' vacations during the whole year; but she did not like to spend even those days wholly to her own purposes.

About ten years ago, when she was sixty-five years old, her master the lord and his wife died successively, but she continued to serve the heir after that time.

It was the first time in her life that, at this period of time, she was given one month's vacation to visit her sister, i. e., my grandmother, who lived 300 miles away from her. She was so very glad to visit my grandmother (for they did not see each other for fifty years since my grandmother was married) that I thought she would find one month's vacation quite too short. But after the lapse of about ten days with my grandmother, she could no more spend the days for her own pleasure, because she could not help thinking of her master's house, how they are spending these days, or whether they don't feel inconvenient without her, etc. And tho she was very glad to be with my grandmother, her love for her master's house prevailed, and at last she decided to go back after the lapse of two weeks.

Every kind of nice cakes and fruits presented to her by her relatives and friends she did not taste herself first, but gave it to her master and his family first, and if they found them very nice she was exceedingly glad, more glad than when she found them nice herself.

At the death of her old master and mistress she was quite old, her hair became white, and her body was leaning forward. All her relatives advised her to retire and spend her remaining years at leisure, in which case there were many relatives to support her. But she said: "I get up every morning earlier than any other maids, make fires, and work in the kitchen, and sweep the room afterward. I take charge of the household matters, and make every effort to economize the living expenses of the lord.

"I get one dollar (two yen) every month without ever being made any increase during my whole life. I don't believe that today's young girls, who know what is the proper reward for their work and who easily go away if the work or reward is not satisfactory, can do the same work as I am doing now, even tho my body is bending forward, and I can no more do any hard work. If I retire and there comes another maid, I am sure she can do no good to my lord's household."

Thus she worked as faithfully as before, never showing any change of her loyalty and love toward her master's house during these sixty years, till at last she fell sick in the end of June and died a few days later.

To an American eye, or even to a modern Japanese eye, she might seem quite foolish. Her work did not pay at all if the law of labor and wages (*Leistung und Gegenleistung*) were to be applied. But she did not want any reward for her labor. Her whole heart was love, loyalty, devotion and sacrifice to her master. "First seek the kingdom of God and its righteousness, and all these things shall be added unto you." She first sought loyalty to her master's house and did not care about herself, and she could live without any lack or any surplus during her whole life, and died without leaving any penny after her.

I cannot say that every Japanese has the same loyal feeling to his master as my aunt had; no, I rather write to you about her because she is a rare type of loyalty. But I believe the loyalty of every Japanese to the Emperor is at least typified by her case. A Japanese sacrifices his life and everything to the Emperor, not because the Emperor was very kind to him, nor because the law of Japan demands it, but because the Emperor is our divine head and master. To a Japanese, there is no individual life at all when he must sacrifice himself for the cause of the Emperor.

I do not believe that it is always in harmony with the will of God to sacrifice one's self to this master without judging its righteousness or wrongness. If we follow always the will of God we are sure that we must sometimes stand against our master. But there are very few who can follow God with all their heart, and with all their spirit and mind. The majority of people follow God on one side and follow their own selfish desires on the other. They are serving two masters. If we compare those half Christian and half heathen people with these Japanese loyal men who have no individual existence of their own, I find much more loveliness and sincerity in the latter, tho some traces of ignorance are mingled in them.

This is what I felt at the report of my loyal aunt's death.

Nothing is more difficult than to understand the psychology of another race; yet at times nothing is more important. It is very important that we Americans understand how our neighbors on the west think and feel, but this is extraordinarily difficult, because the Japanese have developed their racial character in isolation from the rest of the world and we are ignorant of their language and literature.

There has come to us in the form of a personal letter a human document of the highest value since it reveals to us, as no outsider could, one of the fundamental traits of the Japanese character; that is, loyalty. The writer, a Japanese traveling in this country, evidently remains sufficiently in sympathy with the sentiment to appreciate it, yet he realizes how strange it seems to us. Doubtless loyalty such as this and, from our point of view, so excessive, will die out gradually with the disappearance of the feudal regime which trained it, but the impress upon the Japanese character will continue indefinitely and will be a great source of strength to the nation.—THE EDITOR.

BOOKS FOR CHRISTMAS

A SUGGESTIVE LIST

IT is not by chance that Christmas has come to be the book season *par excellence*. For books make the best of presents for various reasons. They can best convey that sympathy of taste which is the basis of friendship and affection. They are useful, but not too useful; the true present is something we are glad to get but do not have to have. They do not fade like flowers or mortgage room-space like furniture. They are issued in such variety that the danger of duplication is small. They are issued at all prices, so the poorest can afford to buy the best of literature and the richest can find opportunity for the display of his liberality.

When these advantages began to be generally realized there appeared in response to the demand a peculiar type of "gift book," which was made, first; to sell and second, to give away and was not good for anything else. The "gift book," pure and simple, defeated its purpose, for having little or no intrinsic value it became merely a bulky and expensive form of Christmas card, so it has declined in favor in recent years, altho it is not yet altogether extinct. The publishers have found it advisable to bring out at this season not merely their most handsome and expensive, but also their most valuable works, books of history, biography, science and philosophy, as unlike the old-fashioned "gift book" as possible. It would indeed be better for the bookseller, as well as the book reviewer, if the trade were more evenly distributed thruout the year instead of being congested at Christmas; but so long as most people confine their book buying to this season, it is a good thing to have published at one time the best books of all kinds.

But it is most appropriate that a book chosen as a present, however cheap in price, should have a touch of elegance and beauty, sufficient at least to throw it into the class of the luxuries instead of the necessities of every day. So we find the Christmas season brings out especially books on art in all its various phases, as well as volumes of travels, which lend themselves to extra illustration. This, too, is the time when we can renew our acquaintance with the best books of the past or call them to the attention of the rising generation. Reprinted in various attractive forms and illustrated by the newer printing processes, these choice works of the older literature reappear as rightful rivals of the debutantes of the season. Then come, most abundant of all, the books for children and young people, from untearable and uneatable nursery rimes to tales of college life.

Such is the array of books placed before the puzzled purchaser at the holiday season. It is with the hope of assisting him in his selection that the following pages are written. The new books are so numerous that we cannot discuss them at such length as we should like, we cannot even mention all that are sent to us. But we have picked out some of those that seemed to us most worth while and given brief suggestions as to their scope and value, which we hope will be of assistance to our readers. We bid all welcome to our annual booklovers' reception, and now proceed to introduce the lions.

PAINTERS AND ILLUSTRATORS

Curators and dealers shake their heads sadly this year when one penetrates to the sacred corners of library and shop in search of fresh art folios and quartos from France and Germany. The art periodicals of Germany have not stopped publication as have those of France, but the books that have come to us from their presses bear dates a year or more old. From England comes more recent work, mainly that of illustrators, but among the few books is a monograph by J. R. Eyre on *Leonardo da Vinci's "Mona Lisa."* This is a brief for the authenticity of the Isleworth "Mona Lisa," now hung for safe keeping in our Boston Museum. It is advanced that this is the original picture, that of the Louvre the second. Leonardo's custom was to make two studies for every painting, and the description of that owned by the Giaconda family, and the likeness of Raphael's memory sketch of this to the Isleworth picture rather than to that of the Louvre, are the main strands in the argument which is strengthened by reproductions of the two paintings and the sketch.

Another book of art criticism, illustrated by many reproductions in black and white and several in color, is *Modern Painting*, W. L. Huntington's explanation of the underlying meaning and aim of the new schools, the Cubists, Futurists, Synchonists. Of the moderns himself, he writes with an earnestness and clarity that attracts even the skeptical conservative.

Arthur Davison Ficke, the author of "Twelve Japanese Painters," a series of poems inspired by certain Japanese color prints, has now produced a practical guide for collectors in *Chats on Japanese Prints*. Inasmuch as he brought to his task expert knowledge, as well as a poet's enthusiasm, and incorporated in his account the considerable amount of new information concerning several of the leading painters of the *Ukioye* School that has been unearthed in the last ten or fifteen years, since the treatises of Strange, Von Seidlitz and Fenollosa were issued, his book may unhesitatingly be pronounced the fullest and best handbook on the subject that has yet been published in English. He is master of a style of unusual clearness, distinction and charm; the story he tells of the development, flowering and decline of this unique branch of art makes, for the student or collector of *Ukioye*, more fascinating reading than the best of contemporary novels. To his excellent historical sketch of the whole school of the print designers Mr. Ficke appends a final chapter on "The Collector," which is filled with wholesome advice and sound sense.

Ancient oriental sculptural art is well set forth by the multitude of fine photographs in Morris Jastrow's volume on the *Civilization of Babylonia and Assyria* and *The Magic of Jewels and Charms* comes surely in part also from the East. This is another of Dr. Kunz's authoritative and rightly sumptuous books on precious stones. Their beauty and charm are set forth in a wealth of illustrations; cuts set in the text, often of quaint figures, and reproductions of ancient prints and paintings in doubletone and color, some of these remarkable in their rendering of light and tint.

The most serious American contribution to art is the volume in the Graphic Art Series, *Lithographs and Lithographers*, by Mr. and Mrs. Pennell. Lithography lent itself so speedily to mechanical processes that as a direct art, that of printing from the artist's drawing without the intervention of the engraver, it has hardly had its due, altho the present work is by no means its only defender, since besides the essay of Dr. Weitenkampf in *Die Graphischen Künste* of Vienna there are admirable chapters on this subject in both "How to Appreciate

THE NEWEST BOOKS FOR CHRISTMAS

Bird's Fountain

By The Baroness von Hutten, author of "Pam," "Sharrow," etc.

The story of a beautiful woman who, bored with the monotony of her existence, seeks relief from life's grayness in the society of a man whose past is unknown to her, but whose charm of manner has fascinated her to infatuation. In a moment of clearer vision she realizes how near she has come to the complete annihilation of her own happiness, and the outcome of her awakening is exquisitely pictured in this strong story of a truant love. *12mo, cloth, $1.35 net.*

Thankful's Inheritance

By Joseph C. Lincoln, author of "Cap'n Warren's Wards," etc.

A haunted house full of creaks and groans and stealthy, mysterious midnight visitors makes the whole population of Cape Cod sit up o' nights. Little Dan Cupid even takes a hand in the matter and despite the terrors of ghosts and "such" a real old-fashioned romance develops in which pathos and humor are combined in true Lincoln style. Illustrated by H. M. Brett. *$1.35 net.*

Rags

By Edith Barnard Delano, author of "The Land of Content," etc.

"Rags" is the name of a dear little ragged waif of a Montana mining camp, and this is the story of how she came to love the disinherited nephew of an old Eastern banker who had been her mother's sweetheart years before. *Illustrated, $1.30 net.*

The Passionate Crime

By E. Temple Thurston, author of "The Open Window," "The City of Beautiful Nonsense," etc.

The romance of Anthony Sorel and Anna Quartermaine as told by the simple country folk of old Ireland, whose quaint superstitions and vivid imaginings imbue the story with Celtic glamor, and the strange elusive inspiration of the Irish mountainside. *Cloth, $1.30 net.*

Three Score and Ten

By Amelia E. Barr, author of "All the Days of My Life," etc.

A book of optimism for old people. Mrs. Barr has written this book for those whose youth is but a memory, and she has packed it full to the brim with good cheer. A delightful volume for gift purposes. *$1.50 net.*

The Boy Scouts' Year Book

Published under the Supervision of the Editorial Board of the Boy Scouts of America.

The biggest boys' book of the year. Full of interesting stories and articles by the writers the boys like best. Over 100 pictures, 20 photographs, and 2 colored plates. It is just the thing for the boys' Christmas gift.

8vo, cloth, decorated cover, $1.50 net.

Forty Years in Constantinople

The Recollections of Sir Edwin Pears, 1873-1915

This is unquestionably one of the most important and timely books of the year. A history of modern Constantinople, its people and events, by the greatest living authority. *With numerous illustrations. $5.00 net.*

Isles of Spice and Palm

By A. Hyatt Verrill, author of "Porto Rico, Past and Present"

A book for the fireside traveler dealing with one of the most delightful spots on earth—the Lesser Antilles. It is not a Baedeker or guide book, but it answers the purpose of both, for it contains just the information the visitor to the islands may need. *Profusely illustrated from photographs. $1.25 net.*

The People's Government

By David Jayne Hill, Formerly Ambassador to Germany

A handbook on the relationship of the citizen to the State, which will be of special interest to all students, lecturing, business men, lawyers, teachers and clergymen. Dr. Hill's standing as an authority on international law and diplomatic history is proverbial, and in this book he incorporates much interesting material that will go a long way toward the solution of many of the vexing problems now filling the leading men of the nation. *12mo, cloth, $1.25 net.*

The Book of Stars

By A. Frederick Collins, author of "The Book of Wireless"

This book has been written with the view that it would help to become familiar with the sun, moon and stars without any previous knowledge of the heavenly bodies. It is an delightful study of constellations and may be followed without the aid of a telescope. *Profusely illustrated. $1.50 net.*

Send for New Illustrated Catalogue of Books for Christmas

D. APPLETON AND COMPANY, Publishers, New York

Prints" and "American Graphic Art." Mrs. Pennell's historical essay has received additions since its appearance in 1898, and Mr. Pennell's chapters on methods are authoritative, since they are by one skilled in the craft. With the exception of the extraordinarily poor Sargent reproduction the illustrations are excellent and show the possibilities of the lithograph, from Harding's splendid tree and Piloty's Boar Hunt, full of action, to the beautiful examples of portraiture by Gavarni and Van Veth. The costlier editions of this work contain three lithographs by Mr. Pennell, and his *Pictures from the Land of Temples*, also just published, is a collection from the lithographs that he made in Greece. What most impress him in this land, as he saw it for the first time, was the setting of the buildings in their relation to the landscape. These effects he has striven to convey, and for the most part with admirable success.

Frank Brangwyn and Mr. Sparrow chose a fascinating subject for their collaboration in *The Book of Bridges*. The pictures in black and white are vigorous and the color work full of variety and suggestiveness. There are Chinese, Indian, Persian bridges, besides of course such romantic constructions as the Alcantara at Toledo, the Roman bridges of Italy and the medieval military bridges of France. In the *Fountains of Papal Rome* one looks for pictures fully as rich in imaginative suggestion, or else of practical accuracy. But Rudolph Ruzicka, who illustrates Mrs. Charles MacVeagh's essay, here makes of wood engraving a sort of hieroglyph, in which tho the meaning of the symbolic dots and dashes is fairly clear, one gets no sense of either reality or vision.

In the little book, *New York Scenes—A Series of Wood Engravings in Colour*, issued to its members by the Grolier Club, Mr. Ruzicka has done much more delicate and imaginative work. These cuts are made after the fashion of the Japanese block printing, with a different block to each color; so cut, however, as to print across the grain instead of with it as in the Japanese prints. The most effective of these are of High Bridge in the snow, the blues and grays of which give a fine sense of cold and silence and of the mists swathing Queensboro Bridge.

As we turn the leaves of the folio *Peter Pan*, we are thankful that Arthur Rackham could stay in his Hampstead studio thru this heavy year. Here is play for all his whimsical humor and original color, and he has used them generously in such pictures as that of the quarrel of the fairies and the birds and Peter Pan's interview with Solomon Crow, the pixie squattins at the tree foot. What will give a wider pleasure, however, are his pictures for Dickens' *Christmas Carol*. If there should prove to be any more popular holiday publication than this we would like to see it. Possibly Scrooge himself is a bit fantastically long fingered, but one cannot cavil after

seeing Bob Cratchit sliding down Cornhill and the ghosts floating by Scrooge's window. Instead we only wish there were a picture of Scrooge ordering the Cratchits' goose!

There is equally delightful humor, tho of quite another sort, in Maxfield Parrish's drawings for the Knickerbocker *History of New York*. Serious minded citizens these, enjoying their pipes together on the cover, yet neither worthy Warden Schoonmaker nor good St. Nicholas himself, nor any of the other quaint self-satisfied personages that figure in the pages, see anything funny in themselves or their neighbors. Printed in sepia, mounted on heavy terra-cotta paper, these drawings make this one of the most attractive of the season's reprints.

Stephen Gwynn's *Some Famous Cities of Ireland* contains one picture we should know as Hugh Thomson's, that of the urchin holding back the herd of cattle. This might, for its characteristically humorous line work, have come from the pages of "Old Coaching Days." But these other fair-tinted landscapes and soft black and whites, like wash drawings, tho refined, and pleasing, and no doubt giving the note of the Irish scenery, have not, for his old admirers, the distinctive quality of Hugh Thomson.

Two sets of drawings by Lester G. Hornby are out this year. The first are published in *Old Concord*, Allen French's pleasant book on the American Mecca. Drawn in the artist's reserved style, they well express the somewhat rigid New England village. The second group is in *Paris Reborn*, by H. A. Gibbons, a book already reviewed in these columns. But the pictures deserve a word to themselves. The grayish tint of the paper on which several are printed gives a depth and softness of tone lacking in the usual yellow ground, and as one studies these, from that of the Rheims Cathedral, etched just before its mutilation, to the lively sketches of the streets of Paris, one sees why specimens of Mr. Hornby's work have been bought by the national museums in several countries besides our own.

Leonardo da Vinci's "Mona Lisa," by J. R. Eyre. Charles Scribner's Sons. $2. *Modern Painting*, by Willard Huntington Wright. John Lane Co. $2.50. *Japanese Prints*, by Arthur Davidson Ficke. Frederick A. Stokes & Co. $2. *The Civilization of Babylonia and Assyria*, by Morris Jastrow. Philadelphia: J. B. Lippincott & Co. $6. *The Magic of Jewels and Charms*, by G. F. Kunz. Christmas Gifts Worth While

¶ You can't *give* your friends good health, but you can give them books which will show them how to *keep* good health. Useful gifts are always appreciated, and what gift could be more useful than a book which teaches a man how to keep his most cherished and valuable possession—good health?

Special Christmas Service

We will be glad to mail our books direct to your friends, in a special Christmas wrapping, enclosing your card if you so desire. This special service will save you much time and trouble, and our customers find that this is a great advantage. Just make out your list of books, write plainly the names and addresses to which they are to be directed, enclose a sufficient number of your cards, and your remittance for the proper amount—then we will take care of the delivery.

The Story of Camp Fire

¶ Healthy, strong, vigorous girls—the kind that make the capable wives and competent mothers—the kind of a girl and woman you want your daughter to be—read a part of the "Story of Camp Fire." ¶ "Camp Fire" means to girls what "Boy Scout" means to boys. The whole idea is so fascinating, and has been surrounded with such delightfully attractive ceremonies, ritual and costuming that the movement is sweeping the country. Mothers approve of it because they its influence their girls wish to know and learn the very things their mother wish to teach them about home, health, work and love. There never was a more fascinating, thrilling, helpful story for girls than this "Camp Fire" book which Ethel Rogers has written of the wonderful outdoor life girls live at the Sebago Wohelo camp. To read the book seems just like living among the girls—learning to swim, dive, paddle a canoe, "hike," cook, hold "council fires" and many other delightful things, while growing into strong, splendid, capable young women, with an abundance of health and energy. ¶ The introduction is written by Miss Gulick—the founder of Camp Fire—and there are more than 50 beautiful pictures, songs and Camp Fire symbols. There are over 250 pages, superbly decorated, printed and bound in Camp Fire colors. This is a book which every girl will delight in receiving for a Christmas gift. The price is only $1.25 net, postpaid. (See our guarantee below.)

Scientific Exercise for Health

¶ Without scientific instruction, you are likely to over-exercise and this is just as dangerous as not exercising at all. This is why Prof. A. R. T. Winjum has put into a book the manual of exercises taught by him for years while Director of Physical Training at the Battle Creek Sanitarium. Here, exercise for health and beauty has been made a conscientious study and developed into a reliable science. In Prof. Winjum's book, he tells you exactly what you should do to develop your muscles evenly and build your body into a splendid bulwark of health. And—he shows you plainly how to do this with hundreds of specially posed photographs, diagrams and charts, all included in this book, containing over 350 pages. These exercises you perform without apparatus right in the privacy of your own room. Library cloth binding. Price $2 net, postpaid. (See guarantee below.)

New Cookery—with "Calories"

¶ With the scientific food values expressed in calories under each recipe Miss Lenna Frances Cooper's book—"The New Cookery"—tells you just what nourishment (in percentages of protein, fats and carbohydrates) is in each helping. With this knowledge, you can regulate your diet and that of your family so as to get a "balanced ration" exactly suited to your daily needs. "The New Cookery" is the first cook book ever offered in which the scientific values of the foods are given under each recipe. Diet is no hardship with such a book. It tells you exactly what you can eat with safety. Over 350 pages of recipes with many interesting illustrations. Library cloth binding. Price only $1.50 net, postpaid. (See guarantee below.)

Diet and Digestion

¶ Indigestion, Constipation, and the more serious ills to which they lead are so common and cause so much needless pain and suffering, that Dr. John Harvey Kellogg has written a book telling how such disorders may be avoided. Dr. Kellogg is the greatest living authority on diet and digestion. For nearly forty years, he has been Superintendent of the Battle Creek Sanitarium, where he has had opportunity to observe, treat and prescribe for thousands of cases of indigestion, constipation and the more serious ills they lead to. What Dr. Kellogg tells you, therefore, is the result of experience. He deals with facts—not theory. His new book is called "Colon Hygiene," and in it he tells you of all digestive disorders, their causes and natural methods for their relief. Nearly 400 pages, with many illustrations, diet tables and instructions for exercise, rest and sleep. Library cloth. Price $2 net. (See guarantee below.)

Steady Your Nerves

¶ Self-control—poise—the balance which enables you to meet and handle any situation is the most valuable asset you can have. And—no one man living is so well able as Dr. John Harvey Kellogg to tell you how to care for and control your nerves. For years Dr. Kellogg has made a scientific study of the basic causes of nervousness. He speaks from experience—deals with facts. In his latest book, "Neurasthenia," Dr. Kellogg tells you how to get at the cause of nervousness so as to regain, and retain, nerve balance and control. Over 300 pages, with many illustrations, diet tables and instructions as to exercise, rest and sleep. Library cloth binding. Price only $2, postpaid. (See guarantee below).

Our Guarantee

We guarantee that you will be absolutely satisfied with any of these books. If, after examination, you find that you are not satisfied, for any reason whatsoever, you can return the book at our expense, within 5 days, and we will refund your money at once, without question, and *your examination will have cost you nothing.* ¶ Send for our new free catalog of health books. A post card will bring it to you. Send order to—

The Great Big Romantic Story of the Year

BELTANE THE SMITH

By the Author of "The Broad Highway"

The greatest literary achievement for years, a book that is bound to last and grow in popularity with the years. A romance of love and adventure that for charm and beauty rivals in its allurement Tennyson's "Idylls of the King."
—*Boston Globe.*

BELTANE THE SMITH

The author of "The Broad Highway" long ago proved the magic of his pen, and the many who have enjoyed his previous tales will find 570 pages of fresh allure and enjoyment in this new story of derring-do and the greenwood and high emprise and romantic love.—*New York Times.*

BELTANE THE SMITH

We follow Beltane from one exploit to another with a constantly increasing curiosity. The romance as a whole is illusive and it betrays a vigorous and resourceful imagination.

LITTLE, BROWN & CO., Publishers Boston, Mass.

PICTURES FOR YOUNG FOLKS

Among the season's juveniles are six books notable for their illustrations. *Shoe and Stocking Stories*, by Elinore Mordaunt, comes to us from England, as some of its words and spelling show. Its pictures are by Harold Sechel, who put in delightful head and tail pieces as well as a full page picture for each story and opened the book with a charming under-the-sea picture in greens and orange and browns. The other five books are reprints, and we head the list with *Heidi*, that loveliest of German stories, now printed with eight happy pictures in color, by Maria L. Kirk. W. Heath Robinson has illustrated *Water Babies* with colored pictures of youngsters above and below water, all jolly, and with no end of black and white sketches scattered thru the text, of the boy all over prickles, the "great, lazy sunfish," and other old friends. *Treasure Island*, with decorations and joyously exciting pictures by Louis Rhead, is a striking book from its brilliant cover to its last illustration, for Mr. Rhead knows perfectly the expressions appropriate to buccaneers and pirates.

In contrast is *Little Women*. Jessie Willcox Smith emphasizes its sentiment rather than its humor, but she gives a fine bit of color in Beth at the piano, and a characteristic presentment of Jo and her professor's eventful walk in the rain. Last is *Hans Brinker*, illustrated by one who knows Holland well, George Wharton Edwards. As enjoyable as the pictures in colors are the chapter headings of wooden shoes and windmills all a-row, and the end papers of a cosy Dutch interior.

Shoe and Stocking Stories, by Elinore Mordaunt. John Lane Co. $1.25. *Heidi*, by Johanna Spyri. Philadelphia: J. B. Lippincott Co. $1. *Water Babies*, by Charles Kingsley. Houghton Mifflin & Co. $2. *Treasure Island* by R. L. Stevenson. Harper & Bros. $1.50. *Little Women*, by L. M. Alcott. Boston: Little, Brown & Co. $2.50. *Hans Brinker*, by M. M. Dodge. Charles Scribner's Sons. $2.

A GUIDE TO CHILDREN'S READING

A type of book that is to be warmly recommended to parents, librarians and teachers, is the one wherein expert advice is given on the subject of what children shall read. We are deluged year by year with book lists, compiled by librarians of various tastes, and these serve their purpose in recommending for immediate consumption the books on the library and school shelves. But the manual that is most serviceable is the one that comes from an authority who understands child psychology and child taste. We therefore recommend highly the consideration of *What Shall We Read the Children*, by Miss Clara Hunt, of the Brooklyn Public Library. In this little volume Miss Hunt considers the poetry habit for children, fairy tales, and other interests of the very young child. She has a sense of humor, a keen appreciation of childhood, and a sound basis for the education of the child and a sound taste for good literature. Not only that, but in order to make her book practical to others she has definitely analyzed certain types of literature so that the reader

may easily apply her critical comments to definite examples of story and poem. Miss Hunt has chosen well in her book lists, and altogether has prepared a little volume which will fill a great want.

Houghton, Mifflin. $1.

POETRY

Nearly every writer interested in the subject of children's literature has attempted an anthology, and we have a long array of such books, from the time of Palgrave's "Children's Treasury of English Song." For example, no better collection can be found than Henley's "Lyra Heroica" or E. V. Lucas' "Book of Verse." Kate Douglas Wiggin and her sister have likewise compiled three volumes, beginning with poetry suitable for the nursery, and in their "Golden Numbers" giving a selection suitable for grown people as well. A few years ago, Burton E. Stevenson issued a ponderous volume, entitled "The Home Book of Verse," containing over three thousand selections—a veritable encyclopedia, competing with Bryant's collection and bringing the choice beyond Stedman's American and Victorian anthologies. It was to be expected that Mr. Stevenson should follow his past work as an anthologist with *The Home Book of Verse for Young Folks*. This is rich in contents, but, unfortunately, it omits many excellent examples of poetry suitable for children. While lacking in the martial spirit and in the picturesque phrases and rhythms of the ballad, it is still a very good anthology for classroom and library shelves. His selection is by no means rigorous, and we regret that he did not write a preface in explanation of the motives prompting both his selections and omissions.

Holt. $2.

REPRINTS

A Dog of Flanders, by Ouida, is a story perennial in its freshness and in its appeal to children of all ages. Unfortunately, the illustrations in this new edition are not quite as spirited as they ought to be: they are too literal in their black and white, and too ambitious in their color scheme.

The Lippincotts, who publish this volume, have likewise issued a splendid series called Stories All Children Love, containing such reprints as George Macdonald's "At the Back of the North Wind," "Princess and the Goblin," and Mrs. Molesworth's never-to-be-forgotten story of "The Cuckoo Clock."

Philadelphia: Lippincott. 50 cents each.

Fairy Tales Every Child Should Know was edited by Hamilton Wright Mabie some seasons past, and has met with much success. The present issue, with effective color plates by Mary Hamilton Frye, is excellent in its clear type, and wide, clean margins.

Doubleday, Page. $2.

The Children's Book of Birds, by Olive Thorne Miller, is a reissue of two of her books under one cover. This is a manual ith which any young reader seeking to be an ornithologist might wisely begin. The data are not too scientific, tho in every way are accurate. The style is agreeable. The colored pictures are helpful and delightful.

Boston: Houghton, Mifflin. $2.

BIOGRAPHY

We have, from season to season, called attention to the fact that the field of biography for children is practically an unexplored one, and librarians' reports indicate that they are greatly in need of individual and collective biographies for young people. Since that want was first made

"A Wonderful and Extraordinary Book"

H. G. WELLS' NEW NOVEL

THE RESEARCH MAGNIFICENT

By the author of "Marriage," "The Wife of Sir Isaac Harman," etc.

"Displays the best that is in Wells as a thinker, as a critic of men, as a student of social and political crises, and—most of all—as a novelist."—*Boston Transcript.*

WANTED

by a gentleman of [illegible] years, an engagement as a Companion. Has a pleasing voice and used to reading aloud. Has a splendid disposition, has been around the world and knows how to travel. Could care for small [illegible] correspondence and is familiar with bookkeeping methods, etc. Reply, stating requirements as to remuneration, etc., to "A. M.," care Independent.

known, the publishers have tried to enrich the field in many ways. But the biographical form is difficult to handle for children between the ages of ten and fourteen. Thereafter they are capable of being catered to along with grown people. Several excellent lives have appeared this season, one of the best being that of *Robert Louis Stevenson*, by Miss Overton, already reviewed in these columns.

Scribner. $1

Robert Louis Stevenson, by Amy Cruse, is an addition to a commendable little series called Heroes of All Times. It contains many very delightful pictures, poorly reproduced, and covers the subject somewhat as does Miss Overton.

Stokes. 75 cents.

True Stories of Great Americans is a series of books which, if properly selected and properly written, will be similar to the *English Men of Letters*. It has now eight titles to its credit. Those that have come to our particular notice being *Christopher Columbus*, by Mildred Stapley, and *Davy Crockett*, by William C. Sprague. Both of these authors have departed from the stereotyped methods and have striven to paint a portrait with considerable originality. We understand that the editor of the series has in hand a biography of *Thomas Edison* which will be issued soon.

Macmillan. 50 cents each.

The Child's Book of American Biography, by Mary Stoyell Stimpson, is an unfortunate treatment of an unusual assortment of people to be housed together between covers. The author has been unwise in having an education object in view,—with the consequence that her accounts are lifeless in their arrangement and in their narrative value. We recommend, in place of this, a book published last year thru the Century Company, "More Than Conquerors," by Ariadne Gilbert.

Boston: Little, Brown. $1.

Ten Great Adventurers. Kate Dickinson Sweetser here tells, in accurate, full, and agreeable manner, of the voyages of Francis Drake, John Smith, Columbus, Franklin, Livingstone, Garibaldi, and others. The book is attractively printed and illustrated, and should find a place as a welcome gift for young people.

Harper. $1.50.

Harold F. B. Wheeler has written a most graphic account of *Lord Roberts* in his *Boy's Life* of that General. With the thoroness of the average English author, he has based his material on authentic and accurate sources. Crowded as the book is with detail, the figure of Lord Roberts stands out, from his very earliest years, as one of unusual powers of generalship. So much so that the reader is able very clearly to trace for himself those characteristics which would undoubtedly apart from the opportunities he had in India and South Africa, have made him a commanding figure wherever he might have been placed. This is one of a very excellent series comprising the Boy's Nelson, the Boy's Wellington, and the Boy's Napoleon.

Crowell. $1.00

Commander Thomas D. Parker's *Young Heroes of the American Navy* which [illegible] aids itself as being a number of the Boy's Dollar Book Shelf, adopts an entirely different method in the exploiting of some heroless American heroes of sea. The style is far from historical, and is more nearly akin to the purely imaginative novelette. The author, himself a retired officer of the Navy, undoubtedly knows his subject, but he sacrifices detail for a conversational style which may prove interesting reading but which will leave behind it a less permanent impression of the subjects treated.

Boston: Page. $1.

PRACTICAL BOOKS

There is not an activity common to boys or to girls that has not been taken care of by some zealous writer on how to do things. The consequence is that these books serve to turn the boy into a practical worker and the home into a workshop. We admire the ingenuity of some of the suggestions, and we smile over the ease with which the suggestions come, even tho they may not be easily accomplished. Looking at A. Neely Hall's *Home Made Toys for Girls and Boys*, we see no reason why young people need go to the shops when they can so easily manufacture mechanical toys at home. Take for instance the chapter on "Home Made Clock Work Toys" or on "Home Made Electric Toys." Certainly nothing can tempt a boy more than the challenge to him to make things here suggested.

Boston: Lothrop, Lee & Shepard. $1.25.

There comes to us for review a small encyclopedia of *Boys and Girls Ask-at-Home Questions*, a catechism of inquiries suggested and answered by Marian E. Bailey. To be handed a book containing questions a child might ask is one thing. To be ready to answer the questions is another. The present author tries to help the child, the parent, and the teacher, by forestalling any unusual question mark that may be forthcoming during any day of the year.

Stokes. $1.25.

Scissors, needles, bottles of ink, fascinate all children. When a child is allowed to use these, he feels that he has truly entered into his realm of freedom. J. E. Tolson is the author of a book entitled *Scissors Stories, or Picture Cutting for Little People*, and the numerous suggestions given, with their black and white and silhouette drawings, are supposed to serve the double purpose of giving the child a good time and of cultivating a deftness of hand. It strikes us kindergarten teachers may here find suggestions of value during the class hour, and undoubtedly these will prove a boon to parents in the home.

Dutton. $1.

The story form is always the easiest way of carrying information to the child. It is also the easiest way of making a narrative wooden. C. H. Claudy, inventor of the Tell-Me-Why series of books, has written for this year's market the *Tell-Me-Why Stories About Color and Sound*, wherein the hero, who asks questions, learns much concerning the origins of art and music, and finds out for himself how the first paintings were made and how primitive man discovered the drum. Mr. Claudy believes in catching the child's interest thru the channels of least resistance.

McBride, Nast. $1.25.

ALL NATIONS

Youthful heroes and heroines are regular globe trotters. Scarcely a year passes that all lands are not fairly well represented in the stories that are written for girls and boys. Since the time when Knox used to write his "Boy Travels," there has been a competition among writers to see how wide a territory they could cover, carrying their plots into unfrequented corners of the United States, and following the world's events in Europe, Asia, and Africa. It is natural that the present state of Europe should inspire the writer for boys and that, at the same time, our difficulties with Mexico should be exploited in narrative form. As a fitting introductory to books of this character, we might mention the very suggestive treatment of *Flags of the World*, by W. J. Gordon. As its title implies, this book considers the insignia of the different nations, principally describing those flags and those maritime courtesies which are characteristic of England. But the book is by no means

R. S. ANDERSON & CO., 829 Fine Arts Building, CHICAGO

$13,400.31 on the Side

Mr. F. H. Dunlap of West Salisbury, N. H., in twenty five years cleared $13,400.31 from hens. This is a remarkable record, when it is known that Mr. Dunlap is employed ten hours a day in a store and all the time he has to put in with his hens is what he can get morning, noon and night. This $13,400.31 was all made on the side. Nor does Mr. Dunlap get fancy prices for what he has to sell. He ships to Boston, and takes current quotations from the commission men there. Mr. Dunlap began in 1887 with twenty hens. In 1910 his poultry profits figured out $1,188.05—and this is all on the side. Mr. Dunlap's hens have bought him a beautiful home, purchased a horse and carriage, sent three boys to school and college, besides saving something for a rainy day. Can others do equally well? "Sure thing," says Mr. Dunlap, "If they will wear out the soles of their shoes faster than they do the seat of their chair." The story of Mr. Dunlap's success and his methods is told in the book, "Side-Line Poultry Keeping," and it is only one out of a score of things to set the blood tingling and make one resolve to get next to the $600,000,000 spent in the United States each year for poultry and eggs.

$1,009.31 R. A. Richardson of Haverhill, Mass., a shoe cutter, made his hens pay him $1,009.31 in 1910 and kept working at the bench at the same time. How he did it is told in "Side-Line Poultry Keeping."

"SIDE-LINE POULTRY KEEPING"

is the name of a new book by the author of "200 Eggs a Year Per Hen," the most popular poultry book ever printed. "Side-Line Poultry Keeping" deals with the business side of poultry keeping as the other dealt with egg production. It tells how to make poultry keeping pay. It describes the methods by which F. H. Dunlap of West Salisbury, N. H., makes over $1,000 a year from eggs, devoting not over two hours a day to his hens. Not a detail left out. The book tells how to make a start, what breeds pay, how, when and where to buy a farm, how to make a living from the first, describes the most wonderful brooding system in the world, tells how to build the most economical poultry houses and trap nests, how to feed for best results, describes a feed that can be made for 15 cents a bushel and is without a peer for producing eggs, how to make money with pigeons, ducks and market gardening, how to buy and sell to advantage, how to pick out the laying hens, how to put down eggs so that they will keep a year, etc.

Invaluable to every man who wishes to make money on the side, and indispensable to the man who is looking forward to the free, independent, healthful life of the poultry farm. Ninety-six pages; illustrated. **Price 50 Cents,** or with the American Poultry Advocate one year 75 cents, two years' subscription and book for $1.00, or given as a premium for two yearly subscriptions at 50 cents each. Our paper is handsomely illustrated, 44 to 124 pages, 50 cents per year. 3 months' trial, 10 cents. **Sample free.** Catalogue of poultry books free.

LONGMANS' NEW BOOKS

The Inspiration of Responsibility

By the **Rt. Rev. C. H. Brent, D.D.,** Bishop of the Philippine Islands, Author of "Leadership," "Liberty, and Other Sermons," etc. Crown 8vo. $1.50 *net*

The material has all the simplicity and directness, the reserve, the candor and the true Christianity characteristic of the author.

The Crowd in Peace and War

By **Sir Martin Conway.** Crown 8vo. $1.75 *net.*

This is an attempt to deal in popular language with the relations of the individual to the crowd, and of crowds to one another. The writer discusses the broad questions of morality, religion, government, socialism, war, education, and so forth, from a novel point of view, and illustrates his remarks by numerous tales and citations from authors ancient and modern.

Black and White in the Southern States

By **Maurice S. Evans, C.M.G.,** Author of "Black and White in South East Africa." With Map and Index. 8vo. $2.25 *net*

A study of the race problem in the United States from a South African point of view

LONGMANS, GREEN, & CO. 443-9 FOURTH AVE., N. Y.

a partizan one, as the flags of France, Germany, Austria, Russia, and Italy find a place in the volume, which is copiously illustrated with color plates and half tones.

Warne. $2.25.

Katrinka, a tale of Russia, by Helen Eggleston Haskell, is the seventh in a Little Schoolmate Series, edited by Florence Converse. The story describes life in a Russian village, and gives an accurate description of life among the warm-hearted folk living near the Cossacks. There is a sprinkling here and there of police, nobles, and revolutionaries, without which Russia would not be Russia.

Dutton. $1.25.

Nearer home, we find Mrs. Lucy Fitch Perkins treating, with her customary charm of style and as an artist illustrating with her usual regard for atmosphere and child-likeness, her story of *The Mexican Twins*. For four seasons past, Mrs. Perkins has introduced us to twins in various lands, and no better book as regards style could be found for young folk than "The Dutch Twins," which began the series. In the present volume she gives us the intimate life of Tonia and Tita, thru which the small reader gains an abundant amount of information regarding the Saints' days, the games, and the daily duties of Mexican children.

Houghton Mifflin. $1.

Many boys will relish Dr. Kane's *Adrift in the Arctic Ice Pack*, which has been edited from the history of the first United States Grinnell expedition in search of Sir John Franklin. The original Diaries kept by Dr. Kane were filled with valuable scientific information, besides including picturesque descriptions of the life lived amidst an ice pack. Barring the scientific facts, the present book retains the essential account of the expedition.

Outing Adventure Library. $1.

One has only to glance thru A. Hyatt Verrill's *In Morgan's Wake* to realize [illegible]ly that it is a story of travel in the West Indies and Central America. A deal of information is given very much as grown folk used to hand it out to poor little Rollo in Dr. Abbott's stories of long ago. There is only one man who has effectively used this method and that was Thomas Knox in his Boy Travelers' Series. On the other hand, Mr. Verrill mixes a plot in with his information and thus kills several birds with one stone.

Holt. $1.35.

PLAYS TO ACT

Many teachers are discussing the valuable asset found in the dramatic instinct of children, and they are eagerly looking for suitable plays to be presented in the classroom. A number of books have been written on the subject of this dramatic instinct, and writers for children are beginning to turn their attention to the dramatic form. A little collection of plays by Grace E. Richardson is entitled *Peek in Pattypots*. These are simple in dialog, short in *dramatis personæ*, and inexpensive in costumes. The author accompanies each with suggestive comments on costumes, properties and the music to be used.

Chicago: Saxton. $1.

This matter of fatness and this alleged necessity of the dramatic instinct in the school room is more fully illustrated by a volume of *Plays for School Children*, edited by Anna M. Lothrop [illegible] and compiled for use in the [illegible] Margaret Kirk, principal of one of the New York public schools. The volume is a mixture of good and bad. An attempt in the last half of the volume is made to present dramatizations of such well known books as "Master Skylark" and "Through the Looking Glass." In the second half it seems to [illegible] best with dramatizations that one [illegible] like to test the efficacy of real drama in

this book had best turn to such a conglomeration as The Geographical Squabble or A Grammar Play On the other hand, it is interesting to note that many of these little plays were written in the class room by the children themselves, while at rehearsal.

Century. $1.25

An importation with an attractive title is May Pemberton's *Christmas Plays for Children*, with music by Rupert K. Lee. The titles of the plays are Lost Toys, Mistletoe and Holly, and Christmas in Rhymeland. Altho the dialog is more or less uninspired, we can see that the author has tried to appeal to the imagination, and for that we are more than thankful. Simple music accompanies each play, and in an appendix to the book there are several pages of suggestions for costumes.

Crowell. $1.

Even Mrs. Laura E. Richards has essayed the dramatic form in her Yuletide book of the year, *The Pig Brother Play Book*, and which the publishers advertise as being suitable for young people between the ages of six and eleven. Another title might have been Ten Minute Dramas for the Class Room, or Moral Dialogues. The plots are very pointed in their attempt to drive home some cardinal virtue, and this book is an excellent illustration of a false use of the dramatic instinct.

Boston: Little, Brown. 50 cents.

FOR THE YOUNGEST YOUNGSTER

The ingenuity of the publishers in manufacturing tempting little volumes for little folks is never flagging at this period of the year, and it makes no difference how expensive a book may be to manufacture, if its *raison d'être* is "to be cut up." The scissors book is a type of literature that naturally spells quick profit. Take for example, *The American Boys' Cut-Out Book of Soldiers*, pictured by George Alfred Williams in direct defiance of those parents who would inculcate in the young person the desire for peace. It was all the present reviewer could do to refrain from stopping his work and cutting out the field artillery, cavalry, and infantry, pictured on thick cardboard, with directions as to how the army could be set in readiness for a game of battle. The book is a modern substitute for the leaden soldiers of earlier days.

Stokes. $1.25.

A fascinating volume is Clifford L. Sherman's *The Dot Circus*, which the young artist who is just starting out to picture everything he sees in terms of lines and abnormal colors will welcome. For the only thing he has to do is to learn to count to one hundred, and then to follow the numbers on each printed page with a soft lead pencil. The results will be more than satisfactory to his sense of humor, and each picture will be drawn with a certain zest until the very last number is counted. Here is another book that can be used only once.

Houghton Mifflin. $1.

One of our best writers for the nursery is Miss Maud Lindsay, who has just issued a book for little children called *The Story Teller*. The style is an excellent indication that it is not necessary for a writer to descend to the depths of "words of one syllable" for a young person's understanding. Miss Lindsay resorts to much repetition in her stories, but this repetition only helps to enhance the effectiveness of her plot. She is imaginative and has poetic fancy, and these stories should find a warm welcome from parents on the lookout for easy literature for their young people.

Boston: Lothrop, Lee & Shepard. $1.

A difficult problem confronting the nursery is the matter of suitable picture books, and it is a constant surprize to us when we find kindergartners and teachers

You Take No Risk

This Razor is
GUARANTEED FOR LIFE

This Shumate "Barber" razor is so good that we dare guarantee it to you for *life*. Here's the reason—the blade is made from Tungsten Alloy Steel which takes a keener edge than any ordinary steel *can*—and holds it. You can use it for years without honing. The secret of this wonderful steel is *ours alone*, and we guard it jealously.

Here's our *unqualified guarantee*: Buy a Shumate "Barber" razor and use it—not once, but as long as you like. If you say after an exacting trial that you don't like it, we'll exchange it *without a word*.

Sent postpaid, **$2.00**

In remitting mention your dealer's name and a shaving brush, and proof that will be included with your razor.

State whether you want light, medium or heavy blade. Heavy blade for very strong beards.

A useful X mas present for "Dad"

THAT knowledge of the momentous happenings of these five years is more vital *now* than that of all the previous centuries of human thought and activity? Of course you do. Then

Write For The FREE 80-Page Book

It tells about this New International Encyclopædia, made in America, which the educational world has accepted as the "Best and fullest in existence as an encyclopædia of American interests for American readers." It contains sample pages, showing the clear, legible typography, the easy, interesting style written in English you can understand; note the specimen illustrations, the splendid maps, the rich, durable bindings, the thin, tough, opaque special paper that makes the volumes a pleasure to handle. Get This Book NOW.

Read this letter from the Rev. W. W. Brown, Secretary of International Sunday School Association.

"Frequent use of the New International Encyclopædia has clearly proven its great value. I find it superior to all others in its breadth of treatment and accuracy of statement. Its method of indexing makes its large store of historical information and scientific discovery and knowledge easily accessible. Its carefully selected bibliography readily opens up the way to further investigation for the inquiring student. Its accompanying volume of suggestive courses for reading and study provides the foundation for a liberal education."

Realize that—"a liberal education" in your own home; an ever ready "Alma Mater" whose distinguished faculty, hundreds strong, has hunted up and arranged for your instant use all the knowledge of the world, down to the present time.

Knowledge means efficiency; efficiency leads to opportunity; and when opportunity knocks at the door be ready to receive her with open arms—you and yours.

LIPPINCOTT'S SELECTED Books for Gifts

Every Christmas Package Should Hold

A Christmas Carol

By CHARLES DICKENS. With ARTHUR RACKHAM'S Illustrations. The most beautiful edition of the most appropriate book for Christmas. 30 illustrations (12 in color). Cloth. $1.50 *net.*

Heart's Content

By RALPH HENRY BARBOUR. Romance and plenty of it; fun and plenty of it; a happy man who "starts things," and who at the end makes a woman happy, too. The beautiful illustrations in color, the page decorations, handsome binding and the tasteful sealed package are exquisite. $1.50 *net.*

Nothing Better Than These Fine Editions

The Magic of Jewels and Charms

By GEORGE FREDERICK KUNZ, A.M., Ph.D., D.Sc. Illustrated in color, duotone and line. A fascinating volume upon magic jewels, celestial stones, stones of healing, charms ancient and modern, etc., etc. The result of a quarter century research and collecting on the part of the author. Full of unique and interesting information. Uniform in style and size with "The Curious Lore of Precious Stones." $5.00 *net.*

Historic Virginia Homes and Churches

By ROBERT A. LANCASTER, Jr. **A limited edition printed from type.** 316 illustrations, and a photogravure frontispiece. The most important work on any State yet published in this country. It describes practically all the houses of historic interest in Virginia, gives illustrations of most of them, as well as the churches most likely to engage attention. $7.50 *net.*

Quaint and Historic Forts of North America

By JOHN MARTIN HAMMOND. 71 illustrations. Ornamental cloth, gilt top, boxed. Timely and interesting to the last degree in these days of war, is this volume, not on "fortifications" as such, but on the old and existing forts, with their great romantic and historical interest. $5.00 *net.*

English Ancestral Homes of Noted Americans

By ANNE HOLLINGSWORTH WHARTON. 29 illustrations. George Washington, Benjamin Franklin, the Pilgrim Fathers, William Penn, Virginia Cavaliers, and other noted Americans are traced to their English ancestral homes, with much entertaining and interesting information on the way. $2.00 *net. Half morocco,* $4.50 *net.*

The Civilization of Babylonia and Assyria

By MORRIS JASTROW, Jr., Ph.D., LL.D. 164 illustrations. Large 8vo. Boxed. The only work on the subject treating of the entire civilization of these ancient nations —language, laws, religions, customs, buildings, etc.,—other books have treated only partial phases of the subject. $5.00 *net*

Joseph Pennell's Pictures in the Land of Temples

A new art work by the master draughtsman of the age. Containing 40 plates in photogravure of Mr. Pennell's wonderful drawings, presenting to us the immortal witnesses of "The Glory That Was Greece" just as they stand today, with notes by the artist. Octavo. Lithograph on cover. $1.25 *net*

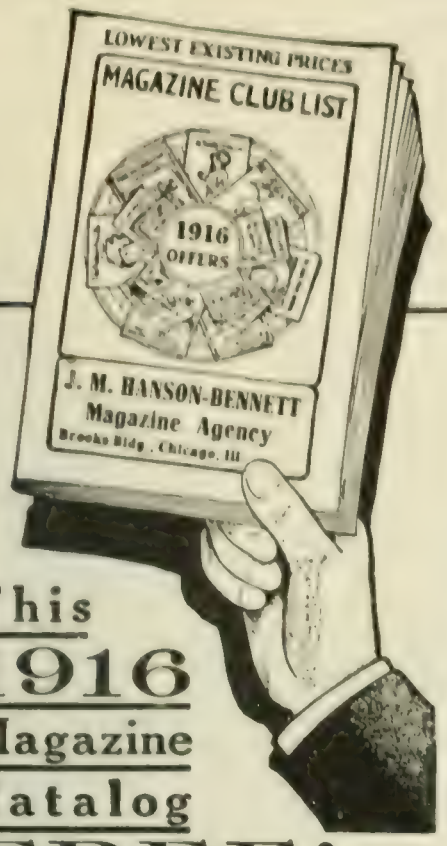
101 Fulton Street, New York

ignorant of the existence of such volumes as those illustrated by Randolph Caldecott, Kate Greenaway and Walter Crane. All of these books may be obtained thru the American publishers, Frederick Warne & Company.

Willy Pogány's attempt to picture *Cinderella* and *Little Mother Goose* is commendable, for it is an effort in the right direction. The artist makes effective use of simple lines which are repeated in the color plates thruout the little books. The one striking defect is to be found in the flimsy way each volume is bound. We cannot quite relish the style of *Cinderella* as retold in verse beneath the color plates, and we believe that a more varied assortment of the Mother Goose rhymes might have been used. But the general festiveness of the volumes quite overweighs any critical strictures we might make against them. McBride, Nast. 50 cents each.

As a usual thing we do not enjoy reviewing stories dealing with such a subject as Miss Katharine Pyle has selected in her *Six Little Ducklings.* But so well has the author won over our sympathy for the feathered heroes and heroines, and so pointedly has she illustrated in her line and tinted drawings the tragedies that befall the visiting chickens that we can find ourselves reading the book to the end. Unfortunately, the publishers confused us, and most decidedly will confuse the young reader, by placing a large number of the illustrations so that we were constantly having to turn back in order to find the picture we needed. This very mild little tale will meet with great appreciation and should prove an acceptable addition to the story hour both in library and home.

Dodd, Mead. $1.



For older children, let us say from six to twelve years of age, Miss Abbie Farwell Brown has told in pleasing fashion the story of *Kisington Town,* wherein a boy stays the destructive hand of a war lord while telling him a sufficient number of stories to allow defenders of Kisington to come to its aid. The war ends suddenly, all due to the story reading power of the young hero. It was in this manner that "The Arabian Nights" were told, and Miss Brown has a good literary ancestry to vouch for the effectiveness of such a method. The present tale is written with much agreeableness, altho Miss Brown must be careful in her style not to lose strength in her desire to spread sweetness and light.

Houghton Mifflin. $1.25.

Among the very small books that are of Christmas stocking size may be mentioned Miss Ada Skinner's *The Tale of Tibby and Tabby* (Duffield, fifty cents), and Edith B. Davidson's *The Bunnikin's Bunnies' Christmas Treat* (Houghton, Mifflin, fifty cents). These are almost as infantile in form and style and subject matter as the readers for whom they are intended. Among the larger books we have room to mention only *The Sleepy Song Book* (McBride, Nast, $2), consisting of poems by Eugene Field, Florence Campbell, and May Byron, set to music by H. A. Campbell. The full page color illustrations are more delicate than they are excellent in workmanship, and the title page reproduces the hideous cover design which is nondescript in its color and in its pictorial symbolism even tho we know the object was to indicate the sleepy side of the songs. A festive volume of equal size is *When Christmas Comes Around,* containing stories by Priscilla Underwood and pictures by Jessie Willcox Smith (Duffield, $1.35).

BOY SCOUTS AND OTHER BOYS

The activities of boys seem to be taking well defined channels in their literature, and the supply of Boy Scout stories has been more than enough to meet the de-

mand. In fact it has been most difficult for the Boy Scout organization to put a stop to the promiscuous use of the name to exploit books of inferior quality. The same dilemma has confronted the officers of a kindred organization, the Camp Fire Girls. Nevertheless this "organized service" spirit in the child world finds ample reflection in their literature. We mention a few as representative of the type.

Boy Scouts at the Wildcat Patrol, the third in a series, is by Walter P. Eaton, and again introduces to his readers the character of Peanut. The author makes a satisfactory novelization of the Boy Scout handbook, with its rules and regulations. Such a story may almost be measured by its chapter headings.

Boston: Wilde. $1.

The Boy with the U. S. Life Savers, by Francis Rolt Wheeler, is a book closely related in spirit to Boy Scout ambitions, inasmuch as the narrative is based on real service and real adventures with the Coast Guard. Dr. Rolt Wheeler is the author of a "U. S. Service" series, wherein, thus far, seven volumes have been issued.

Boston: Lothrop, Lee & Shepard. $1.50

The Young Wheat Scout, by Hugh C. Weir, is the fourth in a "Great American Industries" series. In order to make this narrative accurately informative, the author sought the coöperation of the International Harvester Company. On the supposition that truth is oftentimes stranger than fiction, Mr. Weir has here attempted, in story form, to give children the history of wheat.

Boston, Wilde. $1.

The Boy Scouts of Snow-Shoe Lodge, is a story of the North Woods, written by Rupert Sargent Holland. The environment—mid-winter in the Adirondacks—affords ample outlet for such sports as trapping, snow-shoeing, skating, sledding, and curling. Things happen in order to put Boy Scout service into practise.

Philadelphia, Lippincott. $1.25.

Smugglers' Island, the story of a modern Swiss Family Robinson, is by Clarissa A. Kneeland, and contains just the admirable spirit instilled into the Boy Scout adventurer. Four children are, by accident, cast upon a lonely island for seven years. The narrative illustrates the manner in which they all get the better of circumstances, and manage to exist thru their own initiative. The tale is not as ingenious as the classic on which it is modeled; but it admirably proves its point that necessity is the mother of invention.

Houghton Mifflin. $1.25.

The Boy Scouts of Black Eagle Patrol, by that seasoned writer for boys, Leslie W. Quirk, has for its hero a lad nicknamed "Bunny," who, at first a tenderfoot, proves himself at last to be an A-1 Boy Scout. The book is well written.

Boston: Little, Brown. $1.

There is an effort on the part of the Boy Scouts to keep in personal touch with the war. Besides L. Worthington Green's *Two American Boys in the War Zone* (Houghton, Mifflin, $1), which tells of two boys caught in Russia, we have seen Franklin T. Ames' volumes, *Between the Lines in Belgium* and *Between the Lines in France* (Dodd, Mead, $1 each).

We always have with us the college story or the story of special sport. *Left Tackle Thayer*, by Ralph Henry Barbour, both in pictures and in incident, bears close relation to the usual football story, wherein a "green" member is seasoned, and serves his team in good stead at a critical moment.

Dodd, Mead. $1.25.

Deal Woods, by Lotta Griswold, barring certain doubtful points of characterization, is one of the best written school stories read this season. It has the same faults and excellences found in last year's book, "The Winds of Deal."

Macmillan. $1.25.

HURLBUT'S
Story of Jesus
FOR YOUNG AND OLD

A masterpiece! Fresh from the pen of the beloved Rev. Jesse Lyman Hurlbut, D. D., whose "Story of the Bible" is cherished in more than 500,000 homes. Written to fascinate both children and adults — and it does!

Published Just In Time For Christmas Giving

The NEWEST and MOST COMPLETE narrative of Our Saviour's life. A truly inspired book, written with all the lucid description, all the beautiful simplicity which Dr. Hurlbut's long life of reverent study and religious authorship make possible. Every page is an inspiration. Every chapter can be perfectly understood, even by children. A valuable aid to parents, teachers and ministers. It is difficult to conceive of a more appropriate gift for young people.

Illustrated by Wm. Hole, R. S. A., R. E.

Besides the glowing story in written word, this great book contains 200 vivid illustrations. Many are actual photographs. Eighty are full-page drawings by William Hole, R. S. A., R. E., sixteen of which are in colors. All have been carefully selected for uniformity and in themselves graphically tell the Gospel Story.

This wonderful book, with its 500 pages of large, clear type, 200 pictures, handsome cloth binding, embellished cover and chronological and topical index,

MUSIC BOOKS ENDORSED BY CHAUTAUQUA INSTITUTION

Modern Russian Piano Music

(TWO VOLUMES)

Edited by Constantin von Sternberg

Vol I. Akimenko to Korestchenko
Vol. II. Liadoff to Wrangell

Russia, the latest of the nations to develop a national school of composers is today producing the most original, spontaneous and vital music in Europe. Based firmly upon the riches of folk-song, the ethnical note is sedulously cultivated by men whose unquestioned erudition is still their servant, not their master: the result is a flood of music which shows in its beauty and strength the joy of its creation. In these two volumes of THE MUSICIANS LIBRARY are contained piano pieces of the highest musical and pianistic merit, never needlessly complex, and demonstrating the difference between "dignified *modernity* and its frenzied caricature, called *modernism*."

The Musicians Library

The Masterpieces of Song and Piano Music in a Series of Splendid Volumes, Edited with authority and engraved, printed and bound with surpassing excellence.

Complete list of contents of the 75 volumes issued and Easy Payment Plan Booklet free on request. Each volume in heavy paper, cloth back, $1.50. In full cloth, gilt, $2.50. A set of 5 volumes (in box), paper, $6.00. Cloth, gilt, $10.00.

"This unique series of beautifully printed music books is a real boon to musicians, whether professional or amateur, and to all people who really love the noblest art. The new volumes are all edited with the same authoritative and painstaking care that characterized the earlier issues in the collection."—The Independent.

Resonance in Singing and Speaking

By Dr. Thomas Fillebrown

Twenty-one Years Professor of Oral Surgery in Harvard University

For Singers, Speakers, and all who desire to improve the quality of the voice.

Price Postpaid $1.25

"The concise, easily understood, and yet complete little book by Dr. Thomas Fillebrown, is one of the best works on the subject that has ever come to our attention. Not only every student of singing but every student of public speaking will find it useful.

"We give this little volume, which at first sight may appear to be a technical one, this special commendation to our readers, because the strident and unpleasant use of the voice in conversation and in public speaking is one of the besetting sins of American life."—The Outlook.

A series of Educational Text - books suited to the requirements of the average student and covering every essential branch of musical instruction. Adapted for class use or individual instruction. These books are bound in neat, serviceable cloth.

Resonance in Singing and Speaking is one of the volumes of this successful library of which 29 volumes have been issued. Each volume can be obtained separately, if desired. Complete list free on request.

THE LEADING REVIEWS

Authoritative Articles on the World War

The Nineteenth Century and After, Fortnightly Review, Contemporary Review, any one, $4.50; any two, $8.50; all, $12.00. Blackwood's Magazine, $3.00; Quarterly Review, Edinburgh Review; Blackwood's and one quarterly, $6.50; with two, $10.00. either quarterly, $4.00; the two, $7.50; Booklet and specimen copies of monthlies free.

LEONARD SCOTT PUBLICATION CO., 249 West 13th St., New York

Against Odds, by William Heyliger, pleads as systematically for the glories of baseball, as Barbour does for football, and the book has as much of the spirit of pluck. This is the fifth in a St. Mary's Series."

Appleton. $1.25.

Camp Bob's Hill, by Charles P. Burton, has much of the spirit of its predecessor, "The Boys of Bob's Hill," and is fraught with the "gang" humor and love of adventure which characterized that first book.

Holt. $1.25.

Bob Hunt at Camp Pontiac, by George W. Orton, as its name implies, and as its pictures fully indicate, is a narrative with the usual athletic stress and strain, and when the book comes to a close, the author promises a new one. He is a graduate coach of track and cross country teams at the University of Pennsylvania.

Philadelphia: Jacobs. $1.

CAMP FIRE GIRLS AND OTHERS

The Camp Fire Girls of Brightwood, by Amy Blanchard, tells of the effect this organization had upon certain girls. It contains much healthful spirit, and imparts much out-door information of a practical sort.

Boston: Wilde. $1.

The Cinder Pond, by Carroll Watson Rankin, has a heroine who starts life as a member of a colony of squatters, but many things change her fortunes and her surroundings.

Holt. $1.25.

In Beth's Old Home, by Marion Ames Taggart, the heroine is carried over into a sequel from last year's "Beth's Wonder-Winter." There is goodly sentiment in this writer's stories.

Boston: Wilde. $1.25

Patty's Romance, by Carolyn Wells, is the thirteenth in a Patty Series. The heroine is vivacious, and handles her suitors as easily as any heroine of a seaside novel.

Dodd, Mead $1.

Women of the Camp Fire, by Margaret Widdemer, is full of outdoor adventure its chief object being to explore territory open to girl activity.

Philadelphia: Lippincott. $1.25.

FOUNDED ON HISTORY

Two writers collaborating in the telling of Revolutionary stories are Emilie Benson Knipe and Alden Arthur Knipe who this year are co-authors of two volumes, one, *Pee o' the King*, formerly published as a serial in *St. Nicholas Magazine*, and the other, *A Maid of '76*, both of them filled with exciting adventure. *Pee o' the King* is by far the better story, introducing a fine mixture of loyalty and romance with a considerable historical atmosphere thrown in.

Century. $1.25 Macmillan $1.25

Edwin L. Sabin's *Gold Seekers of '49* is one of the Trail Blazers Series, and tells with an account of fictional accuracy the story of California in the days when everyone was turning westward. The hero of this story takes a path now made easily accessible by the Panama Canal and his adventures are many and exciting.

Philadelphia: Lippincott. $1.25

Everett T. Tomlinson has done more than any other modern American writer to place before the boy reader in narrative form stories of the Revolution, of the War of 1812, and of the Civil War. He is author of a new volume called *Pioneers of War*, which in the usual style of attempted accuracy deals with life at Andersonville Prison. The heroes accomplish

marvelous deeds, and many a boy will revel in their adventures with a locomotive and with a railroad bridge, closely pursued by Confederate soldiers. The plot of the story carries one thru the whole course of the war from Antietam to Appomattox.

Houghton Mifflin. $1.35.

Another book of the same intensity of interest is D. Lange's *In the Great Wild North*, wherein, beginning with a trading post on the Hudson Bay, the hero and his father explore the Red River with an Indian, join in buffalo hunts and have hair-breadth escapes. The pioneer spirit of this volume is admirable.

Boston: Lothrop, Lee & Shepard. $1.

MISCELLANEOUS

Stories from the Earthly Paradise by William Morris, have been retold in prose for children by C. S. Evans, and besides the introduction, which deals at some length with Morris' influences, his friends and his methods of workmanship. There are twelve tales, including the one on Atalanta's Race. The format of the volume is attractive.

Longmans, Green. $1.50.

Stories from German History, from ancient times to 1648, have been written by Florence Aston. The author makes use of copious data, which she handles with skill, for example, in her chapters on the Reformation and on Martin Luther.

Crowell. $1.50.

Grimm's Fairy Tales, newly translated by Ernest Beeson, have been effectively illustrated in line drawings by George Soper. Many old favorites, such as Cinderella and The Sleeping Beauty come to us afresh under these new auspices.

Crowell. $1.50.

The *Children's Book of Thanksgiving Stories* is edited by Asa Don Dickinson, a former librarian, and contains a goodly array of writers to serve a literary dinner for which all young readers should be thankful.

Doubleday, Page. $1.25.

Mary Huse Eastman has caught the shyest and the most tricksy of the children of magic and set them in their alphabetical order in the *Index to Fairy Tales*, a guide that will be of great use to story tellers, teachers, heads of children's libraries and also to folk lore students.

Boston Book Co. $2.25.

The Little Red Doe, by C. J. Hawkins, is so delicate a piece of work, so touching a story, that we are not sorry to have the chance to mention it a second time, even tho this be due to our mistake in the earlier notice as to the price of the book.

Boston: Little, Brown. $1.

In an attractive little book Eugene Stock tells *The Story of the Bible*, of the origin of the canon, the languages in which the books were written and their writers, the manuscripts and the versions. Teachers and parents will find this the handiest of reference books on a familiar but little understood topic.

Dutton. 75 cents.

H. E. Rankin and F. H. Brown, in their first volume of *Simple Art Applied to Handwork*, treat of geometric designs, brush work, stencilling, needlework and lettering, and show the possibility of teaching to children the application of truly artistic design to articles of daily use.

Dutton. $1.25.

A new book, *Knitting Without "Specimens,"* comes to us from England, prepared for school use by E. P. and C. A. Claydon. The many patterns for doll's clothing will appeal to small girls. Directions and illustrations are clear. More space would have been given to lace had the book been written on this side of the water.

Dutton. $1.

What and Why is the Internal Bath?

By C. Gilbert Percival, M.D.

Though many articles have been written and much has been said recently about the Internal Bath, the fact remains that a great amount of ignorance and misunderstanding of this new system of Physical Hygiene still exists.

And inasmuch as it seems that Internal Bathing is even more essential to perfect health than External Bathing, I believe that everyone should know its origin, its purpose and its action beyond the possibility of a misunderstanding.

Its great popularity started at about the same time as did what are probably the most encouraging signs of recent times—I refer to the appeal for Optimism, Cheerfulness, Efficiency and those attributes which go with them and which, if steadily practiced, will make our race not only the despair of nations competitive to us in business, but establish us as a shining example to the rest of the world in our mode of living.

These new daily "Gospels," as it were, had as their inspiration the ever present unconquerable American Ambition, for it had been proven to the satisfaction of all real students of business that the most successful man is he who is sure of himself—who is optimistic, cheerful, and impresses the world with the fact that he is supremely confident always—for the world of business has every confidence in the man who has confidence in himself.

If our outlook is optimistic, and our confidence strong, it naturally follows that we inject enthusiasm, "ginger," and clear judgment into our work, and have a tremendous advantage over those who are at times more or less depressed, blue, and nervously fearful that their judgment may be wrong—who lack the confidence that comes with the right condition of mind and which counts so much for success.

Now the practice of Optimism and Confidence has made great strides in improving and advancing the general efficiency of the American, and if the mental attitude necessary to its accomplishment were easy to secure, complete success would be ours.

Unfortunately, however, our physical bodies have an influence on our mental attitude, and in this particular instance, because of a physical condition which is universal, these much-to-be-desired aids to success are impossible to consistently enjoy.

In other words, our trouble, to a great degree, is physical first and mental afterwards—this physical trouble is simple and very easily corrected. Yet it seriously affects our strength and energy, and if it is allowed to exist too long becomes chronic and then dangerous.

Nature is constantly demanding one thing of us, which, under our present mode of living and eating, it is impossible for us to give—that is, a constant care of our diet, and enough consistent physical work or exercise to eliminate all waste from the system.

If our work is confining, as it is in almost every instance, our systems cannot throw off the waste except according to our activity, and a clogging process immediately sets in.

This waste accumulates in the colon (lower intestine), and is more serious in its effect than you would think, because it is intensely poisonous, and the blood circulating through the colon absorbs these poisons, circulating them through the system and lowering our vitality generally.

That's the reason that biliousness and its kindred complaints make us ill "all over." It is also the reason that this waste, if permitted ot remain a little too long, gives the destructive germs, which are always present in the blood, a chance to gain the upper hand, and we are not alone inefficient, but really ill—seriously sometimes, if there is a local weakness.

The accumulated waste has long been recognized as a menace and Physicians, Physical Culturists, Dietitians, Osteopaths and others have been constantly laboring to perfect a method of removing it, and with partial and temporary success.

It remained, however, for a new, rational and perfectly natural process to finally and satisfactorily solve the problem of how to thoroughly eliminate this waste from the colon without strain or unnatural forcing—to keep it sweet and clean and healthy and keep us correspondingly bright and strong, clearing the blood of the poisons which made it and us sluggish and dull spirited, and making our entire organism work and act as Nature intended it should.

That process is Internal Bathing with warm water—and it now, by the way, has the endorsements of the most enlightened Physicians, Physical Culturists, Osteopaths, etc., who have tried it and seen its results.

Heretofore it has been our habit, when we have found, by disagreeable, and sometimes alarming symptoms, that this waste was getting much the better of us, to repair to the drugshop and obtain relief through drugging.

This is partly effectual, but there are several vital reasons why it should not be our practice as compared with Internal Bathing.

Drugs force Nature instead of assisting her—Internal Bathing assists Nature and is just as simple and natural as washing one's hands.

Drugs, being taken through the stomach, sap the vitality of other functions before they reach the colon, which is not called for—Internal Bathing washes out the colon and reaches nothing else.

To keep the colon consistly clean drugs must be persisted in, and to be effective the doses must be increased. Internal Bathing is a consistent treatment, and need never be altered in any way to be continuously effective.

No less an authority than Professor Alonzo Clark, M.D., of the New York College of Physicians and Surgeons, says: All of our curative agents are poisons, and as a consequence every dose diminishes the patient's vitality.

It is rather remarkable to find, at what would seem so comparatively late a day, so great an improvement on the old methods of Internal Bathing, as this new process, for in a crude way it has, of course, been practiced for years.

It is probably no more surprising, however, than the tendency on the part of the Medical Profession to depart further and further from the custom of using drugs, and accomplish the same and better results by more natural means: causing less strain on the system and leaving no evil after effects.

Doubtless you, as well as all American men and women, are interested in knowing all that may be learned about keeping up to "concert pitch," and always feeling bright and confident.

This improved system of Internal Bathing is naturally a rather difficult subject to cover in detail in the public press, but there is a Physician who has made this his life's study and work, who has written an interesting book on the subject called "The What, The Why, The Way of the Internal Bath." This he will send on request to anyone addressing Charles A. Tyrrell, M.D., at 134 West 65th Street, New York, and mentioning that they read this in The Independent.

It is surprising how little is known by the average person on this subject, which has so great an influence on the general health and spirits.

My personal experience and my observation make me very enthusiastic on Internal Bathing, for I have seen its results in sickness as well as in health, and I firmly believe that everybody owes it to himself, if only for the information available, to read this little book by an authority on the subject.—Advertisement.

THE INVENTOR OF FRESH AIR

BY JAMES J. WALSH, M.D.

THE announcement of the death of Dr. Edward Livingston Trudeau at Saranac recalls attention to all that he accomplished for the doctrine that the most important element in life for the well as well as the ill is an abundance of fresh air. Dr. Trudeau himself having acquired tuberculosis at the age of about twenty-five, went up to the Adirondacks when that region was not the home of millionaire campers and of numerous well equipped hotels, but on the contrary was the old North Woods with its very primitive accommodations, stage coach travel and absolute simplicity of life. Contrary to all the traditions in American medicine at that time, in spite of the fact that his tuberculous infection was of a very severe character, Dr. Trudeau became well enough to continue his professional work and then in the course of years to teach the world more about tuberculosis than any other physician in this country.

His one supreme idea was an abundance of fresh air for tuberculosis patients night and day. When it is recalled what medical traditions had been with regard to fresh air, particularly when it was cold, before this time, it will be easy to understand what a revolution in medical thinking Trudeau had to bring about. It had been the custom to keep the rooms of patients suffering from fever due to any cause almost hermetically sealed. Cool air always gave the patient a sense of chilliness and that was considered sufficient of itself to indicate that harm was being done. Any retardation of recovery and above all anything like a relapse was usually set down to some exposure to cold. Whenever a wound festered and gave any signs of septic infection people were said to have taken cold in it.

All this long established tradition and popular persuasion Trudeau had to break down. Particularly with regard to pulmonary diseases was there a very definite conclusion that any exposure to cooler air might produce serious complications or even fatal effects. Poor pneumonia patients were shut up in rooms almost as air tight as possible, the very cracks in the windows being stuffed with cotton or pasted over with paper and doors being treated the same way by the over-zealous. The surprise as we look back now is that any of the sufferers from pneumonia ever recovered. We have become convinced in our time that probably the best place to treat a pneumonia patient in New York City would be underneath the trees in the park. At least a distinguished medical authority on respiratory diseases once declared that he would rather be treat-

An Art-Philosopher's Cabinet

By George Lansing Raymond

Author of "Essentials of Aesthetics," "A Poet's Cabinet," etc. Crown, 8°. Illustrated, $1.40 net.

Salient passages from the works on Comparative Aesthetics of Dr Raymond, selected and arranged by Marion Mills Miller, Litt.D. The book is not designed for those interested exclusively in any one phase of art and its influence. It is a general work of commanding interest to the general reader.

"It is a book that will please a cultivated mind, to which one will return again and again."—*Chicago Examiner.*

"This volume is one that excels in attractive quotation."—*Indianapolis News.*

"Dr. Raymond's name is one to conjure with, for in the field of Johnson he is an authority. . . . The Cabinet contains gleanings showing a range of scholarship bewildering."—*Louisville Post.*

"Prof. Miller, who has made the selections, has rendered a service to the cultured-mind reader who delights to forage for them."—*Johnson Symphony Record.*

New York 2 W. 45th St. G. P. Putnam's Sons London 24 Bedford St.

ed there than in the best hospital in New York. Our pneumonia patients are now placed in rooms with open windows, or on the roofs of hospitals, and children suffering from the disease particularly are given just as much air as possible. They must be kept warm and there must be no depression consequent upon coldness of the extremities, but the air they breathe must be absolutely fresh, and if it is cold that seems all the better. This great change in modern medicine we owe more to Trudeau than to any one else here in America.

What is still more interesting is that as a consequence of Trudeau's own experience and that of many physicians we have gradually come to realize that if fresh air is so good for the ailing it must be at least equally good for those who are well. Sleeping rooms used to have their windows shut rather tightly and the better educated people were the more they seemed to think it necessary to exclude cold air from their apartments at night lest they should take cold. Now the windows of sleeping rooms are open as a rule, a great many people in the milder climates of the country at least, have all-the-year sleeping porches and in the summer time outdoor sleeping is growing commoner and commoner.

Someone once said of Dr. Trudeau that he was "the inventor of fresh air." It is curiously interesting to realize how men get away from the simple great beneficial things of life into complexities of civilization that are supposed to represent significant improvements on what has gone before, yet how often it proves that what is needed is a return to nature. According to the old myth, whenever the son of mother earth with whom Hercules was struggling touched the earth he renewed his strength, until Hercules finding out this truth from recurring incidents, lifted him away from the ground and squeezed him to death. The touch with mother nature probably means more for the health and happiness of mankind than anything else. At recurring intervals, however, when genius brings us back to nature it actually seems as tho we had come upon a new invention. Dr. Trudeau may remain for the memory of posterity then as that most precious of discoverers, the inventor of fresh air. The lesson of his life is indeed a heritage for believing in fresh air and a return to nature. He also insisted that in order to overcome tuberculosis one must have courage. For "tuberculosis takes only the quitters," that is, takes only those who have not the character and force of will that will enable them to live quiet lives in the open and eat simple food and sleep long hours for the length of time necessary to enable them to overcome the ravages of the disease in their bodies and start afresh on the road to health and strength. And for the well no better rule of life can be formulated than this which has done and is doing so much good to the ailing.

Underwear as an Investment

Have you ever thought of it in that way—as an investment in comfort that makes you more efficient?

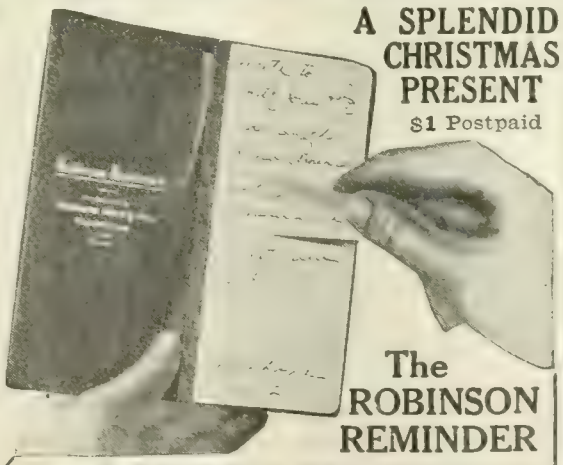
As an investment in health that prevents you from catching cold, feeling sluggish, losing time in your business?

Duofold Underwear

is comfortable and guards your health against sudden colds from overheating and then cooling off too quickly.

Duofold maintains the natural heat of the body but doesn't make you overwarm. It keeps you exactly right and *dry*.

Duofold is two-fabrics—cotton and wool with air-space between. Soft cotton, next the skin, is comfortable and absorbs perspiration. Air space ventilates and dries. Warm wool outside keeps you warm.



No getting overheated. No getting wet and cooling off too suddenly. Duofold stands between you and winter colds.

Duofold is a gilt-edge investment.

Made in Union Suits and Two-piece Garments for Men, Women and Children. Half the weight of woolen underwear of equal warmth. Duofold doesn't shrink.

Write for a free sample of Duofold fabric; see for yourself why Duofold promotes health and comfort.

Duofold Health Underwear Co 61 Elizabeth St Mohawk N Y

The music that brings back the dreams

HOW the memory thrills at the music of the Steinway! It stirs thoughts of the long-ago years when, even as now, the songs of the heart were enriched by its exquisite tones.

Three-score years ago, even as now, the Steinway was the ideal piano. In many a family, the Steinway which grandmother played is today a cherished possession—its durability a tribute to superior craftsmanship.

Consider the Steinway as a gift to wife or daughter or sister—an enduring evidence of the noblest sentiment. Nothing could be more appropriate. Consider, too, that this marvelous piano can be conveniently purchased at a moderate price.

Illustrated literature, describing the various styles of Steinway pianos, will be sent free, with prices and name of the Steinway dealer nearest you.

EFFICIENCY QUESTION BOX

CONDUCTED BY

EDWARD EARLE PURINTON

DIRECTOR OF THE

INDEPENDENT EFFICIENCY SERVICE

183. Miss G., Georgia. "How can I cultivate decision of character? I do things which I afterward keenly regret, and try to undo with embarrassing results. I decide on a course of conduct, then the opposite course which I had dismissed appeals to me strongly, and I am convinced I have made a mistake. From this weakness I have often suffered bitterly, and shall be grateful for suggestions."

I wish you had given a concrete example—it is hard to advise on generalities. However, try this. Take a number of instances where you feel you acted unwisely, and write down all the reasons *pro* and *con*, for your action. You will probably find several reasons containing a common principle which should give you a clue to avoidance of future mistakes. Your chronic weakness may be overimpulsiveness, supersentiveness, fear of people's opinion, worry and consequent mental confusion, or one of a dozen other sickly states of mind. Having located your weakness, you should be able to remember it and guard against it. A book to aid you—Dr. Frank Channing Haddock's "Power of Will." Another—Dr. O. S. Marden's "Power of Personality." And a booklet—my own *Triumph of the Man Who Acts*.

184. Mrs. R. B. C., Michigan. "How can a radical and a conservative dwell in the same house? Almost every day our family is torn to pieces by the friction and dissension between the two strongest personalities in it, one being a zealot for all new ideas and beliefs, the other an adherent of old-fashioned ways. Enough energy has been lost here to build a ship; and my nerves can't endure the strain much longer. Is there any cure for such conflict of personality?"

Truth is a cure for anything. The radical is usually right in motive—being enterprising, brave, enthusiastic; but the conservative right in method—being logical, tactful, safe. Each has lessons for the other, can you not make them see this? The remedy for conflicting argument is cooperative action. Find some ground of mutual respect and belief, then plan to get the fighting brethren working here together, on a project to benefit the home, the community, or themselves. Disagreement drowns in a swift blood-stream of action. The best way to tighten a loose tongue is to tense a loose muscle.

185. Mr. J. B. W., Missouri. "Will you kindly suggest to me some efficient methods of building up a copious vocabulary?"

Get a good synonym book (such as James C. Fernald's *Synonyms, Antonyms and Prepositions*), take a leading editorial in THE INDEPENDENT, look up each adjective or verb in the book, see which of the synonyms given would apply to the sentence before you, which would not, and ask yourself why. Then memorize the list of synonyms or complete sentences containing each in its proper meaning.

When a sentence or paragraph strikes you forcibly, rewrite it, using entirely different words to express the same ideas, with the synonym book or an unabridged dictionary at hand. Read or borrow the works of masters of modern English style, as Shaw, Chesterton, Howells, Browning, Swinburne, and memorize a paragraph or a stanza each day, comparing their style and trying to approach the spirit of each in your thought, conversation, correspondence.

186. Rev. J. F. B., New York. "One of your followers, maybe in The Independent or in some positive [illegible]

If you have never used press clippings, drop us a postal and we will show how they can be of advantage to you. Write for booklet and terms.

ROMEIKE, INC. 106-110 Seventh Ave. New York City

mid-week service of our church. May I reprint it in our city papers, simply for the good it may do, with proper credit to the author?"

Congratulations on your endeavor to make the church service more practical. We shall be pleased to have clergymen use one of our charts for a mid-week meeting, as a blackboard lesson or otherwise, provided full credit is given both to THE INDEPENDENT and the author, and special permission obtained from the author in advance of the meeting.

However, we should prefer that your city papers do not publish any chart in full but merely quote leading points or questions, and refer to the issue of THE INDEPENDENT containing the complete chart. Much of the value of the chart lies in the context of the article, and the reader should have both, to be fair to himself and the subject.

---

187. Mr. W. C. M., Rhode Island. "With special reference to my son, seventeen years old and a student in our high school, I shall be glad to have your opinion as to the practical value of an examination by and advice of a good psychologist, particularly regarding a vocation. Can you recommend one in Boston?"

No system of character delineation has, to our knowledge, reached a plane of mathematical certainty. But examination and counsel by an expert psychologist or vocational specialist would be of great value. Apply to the Boston Vocational Bureau, and arrange for a consultation with Prof. Frank Parsons or with some one recommended by him. Many people consider Prof. Hugo Muensterberg of Harvard, an authority; we do not agree with all of his conclusions, but admire the brilliancy and force of much of his work in experimental psychology.

---

188. Mr. H. L., Indiana. "Am at present a salesman, but wish to take up a line of work which places one in a permanent location. Have become interested in Chiropractic, but wish to satisfy myself that it is not a passing fad. Is it permanent? Is there a future to it? I think of taking up a twelve or eighteen month course, and would ask your advice."

Are you naturally fitted to be a doctor? Healing is a profession, ministry and responsibility—not a mere dollar-drawing job. If you are not a born physician, you can never learn to be one.

The system of manipulation called chiropractic is now growing popular, but in our opinion is a specialty cure applying only to certain classes and causes of disease. I know a chiropractor who is said to make $300 a week—and I know others who are almost starving. Before you enroll with any school, write the American Naturopathic Association, 110 East Forty-first street, New York, for an impartial list of all the chiropractic schools, then obtain all their literature and compare.

A twelve or eighteen month course is dangerously, criminally inadequate. Study four years at the least before commencing practise.

---

189. Prof. T. S. B., Pennsylvania. "Is it possible to make a young girl wear hygienic, modest, sensible clothing, in spite of the current styles? Our daughter of eighteen is endangering her health, if not her morals, by wearing high-heel shoes, open-work stockings, gauze sleeves, and other extremes of modern dress. How can we prevent this folly?"

The only sure way would be to bribe the most fashionable dressmaker in your town to inform your daughter that sane clothes have become stylish. Another way would be to induce the most elegant society leader of your local "smart set" to wear wholesome garments for the sake of her influence and arouse emulation in the giddy head of your foolish child. Or, get fashion-books that observe health and decency—there are such things—and leave them carefully but nonchalantly around where the young ladyship will surely seize upon them.

---

190. Professor B., Minnesota. "I solicit your help. My weakness seems to be indecision. I am twenty-three years old, and a school principal. I am not successful as a disciplinarian. I cannot act promptly in a crisis. My efforts to instruct

Resinol Soap

gives natural beauty to skin and hair

Resinol Soap is not only unusually cleansing and softening, but its regular use gives to the skin and hair that *natural* beauty of perfect health which even the best of cosmetics can only imitate. Pimples, redness and roughness disappear, and in a very short time the complexion becomes clear, fresh and velvety.

The soothing, restoring influence that makes this possible is the *Resinol* which this soap contains and which physicians have prescribed for years in Resinol Ointment, in the care of skin and scalp troubles.

If the skin is in bad condition through neglect or an unwise use of cosmetics, apply a little Resinol Ointment and let it remain on ten minutes before washing with Resinol Soap.

Resinol Soap is sold by all druggists and dealers in toilet goods. For a trial size cake and miniature box of Resinol Ointment, write to Dept. 3-A, Resinol, Baltimore, Md.

the boys in better methods seem to fail. I keep cheerful most of the time, but my responsibilities bear too much on my mind. Inexperience hampers me. I should like to be a medical missionary, but hardly see my way to it. Have I missed my calling?"

You need *action*, and lots of it. Tennis, boxing, bicycling would make your mind more alert, with your muscles. Hire a lonely barn somewhere and in solitude learn to be a *leader* in some athletic sport. This will give you confidence, and immediately put you on a pedestal with the boys. Youth listens not to the man who talks, but to the man who does things. Get a sporting goods catalog, then get busy. Secure a copy of my booklet, *The Triumph of the Man Who Acts*.

Do you really want to be a medical missionary? Then you should be, and you can be. First, however, prove equal to the job you have!

---

191. Miss L. K. D., Virginia. "Do you consider efficiency man's supreme good and highest duty? Are there not circumstances under which the noblest type of man will sacrifice efficiency for a yet finer thing? Is it conceivably better to do a high thing imperfectly than to accomplish a low thing expertly? These questions are vital to me, and I hope you can answer them."

The true aim in efficiency is not manual dexterity or even mental force; it is rather moral vim, psychic adaptation, emotional control, spiritual freedom. We should study efficiency in order to make it a habit and forget it—not to make it a fetish and worship it. There are crises in every life, and the greater the life the more frequent the crises, when the soul can do nothing but pray—or weep and pray and weep again. It is a finer, bigger thing to work toward an ideal in obscurity, loneliness and sadness than to reach a material goal in triumph, while the multitude applauds. Be efficient if you can, for the exercize of your mental and moral powers; but be faithful to your vision, at any cost, no matter how little you achieve in the crude outer world.

PLAYING CARDS AND DOOR KNOCKERS

The origin of playing cards is lost in obscurity. They are generally assigned to the Orient, but they are now almost universal in currency and popularity.

The backs of old English cards were generally plain and thus it was that when paper was scarce or expensive, old cards were too useful to be destroyed. They were, on the contrary, used for various purposes. Thus they are often found in the bindings of old books, where they were preserved. The old cards were also sometimes cut up for paper dolls. They were also used as cards of invitation and as visiting cards. Thackeray refers to this in *Henry Esmond*.

The earliest examples of wood cuts were intended for playing cards. They antedate the famous St. Christopher wood cut that is sometimes credited with being the earliest.

In the olden days playing cards, instead of knitting, were used by spectators in playhouses as an amusement while waiting for the performance to begin.

Such widely differing materials as silken, leather, paper, wood, pasteboard, cardboard, porcelain and even metals like brass all have been used in making playing cards.

Door knockers were among the earliest forms, partly on account of their ornamentation. Both pretty and beautiful results were obtained from the use of this metal. Brass came into wide favor and has since remained the principal door knocker material, as no better substitute has been found. Bronze has been sparingly used.

The gadget knocker is sometimes found in use at the present time.

The [illegible] knocker is a related relic of many old houses. It was often made of wrought iron.

Charged [illegible] holding a dog of [illegible] face. One knocker still to be seen on the door of the Princess Pr. Johnson House.

PEBBLES

Railroad men certainly have their trials.—*Washington Post.*

Sherman omitted to go on record about neutrality.—*Wall Street Journal.*

The most unkindest cut of all seems to be located at the Canal.—*Columbia State.*

"Alpine scenery is very grand."
"Very durable, too. I imagine it will pull thru the war all right."—*New Idea.*

If we go in for preparedness, let us remember that the German Government also prepares against factory fires and *Eastland* disasters.—*New York Evening Post.*

A standpatriotic friend of ours says that the nation's most intelligently written weekly so gets on his nerves that he is tempted to call it "The Neuropublic."—*New York Tribune.*

"Do you know you're growing handsome, hubbie?"
"Yes; it's a way I have when it gets anywhere near your birthday."—*Boston Transcript.*

Colonel (of a very gallant Colonial regiment)—"Now, boys, here's the English general coming to inspect you. Keep steady, no spitting, and, for Heaven's sake, don't call me Alf!"—*Tatler.*

"You must learn to 'swat the fly,' Ethel. Flies carry typhoid fever."
"Will typhoid fever kill any one who gets it?"
"Certainly."
"But, Mother, why doesn't it kill the fly?"—*Life.*

"So you think a college education is a good thing for a boy?"
"Yes, I think it's a pretty good thing. Fits him for something in life. If he can't catch on with a baseball team, he can often land a job as a professor."—*Louisville Courier-Journal.*

It has always been a puzzle to some how the seeds may be transferred from the mouth to the plate when one is eating an orange. We would suggest a pea shooter as the best and most reliable solution of the difficulty. If so desired the seeds may be blown thru any convenient window or in any other direction desired.—*Penn State Froth.*

"Sam," said May Irwin to her negro butler, "do you mean to vote in New York on November 2?"
"Cose I mean to vote," Sam answered promptly.
"Well, what do you know about the Constitution?"
"Law, now, Miss May," said Sam, "you don't have to be a doctor to vote."—*N. A. W. S. A.*

Missionaries.—A writer in *The Charity Organization Review*, deprecating the way people talk of "the drab lives of the poor," repeats a story of some East-End girls who were taken down to Surrey to spend a summer day on a beautiful country estate. When their hostess was wishing them "good-by" she said she had much enjoyed their visit, and one guest replied cheerfully:
"I expect we have cheered you up a bit; it must be deadly dull down here."—*Christian Life.*

When a popular sea captain had died four leading men of the hamlet were selected to write an epitaph, and it was decided that each should write a line. The first wrote his easily. The second, puzzled a little, then he wrote his The third followed even more slowly. But the fourth wrote as if inspired and the whole verse read:

"Here lies the captain of the sea,
Here lies him, here lies he,
Hallaleujah, halleluee,
A. B. C. D. E. F. G."—*Harper's.*

Insurance

Conducted by

W. E. UNDERWOOD

ACCIDENT AND LIFE INSURANCE COMBINED

About twelve years ago a man who was not then directly engaged in the life insurance business, but who had served his time at it and continued to study it, conceived the idea that the accident and sickness disability risks assumed by accident companies could be combined with the risk against death in life insurance policies. On further investigation he found that the same idea had previously occurred to at least one other person, who, altho he possest the means of testing it in practise, permitted it to remain in the academic stage. The person I first mentioned made a rough draft of the scheme and laid it before an official of one of the medium-sized life insurance companies of New York City. This official was favorably imprest with the plan; but it involved such a radical departure from the regular routine of a life office as, in his opinion, would bring against it the opposition which all insurance directors and managing officials entertain for changes of a revolutionary character.

All branches of the insurance business, very properly, are conservative. Insurance cautiously feels its way; and with this fact in view, when one contemplates the tremendous changes which have occurred in fifty years, particularly in the life branch, one is struck with the vital spirit of progressiveness which lies beneath its conservatism.

But the idea of combining accident and disability benefits with life insurance possest life. It spread slowly and various forms of it were introduced in a small way by young companies struggling for a foothold. There is no doubt that the scheme will gradually take shape and reach comparative perfection. At present, such a contract is barred under the laws of most of the states, but there is no doubt that the embargo will be lifted when its practicability and soundness are fully established.

In this connection it was interesting to read the announcement recently made by a far western life insurance company of excellent condition and repute, to the effect that it was formulating a contract under which the policyholder was insured for a certain sum against natural death and twice that amount if death occurred thru what are called accidental means. In addition, the policy will provide benefits against natural and accidental permanent total disability and natural and accidental temporary disability.

This proposition probably marks the

Let your friends give you pretty trifles, but request that a *Bissell's Carpet Sweeper* head the family's gifts. If you already own this famous sweeper, tell them you want a *Bissell's Vacuum Sweeper.*

Then you will be equipped with the most efficient cleaning apparatus that can be installed in any home—*Bissell's Carpet Sweeper* for daily sweeping and a *Bissell's Vacuum Machine* for *suction cleaning* and general renovation.

BISSELL'S

Carpet Sweeper *or* **Vacuum Sweeper**

sell at moderate prices and make a *"Bissell's"* an economical gift. Bissell's Carpet Sweepers are $2.75 to $5.75; the Vacuum Cleaner (without brush) $7.50; the Vacuum Sweeper (with brush) $9.00. Slightly higher in the West, South and Canada. Sold by dealers everywhere. Booklet on request.

GOODELL & CO., Room 44, 158 E. 34th St., New York
Largest Mail Order Shirt House in the World

extremest limit which the combination plan has yet reached. I am inclined to the opinion that it will develop further, that it will be adopted by other companies; and that, in time, the accident companies will abandon the practise of granting death indemnities and will confine themselves to furnishing weekly disability benefits only.

T. N., National Military Home, Kan.—The Great Eastern Casualty is a good company. Some of its cheaper policies are restricted as to benefits. Its full priced policies are unrestricted and therefore more satisfactory.

E. B., Urbana, Ill.—No, I do not regard stock in a new life insurance company at two for one a safe investment. It is pure speculation. You would find it difficult (if you did not lose it finally) to get your money out of it.

W. T. P., Seattle, Wash.—Stripped of all its verbal superficialities you hold an assessment certificate under which you have never paid an adequate premium. The managers of the Association are powerless—they must advance rates or quit business. If you are not too old, get a policy in an old line, level premium company. Your rate will again advance for the assessment insurance later on.

H. A. T., Munich, N. D.—All I can offer respecting the Bankers Casualty Company of Minneapolis is that it began business in July, 1914, with $100,000 capital (succeeding the Bankers Mutual Casualty Company, an assessment association); that on December 31, 1914, its assets were $161,695; total liabilities (except capital stock), $19,653; net surplus, $42,042. Know nothing of its practise.

J. E. P., Jacksonville, Ark.—You omitted your age, necessary information under the circumstances. You inform me that you have $2000 for a quarterly premium of $5.91 during the first three years, when the rate diminishes to $3.38 per quarter for the remainder of life. This would be $11.82 a year per $1000 for the first three years and $6.76 a year thereafter. The premium is insufficient and you will have trouble with it in the future. For information respecting the company, see answer to E. K., page 207, The Independent of November 1.

P. A. S., Portland, Ore.—Your question can be satisfactorily answered in a general way. When a man takes a life insurance policy he is presumably making a long contract and one the provisions of which he may not live to see fulfilled. That being so, it is common sense that he take as few chances as possible respecting the sufficiency of the surety chosen. The best cannot possibly exceed his requirements. You have a well grounded doubt respecting the company named. Since you would never feel fully assured if you took it, why endeavor to resolve that doubt. For various reasons the company has not prospered as it should. It may in time overcome its difficulties. Who shall say to the contrary? But there they are at the present time. The matter is one which you must decide.

L. C., Sanders, Ky.—It is very difficult to differentiate the excellences of the various old and well established life companies, each one possessing virtues and advantages peculiar to itself. The company you are connected with ranks in the first class. I have little faith in the correspondence school in any line as a fountain of knowledge. In fact, except as one may develop it thru actual practise, it is my belief that the art of salesmanship cannot be acquired. It seems to be a natural faculty more or less highly developed at the start and perfected by experience. You are right in concluding that you should read some insurance journal and life insurance literature generally. There is no better man in the country to advise you in all these matters than your own manager of agencies. Write him fully.

This Inspiring Book Free

This intensely interesting and instructive 165-page book tells you of the great and increasing demand for lawyers and *how you can become one.* It tells you why law trained men are now selected for most positions of responsibility in business, public life and social work—and *how you can grasp these opportunities.*

It shows you how you can become law trained in **spare time at home** by a method [illegible] endorsed by [illegible] throughout the country, in whose opinion you have the **utmost confidence.**

Modern American Law Course and Service of

BLACKSTONE INSTITUTE

Blackstone Institute, including The [illegible] Correspondence School of Law, [illegible] trained more than thirty thousand men and women in law. Among our graduates are the Governor of a State, United States Senator, Congressmen, State, County and City Officials, many Judges and **thousands of successful Lawyers and business men everywhere.** This notable record extending over more than twenty-five years is the most convincing evidence that we **produce results**—and it is results that count.

Chief Justice Ladd of the Supreme Court of Iowa, says:

"Every person interested in the law will receive from Blackstone Institute an unusually excellent—in fact, *the best*, non-resident system of instruction."

The Course has been prepared **especially for home study** by eighty eminent judges and other authorities. It is clearly written in simple, non-technical language, easy to read and understand. Preliminary education is not necessary. You will benefit from the day you start.

THE MARKET PLACE

A REVIEW OF FINANCE AND TRADE

THE INVESTOR'S SERVICE

The Independent is now offering a Service for Investors which will give personal attention to the desires of its subscribers for information in regard to investments of all kinds. We cannot of course decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write to us frankly and this Department will give them by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves.

THE FARM MORTGAGE AND THE INDIVIDUAL INVESTOR

BY JAMES R. MERRIAM

DEVELOPMENTS in the American security market since its "reopening" a year ago last month after many weeks of almost complete paralysis following the outbreak of the war, have been of the most extraordinary character.

It will be recalled with what gloomy expectations of dwindling values for the standard classes of investments, business on the principal exchanges of the country was first resumed; and with what anxious care it was long conducted.

It will go down as one of the most remarkable chapters of all financial history with what rapidity those earlier fears have given way to confidence and hope. But it is essential for prudent investors to consider that these changes have been accompanied by security movements which demonstrate in a peculiarly striking way the wisdom of disassociating some part, at least, of one's capital from the complications that surround the business of the open marketplace.

It is timely, therefore, to discuss briefly the type of security that is everywhere recognized as the staple for income investment; namely, the first farm mortgage.

The farm mortgage has shared with practically every other class of investment securities the fate of having been once cast from respectable estate by the methods of the adventurous boomtime promoter. The period of rapid settlement and development of the Western plains between 1879 and 1890 was marked by much notorious extravagance in mortgage making. Collapse inevitably followed.

However, with the inauguration of system in placing loans, there began an era of careful and conscientious banking which soon restored the farm mortgage to high and justifiable favor among conservative investors; and it now stands with a record of more than twenty years of proven dependability in its return of interest and principal, without a peer in this respect in any other line of investment.

For this renaissance, the life insurance companies are largely responsible. They are today the largest lenders on the security of the farm mortgage, holding, as recent statistics have shown, well over a quarter of the total outstanding amount of such investments, or roughly between $600,000,000 and $700,000,000

From a study of their experience a number of important general rules governing the selection of the mortgage are readily derived.

(1) That preference should be given to loans on lands occupied by owners, or to loans on lands occupied under long term lease.

(2) That preference should be given to loans on lands located in areas having abundant and dependable rainfall, or in those where irrigation is successfully established and practised.

(3) That preference should be given to loans on lands in sections where agriculture is diversified.

There are some localities in which peculiar conditions are found to create exceptions to these rules, but taking the country as a whole, they will hold uniformly good. And the territorial limitations which they indicate are fairly accurately shown by the distribution of insurance company loans principally among the following states: Iowa, Kansas, Missouri, Nebraska, Illinois, Indiana, Minnesota, Oklahoma, Texas, South Dakota, North Dakota, Ohio, Georgia, Tennessee, California and Kentucky.

But to determine the underlying factors of safety in the mortgages themselves, a study of the painstaking manner in which these large institutional investors execute the details of their loans is necessary.

There are in general four elements of security to be determined in connection with every mortgage investment, namely, present value of the land, conditions making for stability of value, moral hazard, and conditions of mortgage. Experience has shown that the first of these can be scientifically determined, that the second and third can be determined with enough definiteness to meet every practical requirement, and that the fourth depends upon the care and skill with which the necessary legal papers are drawn up.

The systematic way in which the determination of these factors is nowadays approached can be but vaguely suggested here by reference to a few of the more pertinent questions which prospective borrowers are required to answer in making application for their loans. There are, for example, questions intended to bring out minute description of the property, quality of the soil, and general surroundings, all with a direct bearing upon income value, as distinguished from sale or speculative value; and questions about such things as the finances of the borrower, his family, his health, habits and general reputation in his community, his record in previous activities, all intended to bring out the material facts which would ordinarily contribute to his success or failure.

With these details carefully checked thru their organized forces of field experts, and with titles abstracted and matters of insurance and taxes attended to by the most skilled legal talent, it is little wonder that the insurance companies have few foreclosures and practically no losses on this class of investments, made as they usually are on a basis of 40 to 50 per cent of real value.

"But," the uninitiated will say, "how impossible for the individual investor to loan on the security of the farm mortgage under such safeguards. Not at all. For there are in every desirable loan field reliable and experienced mortgage bankers whose business it is to perform these services for their clients, and in addition to supervise the investments for which they stand sponsor thruout their entire existence, collecting and remitting interest and principal when due,—in fact sparing the lender all contact with the borrower.

It is, in the final analysis, more often a strong than a weak feature of a mortgage that it is permanent until it becomes due. But, while its life is relatively short—about nine and a half years on the average—it not infrequently becomes subject to sudden contingency in the hands of its holder. Such situations, the more resourceful mortgage bankers are nowadays able to handle with satisfaction to their clients, either by repurchasing a reasonable amount of their mortgages at a slight discount to cover handling charges, or by loaning on such mortgages as collateral.

Practical steps have also been taken by many of the reputable bankers to make the farm mortgage available to the relatively small investor. A few years ago the man with less than $1000 to invest sought in vain to find a place to loan his money on approved security in this category. Now, however, it is

Are Your Bonds Dependable?

Were they intrinsically as strong during the recent period of severe depression as at the crest of a period of general prosperity? Have the earnings of the companies whose bonds you hold been consistently sustained and substantially increased each year regardless of existing conditions?

We Have Had Twelve Months of Severe Test

If you use the record of this test as a guide in making your future purchases, it will aid you greatly in the selection of really sound bonds.

If you are interested in dependable investments of conservative but attractive return, we shall be glad to make offerings in accordance with your requirements.

Send for our circular I-11 "DEPENDABLE BONDS"

not unusual to find the straight mortgages themselves with strong sponsorship in denominations as low as $200 or $300. And farm-land bonds of excellent quality may be had from a number of reliable firms in denominations as low as $100.

SEEKING FOREIGN TRADE

There was organized and incorporated in New York last week a company named The American International Corporation, which justly excites much interest both at home and abroad. It was formed under the direction of our greatest bank, the National City, which recently established branches in South America and has acquired control (thru its investment subsidiary, the National City Company) of the International Banking Corporation and the latter's sixteen banks in China, Japan, India, the Philippines, Panama and other parts of the world. The purpose of this new company, capitalized at $50,000,000, is to develop American trade with foreign lands, promote the investment of American capital in foreign industries and projects, and make markets abroad for American products. It proposes to carry American funds to any foreign field in which they can be used profitably. The great strength of the company can best be shown by the names of its officers and directors.

President—Charles A. Stone, of the Boston firm of Stone & Webster, long prominent in connection with traction, gas and electric lighting companies.

Vice-President—Willard D. Straight, recently of the house of J. P. Morgan & Co., who has an exceptional knowledge of the Far East.

Secretary and Treasurer—R. P. Tinsley, recently treasurer of the Standard Oil Company.

Chairman of the Board—Frank A. Vanderlip, president of the National City Bank.

Directors—James J. Hill, of the Great Northern Railroad Company; Percy A. Rockefeller, of the Standard Oil Company; Charles H. Sabin, president of the Guaranty Trust Company; Theodore N. Vail, president of the American Telephone and Telegraph Company; Otto H. Kahn, of the banking house of Kuhn, Loeb & Co.; J. Ogden Armour, of the packing house firm of Armour & Co.; A. H. Wiggin, president of the Chase National Bank; Charles A. Coffin, head of the General Electric Company; Robert S. Lovett, chairman of the Union Pacific Board; William E. Corey, head of the Midvale Steel Company; Robert Dollar, of the Dollar Steamship Company; Ambrose Monell, of the International Nickel Company; John D. Ryan, of the Anaconda Copper Company; James A. Stillman, of the National City Bank board; William L. Saunders, of the Ingersoll-Rand Company; Henry S. Pritchett, of the Carnegie Foundation; James P. Cotter, of W. R. Grace & Co., engaged in South American trade; Edwin S. Webster, of Stone & Webster; Beekman Winthrop, of Robert Winthrop & Co., Guy E. Tripp, chairman of the Westinghouse Electric and Manufacturing Company.

This is an impressive list. Of the $50,000,000 capital stock $1,000,000 is set aside for officers and active managers, and this $1,000,000 is to receive 20 per cent of the profits remaining after the payment of a 7 per cent dividend on the $49,000,000. The company's charter is a very broad one, covering

ing the corporation to deal in securities, acquire concessions, make explorations, develop mines, smelt ores, build houses and factories, construct telephone and telegraph lines, make wharves and reservoirs, and, in short, to do anything which it may desire to do in pursuit of its purpose. While there will be an attempt to introduce here certain foreign securities not now well known to American investors, the company will also seek to satisfy them by issuing and offering its own debentures, based upon foreign securities but supported by the corporation's great strength. It may be that a beginning will be made in South America and Russia. The entire movement, which promises to be of notable service to American interests, is due mainly to the war, which witholds European capital from countries that have relied upon it. Several of these countries are seeking aid here. This can be given by the American International Corporation in ways that will be beneficial to our manufacturers and investors.

EXPORTS STILL GROWING

There were indications, as we said last week, that the forthcoming official report would show for October an excess of exports over imports even larger than the previous high record of $174,682,478, in February, altho September's excess had been only $146,000,000. The report, which has since been published, points not only to an excess, $186,108,958, which is the largest ever known in the history of our foreign trade, but also to a volume of exports, $334,638,578, never before equaled. These figures for October have given the Treasury Department an opportunity to direct attention to the fact that our foreign trade, both imports and exports, in the twelve months that ended with October exceeded five billions ($5,010,382,000), a total never before reached in a year. Comparison with the twelve months immediately preceding shows a loss of $188.-000,000 in imports, with the great export gain of $1,177,800,000. Returns from the principal ports for the first three weeks of November show that this month's report excess may even surpass October's.

The twelve months' excess on the export side is $1,626,886,623. It is impossible to show by any exact record how or to what extent this balance against foreign nations has been met. A part of it may be accounted for by our imports of gold, the net amount of which in the twelve months was $326,-428,000. This may be compared with net exports of $167,193,000 in the preceding twelve months. Here is seen a great change in the gold movement. There should also be counted the American securities formerly held abroad which have come back to us, and the proceeds of foreign loans and credits procured here.

The following dividend is announced:

Brooklyn Rapid Transit Company, quarterly, 1½ per cent, payable January 1, 1916.

What Your Handwriting Reveals

HERE'S a booklet of 32 pages which tells all about the traits of character and kinks of temperament indicated by handwriting. It is written by William Leslie French, the famous Graphologist, and it interprets fifty typical examples of penmanship. You will probably find your style among them. You can obtain a copy with 12 different patterns of Spencerian Steel Pens for 10 cents. Send at once—a new edition (limited) is just off the press.

Good men, whether experienced in life insurance or not, may make direct contracts with this Company, for a limited territory if desired, and secure for themselves, in addition to first year's commission, a renewal interest insuring an income for the future. Address the Company at its Home Office, No. 277 Broadway, New York City.

Get the Saving Habit

The habit of saving has been the salvation of many a man. It increases his self-respect and makes him a more useful member of society. If a man has no one but himself to provide for he may be concerned simply in accumulating a sufficient sum to support him in his old age. This can best be effected by purchasing an annuity as issued by the Home Life Insurance Company of New York. This will yield a much larger income than can be obtained from any other absolutely secure investment. For a sample policy write to

HOME LIFE INSURANCE COMPANY
Geo. E. Ide, President.

Atlantic Mutual Insurance Co.
Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842 was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of	$27,964,578,109.00
Received premiums thereon to the extent of	287,324,890.99
Paid losses during that period	145,829,874.99
Issued certificates of profits to dealers	90,801,110.00
Of which there have been redeemed	83,811,450.00
Leaving outstanding at present time	6,989,660.00
Interest paid on certificates amounts to	23,020,223.85
On December 31, 1914, the assets of the company amounted to	14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

TO ARM OR NOT TO ARM

WOODROW WILSON—Ezekiel, 33, 2-6.

THEODORE ROOSEVELT—Ezekiel, 33, 2-6.

WILLIAM H. TAFT—Our coast defenses are practically complete and impregnable.

WILLIAM J. BRYAN—For what is the United States to prepare itself?

JOSEPH H. CHOATE—We could not keep invaders out a day.

MRS. WILLIAM ALEXANDER—It is incumbent upon the women to aid in obtaining adequate national defense.

SENATOR STONE—We want a navy strong enough for offensive action.

SENATOR WEEKS—There should be no partizanship on the matter of preparedness.

SENATOR NORRIS—A preparedness germ has swept the country.

SECRETARY MCADOO—If we are to have adequate naval preparedness we must have an adequate naval auxiliary in the form of a merchant marine.

CONGRESSMAN BAILEY—There is more sentiment among members of Congress in opposition to the proposed program than I had suspected.

SIDNEY BALLOU—We are prepared against any nation on this hemisphere, yet it has not brought war with any of them.

SENATOR LEWIS—How is the money to be raised?

SENATOR PHELAN—If war is hell, then preparedness is religion.

MRS. CHARLES VAN RENSSELAER—We women want peace, and we believe adequate defenses will preserve it.

CARDINAL GIBBONS—The way to secure proper preparedness is thru the state militia.

ROGER W. BABSON—War can be avoided only by complete world organization.

SECRETARY DANIELS—Unless we keep adding to our fleet we cannot enter an international conference to end the building of great fleets.

OSCAR T. CROSBY—In preparing as we now plan we are going to be the next menace to the peace of the world.

CHAUNCEY M. DEPEW—New York could be seized by a hostile force without much difficulty.

CLARK BELL—Providence will watch over this worthy nation.

PRESIDENT CROTHERS—There will be no more war for fifty years.

CHAMP CLARK—The American people want preparedness without bankruptcy.

CONGRESSMAN KITCHIN—I will use all my power to defeat it, but I believe the President's program will go thru by an overwhelming vote.

HENRY FORD—Preparedness leads to war—causes it, dares it, urges it on.

CLARK HOWELL—Sentiment in Georgia is overwhelmingly in favor of the President's position.

NEW YORK EVENING SUN—The danger lies in the ability of the Bryan-Kitchin combination to control more than the Democratic margin in Congress.

NEW YORK TIMES—The implication of setting a watchman to blow a trumpet in case of danger is that those thus awakened should have arms with which to defend themselves.

INDIANAPOLIS NEWS—That old saying about "billions for defense" looks as if it were going to work out in real life.

TOPEKA CAPITAL—It is not a defense campaign at all, but a campaign for the creation of an offensive military Power.

PHILADELPHIA EVENING LEDGER—Whatever error there is in the program is on the side of conservatism.

GALVESTON NEWS—Neither did the Armenians believe in preparedness.

SENATOR PENROSE—A dreadnought for every state.

SALT LAKE TRIBUNE—Willingness to fight for one's country is not militarism any more than putting the nation in a state of defense is militarism.

THE BELLMAN—The expenditure next year of $400,000,000 seems to those who have not been seriously bitten by the preparedness bug a considerable sum.

NEWARK NEWS—The Garrison "Continental" proposal is worth a try-out.

OMAHA BEE—The President's sudden zeal for preparedness is a confession that all these years the Democratic party has been wrong in opposing an adequate army and navy.

KANSAS CITY TIMES—China has found that to influence by example rather than by exciting fear has not worked.

NEW YORK JOURNAL OF COMMERCE—There is no more occasion for getting excited over national defense than there had been for years before this war.

RICHMOND TIMES DISPATCH—Taxpayers are entitled to a frank discussion of what the object of preparedness is.

WILMINGTON EVERY EVENING—If the world were composed entirely of William J. Bryans there would be no need of defense preparations, but it isn't.

NEW YORK TRIBUNE—The President's views regarding the army to be created are inadequate.

PHILADELPHIA INQUIRER—The plans should contemplate greater rapidity of naval construction.

DETROIT FREE PRESS—President Wilson's doctrine, as we get it, is to believe in the best and be prepared for the worst.

NEW YORK SUN—The administration should make it clear that it will not accept a plan which includes conscription.

SAN FRANCISCO CHRONICLE—Even the militarist can quote Scripture to his purpose.

FLORIDA TIMES-UNION—Unless Congress give us a properly balanced system it had better refuse to empty the national treasury.

CONGRESSMAN GARDNER—The time to build our navy is now, even if the officers and men to man it are not in sight.

ASHEVILLE CITIZEN—Congressman Kitchin should give to the President's arm its main support.

CHARLESTON NEWS AND COURIER—Most of the signs so far visible point toward preparedness.

NEW YORK WORLD—Mr. Wilson indulges in no glorification of force for force's sake.

MILWAUKEE JOURNAL—Our first line of defense must be our fleet.

BROOKLYN EAGLE—Dreadfully expensive, but a basis for discussion.

INDIANAPOLIS TIMES—Make our common country strong for honorable enforcement of peace.

Ireby in New York World

JUST A WORD

The Independent has recently published two articles dealing with the amazing development of the automobile industry of this country and the great opportunity now before American manufacturers in foreign markets. A third article by the same author, Bronson Batchelor, "Buying the Ultimate Car," analyzes present tendencies in automobile buying and reports the great advances made in the last few years in intelligent purchasing and efficient manufacturing. Definite information about the present-day cost of running a motor car will make the articles especially valuable.

An article by Philander P. Claxton, the United States Commissioner of Education, soon to be published in The Independent, will discuss at some length the problems of *Educating a Nation.*

The case of *The People vs. King Alcohol* is now being tried in many parts of this country. A symposium of opinion on prohibition will be published in an early issue of The Independent and should form the basis of much intelligent discussion on the subject.

In a clever satirization of international complications abroad Preston Slosson considers the question *If We Were Europe* and points the way to world peace with the United States to set the good example. Readers of The Independent will be interested in the comparisons he draws.

IN THE GOOD OLD WAY

(One of Br'er Williams' Faith-Songs.)

Spite er all de a'rships
Dey riggin' up today
I gwine ter go ter glory
In de good ole way!

W'en the mo'ners is a-sighin'
At de partin' er de day,
I'll fix my wings fer flyin'
In de good ole way!

Halleluia story—
Frum de fur away,
Gwine ter go ter glory
In de good ole way!

—Frank E. Stanton, in *Atlanta Constitution.*

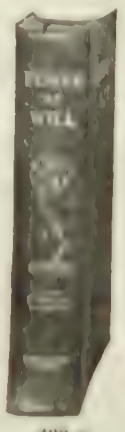
Power of Will Makes Dreams Come True

Send No Money—Examine Book Free



Will Power, properly cultivated and directed, is the driving force behind your brain that turns empty air castles into happy realities. No man since the world began has ever achieved anything worth while without an inflexible will.

What do you want most in life? Money and all that goes with it? Reputation, Prestige, Power? Greater mental and spiritual happiness? Better self-control? More confidence in yourself? Whatever you want—whatever you have dreamed about some day having—can be yours, if you will only train your will as thousands of others have done with unfailing result.

Your Will Needs Practice

If you should stop work for two years and have no occasion to use your brain in solving business problems, you would gradually become unable to use it as you do now, simply from lack of practice. It's continual practice that makes it possible for you to arrive at quick decision and enables you to [illegible] problems. And you'd be surprised how [illegible] gift would leave you [illegible] out of the habit for a few years.

The same is true of the Will. Because we don't use it we don't know it. Most of us [illegible] carrying out other people's wills [illegible] because we [illegible] lack of use. Your Will is [illegible] and by the very [illegible] to [illegible] exercise and use.

"Power of Will"

by Frank Channing Haddock, Ph.D., a practical book [illegible] Haddock [illegible] Power and Inspiration to the Will [illegible] Will [illegible] Will [illegible] Will [illegible]

Some of the 75,000 "Power of Will" Owners

A list of owners of "Power of Will" reads almost like a list of "Who's Who," and they speak of it as a Bible. They include hundreds of successful business men, statesmen, government officials, writers, physicians, thoughtful men and women in every field of work—in every town and city in the country, and as the news spreads the number grows daily by leaps and bounds.

Master-men like Judge Ben B. Lindsey; Supreme Court Justice Parker; Wu Ting Fang, ex-Chinese Ambassador; Asst. Postmaster General Britt, General Manager Christenson of Wells Fargo Express Co.; [illegible] Lewis, now Vice-President Art Metal Construction Co. and Frank K. [illegible], Asst. Attorney General U. S. are among those who write [illegible] and praise "Power of Will."

methods and rules set down with noticeable results almost from the very start.

May Transform Your Life

The users of "Power of Will" have experienced results through its study which border on the miraculous—it has enabled thousands to win out with big plans which they had worked on unsuccessfully for years—it has made active men of affairs out of pitiable down and outs—it has transformed those who had always been the pawn of others into self-confident powerful leaders—it has enabled men and women held down by petty fears—by trivial daily incidents—to break them aside as though made of papier-mache—it teaches self-control—control of appetites and desires and it has enabled strong, successful men by the [illegible] to accomplish greater things for giving them even greater power to use in their dealings with others.

No matter what your ambition in life—no matter what you are—"Power of Will" can help you by giving you the power to become the dominant factor in your every undertaking—by enabling you to make those with whom you come in contact work for your ends instead of your doing as with them, what is usually expected. It teaches you to so control your own actions that you can be confident whatever you set out to do will be accomplished. It literally makes [illegible] of "Power of Will" [illegible]

QUIXOTIC

WHEN the Knight of the Rueful Countenance set out on his adventures, a grotesque figure in makeshift armor mounted on a rackabones nag, he made a valuable addition to the world's vocabulary. Quixotic has been a widely useful word ever since.

But those who have looked upon the word as a mere epithet of ridicule, with no thought for a finer connotation, have sadly misread their Cervantes. Don Quixote is a ludicrous figure. But at the heart of his absurdities there burns a clear flame of deep spiritual conviction.

The expedition of Henry Ford and his hundred and fifty associates on the good ship "Oscar II" is undeniably Quixotic. It is impractical, visionary, maladroit.

But it is not insincere. Its heart glows with a bright warmth of devotion to a high ideal.

Quixotic in every sense of the word.

A FORGOTTEN VIRTUE

IF necessity is the mother of invention, war is the despotic dictator of economy. It might be difficult to determine, as a fact of social evolution, whether droughts and crop failures or the thousands of wars with which the human race has occupied itself, have been more effective in disciplining man in the habits of frugality. Probably war has played the larger part. Because in war the individual is not only constrained by the great impersonal forces which he fails to understand, but also by the commands and exhortations of personal superiors whose will he is accustomed to obey.

In every one of the warring nations their governments, churchmen and writers are commanding and preaching a rigorous economy. How urgent the need may be to remind the people of this duty in Germany, in Russia, or in France, the American onlooker is unable to guess; but in England the facts are sufficiently plain to convince the common-sense mind that a good deal of conscientious effort is called for. Sir Gilbert Parker, for example, has recently published a frank piece of chiding, in which he reveals the persisting recklessness of that rich and vulgar element in the population which supports the watering places and gives business to the manufacturers of the goods of ostentation. Sir Gilbert says in effect that these people, after a year and a half of war, are still conducting themselves in the old fool ways. Also, he says something else which is really more interesting. Too many English people that feel an obligation to economize and try to do it, do not know how. They make a great point of saving sixpences and shillings in bus and cab fares, perhaps, but show inability to organize their households and to regulate the more important matters of personal expenditure.

Possibly Sir Gilbert would not care to go too deeply into the causes of failure, but it cannot be supposed that so keen an observer of individuals and peoples is under any misapprehension in his own mind. The difference between the English and the French psychology in these matters was never better put than by Professor John Erskine the other day, when he explained the English reaction to pretty nearly everything by English satisfaction with the maxim,

"Be good, dear child, and let who will be clever."

The English have, in fact, taken altogether too much content in their habit of "blundering thru," which they have relied on too far in peace, as in war; in the household, as in Downing Street. There is no better brain stuff in the world than in the solid British skull, but it has long needed a new set of exercizes and habits. It is getting them.

If thru the bitterness of war the English people learn the lesson that the days of "blundering thru" are over, and that from this time forth nothing will "go" in western civilization which is not surcharged with intelligence, their new taxes and their new debt will not be an unreasonable price for the education.

This aspect of the "war and frugality" combination seems to us more fundamental and far more important than the so-called moral aspect. In days of stress the proclivity of mankind for good resolutions always manifests vitality. Sir Gilbert is right in believing that failure and discouragement and the relapse into old ways are attributable chiefly to a sad lack of "know how." When all is said, there is strangely little proof that the heart of man is vastly better in these years of so-called civilization than it was in the ages of barbarism. Possibly the intelligence of man has not been much augmented either. But the application of intelligence to practical affairs, little and big, has made all the difference between the rudeness of the steppe and the attainments that are symbolized by the banks of the Seine and of the Thames.

Quite as much as the peoples of Europe, the people of the United States need awakening to the imperativeness of the old-fashioned virtue of thrift. And, like our English kinsmen, they need to perfect themselves in it thru

a new application of intelligence. The fur dealers say that never in the history of their trade has there been such expenditure for costly skins as there has been in the last few weeks by "ladies" whose husbands were strangers to wealth until the war-munitions' stocks gave them the fortune of luck. The philistinism of these persons is by no means a mere matter of indifference to things worth while. It is much more a matter of ignorance. Their children and their children's children will strive mightily to erase the first chapter of prosperity from their family history.

The lesson of it all, for us as for Europe, is simple and clear. Impart, if possible at least a touch of cleverness to the dear child's goodness.

THE FALSIFICATION OF THE NEWS

A FEW Sundays ago a great mass meeting was held in this city to protest against the most terrible crime of the century—the murder of the Armenian race. The theater was filled with many of New York's most influential citizens. On the platform sat distinguished representatives of the Protestant, Roman Catholic and Jewish religions. Probably never before in New York at a public meeting were more piteous and soul-stirring things revealed. After the addresses, just as the resolutions were being put, a man in the audience rose and attempted to make a speech. A slight commotion followed and, altho the chairman called upon the ushers to desist, he was not heard, and the offending member was put out. It was such an occurrence as might have taken place at any meeting and was of no conceivable importance to anybody but the man removed.

Not so, however, in the opinion of the journalists present to report the meeting. The next morning *The World, The Sun, The Herald* and *The American* featured the commotion and the necessity of putting out one man, and devoted only a fraction of their valuable space to the true report of the meeting and the massacre it was called to consider.

Not many days ago a couple came to one of New York's best-known clergymen to be married. When he found out that both had been divorced, one of them twice before, he refused to perform the ceremony. The New York *Sun* the next morning conspicuously reported the event, stating that the ceremony was performed by the Rev. Dr. Charles E. Jefferson, whereas it was actually performed by a justice of the peace. No answer was vouchsafed to Dr. Jefferson's subsequent letter of protest to *The Sun.*

Two weeks ago a great financier of this city delivered an address on the Peace movement that for eloquence and philosophical insight has not been surpassed during the war, in the opinion of many of those who heard it. It was given over a column and a half of space the next morning in *The Times,* and, altho only eight lines of the speech were devoted to a mere statement that the speaker believed in adequate national defense, *The Times* announced "Kingsley Urges the United States to Arm Now" as the headline on the first column of its front page.

On Thanksgiving Day the twelve hundred clergymen of Greater New York preached sermons. *The Times* published the next morning nearly two columns of extracts from them. "Thruout the sermons," said *The Times,* there was an almost universal note in favor of military preparedness. The exception was at Broadway Tabernacle, where spiritual and moral preparedness was favored." This last sentence is a mistake, Preparedness of any kind was not mentioned at the Broadway Tabernacle. The sermon was entirely on gratitude. But let that pass. Eleven sermons were quoted in *The Times* report. Of these eleven, three seemed to urge some sort of military preparedness for the United States. The others opposed preparedness or had nothing to say on the subject. The headline artist of *The Times,* however, thus summarized the sermons:

PREPAREDNESS FROM MANY PULPITS
THANKSGIVING SERMONS JUSTIFY WAR FOR DEFENSE OF AMERICAN LIBERTY AND IDEALS

And this is the way that the foremost papers of America dish up the news to us day after day!

THE TYRANNY OF THE MINORITY

WITH the assembling of a new Congress the question of the respective rights of the majority and the minority in the Senate pops up again. The rules of the Senate permit a recalcitrant minority, no matter how small, to obstruct a given piece of legislation just as long as the determination and the physical endurance of its members hold out. Each measure must be debated until every senator who wants to speak on the subject has been heard. In the Senate the cloture is unknown; there is no such thing as the previous question. The time of voting upon a bill and the duration of the debate are fixed not by the will of the majority but by the whim of the minority.

This is a sheer absurdity. In a representative assembly the majority ought to rule. Unless it does, the popular will is thwarted. It is the essential function of a representative assembly to record, as nearly as may be, the popular will.

This rule of the majority, it is true, sometimes leads to something like tyranny. But the tyranny of a majority is better than the tyranny of a minority.

The present rule of the Senate is ridiculous. It makes a tyrant of the minority. It ought to be changed.

OUR OPTION ON NICARAGUA

THE news that Canada has obtained a concession for an interoceanic railroad across Nicaragua reminds us that there is a bit of unfinished business on the table of the United States Senate which has remained unfinished altogether too long. As soon as Congress assembles it should proceed at once to pass the treaty which has been negotiated with Nicaragua giving us the exclusive right to construct a canal thru that country. It is not fair to Nicaragua to leave the matter longer in suspense. We have no right to play "the dog in the manger" with these central American states. If we neglect to avail ourselves of the opportunities they offer us we should give way to some more enterprising people who are willing to develop the country, be they Canadians, Germans, Japanese or any other.

We should remember that in January, 1902, the

House of Representatives voted by 223 to 25 to authorize the construction of a canal at Nicaragua at an expense of $180,000,000. This was the estimate of cost made by the engineers and experts of the Third Canal Commission, which recommended the Nicaragua route in preference to the Panama. We may suppose that they underestimated the cost of construction in the case of the Nicaraguan plan as they undoubtedly did in the case of the Panamanian plan. But with the lesson learned from Panama and with improved machinery for excavation it is quite possible that some time a canal may be constructed for some such sum at Nicaragua, and if so its tolls could be less than half those of the Panama Canal, for that has cost us about $400,000,000. It may be that the much dreaded earthquakes of Nicaragua would not prove to be worse than the landslides of Panama.

At any rate, we should hasten to take up the option on the Nicaragua route now offered us. It may be our last chance, for we hope that our commercial rivals in Europe will never again be so short of cash and so preoccupied with other matters as they are at present.

A NEW TRADE COMPANY

THE officers and directors of the new American International Corporation are a remarkable group of men who have set out to take advantage of a trade opportunity offered to the United States by the Great War. There are neutral countries which have relied for many years upon European capital for the development of their resources. It is estimated that England's investments in South America have amounted to $4,000,000,000 and that half as much has been placed there by Germany and France. Not only have these European sources of supply been closed by the war, to remain in that condition for a long time to come, but the investors are now withdrawing their money because Europe sorely needs it. And the embarrassed nations are turning for help to this country, where money paid by the belligerents for munitions and our abundant crops, will seek profitable investment. In the other hemisphere there are countries which Europe can no longer assist, and the close of the war will find Russia seeking American capital and skill for the development of her industries and natural wealth.

This opportunity has appealed to the Americans who have organized the new company, Americans widely known by reason of their success and prominence in connection with great industries, our railroads, our foreign trade and our banks. They are men of recognized power. They themselves are familiar with the processes by which natural resources are developed, or they control the services of the ablest experts in their fields of industry. Their own achievements inspire confidence. They are aided by a chain of financial institutions here and abroad. The company is an association of men admirably equipped for its purpose.

Its aim is to take up the work which the warring nations have put aside, and thus not only to enlarge our foreign trade, but also so to extend the influence of the United States that the gains will be retained and will grow in the years following the war. When it asks for the support of the American public it will offer the guarantees to be found in the careers, wealth and associations of its officers and directors. The course of the project will be carefully observed in other parts of the world as well as in our own country, for whose interests it promises to exert an enduring and distinctly beneficial influence.

CURSED ARE THE PEACE-MAKERS

THE blessing which is promised to the peace-makers obviously refers, as in the case of other beatitudes, to the rewards of a future world, not of this. For in this world those who attempt to stop a quarrel usually get into trouble with one party and often with both. That must be expected, but it does not relieve any one from the duty of doing whatever he can to make peace.

The Russians and the Japanese had fought each other to a standstill when President Roosevelt intervened. The war might well have continued for a year longer without accomplishing anything more than the greater exhaustion of the belligerents. Yet both sides blame Mr. Roosevelt for having by his intervention snatched victory from their grasp. The Russians claim that if he had let them alone a little while longer they would have driven their enemies from Manchuria. The Japanese claim the same.

We believe that before long the President of the United States will again feel it his duty to act as intermediary in a great war. We hope he will seize the first favorable opportunity to proffer his services in that capacity. But we are sure that whenever he does he will be denounced on both sides as a meddler, and if he is instrumental in hastening the conclusion of a peace he will be blamed by both sides for preventing them from gaining the completer triumph for which they hope. Whichever nation feels most anxious for peace will, as a matter of policy, be the loudest in denouncing any suggestion that the time has come for the war to stop. The terms of peace, whatever they are, cannot completely satisfy any of the belligerents, and their dissatisfaction will be vented upon the intermediary. So if America has any part in the making of peace we must not be disappointed if from all sides we get, not gratitude, but obloquy and animosity.

THREE COLLEGE PRESIDENCIES

A PRESIDENCY is a high ambition, whether of a corporation, a college, or the country. Few candidates decline and fewer resign except for age or on demand by dissatisfied trustees. Within a few weeks much interest has attached to changes in the direction of sevtral important educational institutions which have required the finding for them of new presidents.

Dartmouth College is one of the oldest in the country. It was founded for the purpose of giving education to American Indians, but the red men have past away and it is rare that one appears to demand free tuition. After six years of service, President Nichols has resigned, greatly to the surprize of the friends of the college. Following a succession of clergymen as presidents, he was chosen as a layman and a distinguished investigator in science. Under him the college has rapidly grown in the number of its students and his resignation is deeply regretted. He resigned to become head of a department in physics at Yale University. It might seem a step downward in grade, but we can well imagine he

should be glad to make the change. About a college presidency there is more honor and glamor than enjoyment. A president's work is mainly administration, too often the collecting of money; he has little opportunity for teaching, too little professional influence over individual students and no time for investigation and study. To a student like Dr. Nichols, who so well knows the problems in physics awaiting discovery, the work of administration must be a weariness. He has done what seemed immediately necessary to raise the department of science at Dartmouth, and he now goes where he can give his time and genius in the laboratory, adding something of value to the knowledge of the world and to a civilization which is based upon the use of steam and electricity. This is a high and worthy ambition, for the work of a discoverer may appear higher than that of an administrator.

Dartmouth was founded for red men; Fisk University for black men and women. Dartmouth has been satisfied with the name of college, while the institution at Nashville, Tennessee, took, fifty years ago, the ambitious designation of university. Its founders looked far ahead, while its pupils had hardly reached the grammar grade. They were, however, quite as advanced as the Indian boys under President Wheelock when his school was moved from Lebanon, Connecticut, to Hanover. After half a century Fisk University gives fair hopes of becoming a real University, while we observe that during the year several other negro institutions founded about the same time and with a similar ambitious name, such as Straight and Tougaloo, have been content to become colleges. There are two negro colleges in the South which claim precedence in rank over the others. Howard University, if the District of Columbia belongs to the South, and Fisk University. Howard has large support from Congress and Fisk's future is assured by a considerable endowment and a body of about a thousand students, but that cannot yet be called a true university which includes preparatory and normal departments and which awaits the development of more than one post graduate school. Named after General Clinton B. Fisk, the university had for its first president Dr. Cravath, whose son, a prominent New York lawyer, is now president of its board of trustees and has been active in the large increase of its endowment. It was a great occasion for Fisk University, when, recently, Fayette A. McKenzie was inaugurated as president in the presence of presidents and other representatives of the principal universities of the country. Nashville is the chief educational center of the South, with its Vanderbilt University and its Peabody Normal College for white teachers, and now Fisk University gives promise that the highest education shall be supplied for negro youths. This is not yet supplied. We suppose that the training given at Fisk or Howard ranks hardly higher than two years at Harvard or Yale, but it should be the aim to be satisfied with nothing less than the very best which Vanderbilt or Tulane can offer to white youth, whether in the languages or the sciences. Why should not Fisk University at some future time challenge any college in Tennessee or the neighboring states to an extemporaneous debate in the Latin language, just as it sends out challenges for football?

Tuskegee Institute does not claim to be a university or even a college, but in usefulness and quality it stands higher than many that take these names. It is the monument of one man who has just past away whose name it ought to bear. One of these days it will be a college or a university, but never, we trust, will it cease to teach the common arts of life. Dr. Washington never called himself president, only principal, and now a new principal has to be selected. He will be a colored man, and a worthy successor will be found. There are others beside Booker T. Washington, great as he was. The race has not failed in the breed of noble men. It is famous for more than one man. It is a splendid augury for the future that a negro has by his genius been able to found this largest of all schools for the colored people of the South, and that it has secured so many influential supporters, both North and South. Hampton Institute did not cease to grow when General Armstrong died and Tuskegee, child of Hampton, will find leaders and friends worthy of those who have gone before.

THE PHONOGRAPH IN CHURCH

THE old question of how far it is advisable to use instrumental music in church services has entered upon a new phase. We no longer use the harp and psaltery, altho we say we do almost every Sunday. The organ, which was from the start an ecclesiastical instrument, is still ruled out by some of our stricter sects. The old Scotch Presbyterians, who objected to the introduction of a "kist of whustles' into the sacred edifice because they feared it would ultimately oust congregational singing, would find their fears confirmed if they returned to life and attended one of our fashionable churches.

Now the issue turns upon the propriety of the newer forms of musical machinery. A perplexed priest who has no choir in his mission churches writes to the *Ecclesiastical Review* to know if he may employ a Victrola to sing High Mass. The answer is no, and we quote the question as it was put to the Sacred Congregation of Rites in the original for the benefit of our Latinist readers:

> An, in Missa Solemni et aliis functionibus, in ecclesiis quibus est carentia magistri organi vel cantorum, etiam laicorum, liceat uti machina vulgo dicta *Grammofono*, pro cantu stricte liturgico gregoriano, partium variabilium aut invariabilium Missae Solemnis, hymnorum et aliorum canticorum?

Roma locuta est; causa finita est. This disposes of the phonograph so far as the Catholic Church is concerned, but there are enough more delicate questions involved in the new instrumentation to keep the Congregation of Rites busy or to give grounds for a schism in some Protestant sects. What, for instance, is the essential difference between a phonograph and a hired choir of non-Christian singers? Is it allowable to play the organ by a paper roll instead of by the fingers? How about substituting the sermon record of the most eloquent preacher in the country for ministers of less oratorical ability? And if hymns may be sung by phonograph, why may not prayers be said and why not responses given by the same means? And if then we run these instruments by hydro-electric power, are we not back to the praying water-wheel of the Buddhists?

THE STORY OF THE WEEK

The Armenian Massacres

The photographs given here show how one small band of Armenians from the villages about Antioch escaped the destruction which has overwhelmed their race. It is indeed a miracle that with less than a thousand men and with not enough guns to go around and with little food and ammunition these Armenian families were able to hold the mountain on which they had taken refuge against an army of 7000 Turks under German officers. Their entire stock of arms consisted of 150 old French rifles, 500 shotguns, 50 revolvers and 200 daggers. The attacking Turks several times got within five yards of the trenches when they were driven back by the gun fire and the rocks rolled down upon them by the Armenian men and women.

The Turks have taken care to avoid injury to the American missionaries who have in many cases been able to save Armenian families from slaughter and the girls in the American schools from being carried off to the harems. But it is now reported that the Superintendent of the American mission at Urfa, the Rev. Francis Hayes Leslie, has been murdered by the Turks while trying to protect the Armenians under his care. Dr. Leslie is a graduate of Fargo College, North Dakota, and had been sent back to Urfa before the war together with Dr. Bridge, of Michigan.

The commission of which Viscount Bryce is the head reports that the extent of the massacre and the cruelties practised are greater than at first supposed. Since last May 500,000 Armenian men, women and children have been murdered, a crime unparalleled in history. The worst details of the atrocities as told by the refugees at Tiflis are too hideous to be printed in a magazine but we quote a few passages from the Bryce report:

At Mush early in July the authorities called on the Armenians to hand over their arms and a large ransom for the notables of the town and the leading men. The villagers were subjected to revolting tortures. Finger nails and toe nails were forcibly extracted, teeth were knocked out, noses whittled down and the victims done to death in lingering agony. The female relatives of the victims who came to their rescue were outraged before their eyes, and the shrieks of the mutilated men and the death cries of the victims filled the air.

The method employed in disposing of the women and children in the concentrated camps was by burning.

In the hill country of Sasun 1500 surviving warriors were surrounded by 30,000 Turks and Kurds. Then followed a desperate, heroic struggle for life. Men, women and children fought with knives, scythes, stones—anything they could get

THE GREAT WAR

November 29—Bulgars capture Prisrend. Kaiser visits Vienna.

November 30—Serbs leave Monastir. Three Austrian ministers resign.

December 1—Italy will not make separate peace. British retreat down Tigris from Bagdad.

December 2—Germany asked to recall Captains Boy-Ed and von Papen. Austrians invading Montenegro.

December 3—Allies ask freedom of action in Macedonia. Anglo-French campaign in Kamerun progresses.

December 4—Germans renew attacks on Dvinsk from western side. Italian attacks on Görz slacken.

December 5—Rumania commandeers foreign shipping in her ports. Chinese cruiser "Chao-ho" mutinies at Shanghai.

THE FLIGHT INTO EGYPT OF THE CHRISTIANS, FROM ANTIOCH

One of the most moving incidents of the Great War is the marvelous escape from massacre of a body of Armenians from six villages just west of Antioch. Notified that they were to be banished to the deserts of Mesopotamia within eight days and knowing that this would mean death for most of them, they fled to the hills overlooking the Gulf of Alexandretta. Here they defended themselves for fifty-three days against an overwhelming force of Turks until finally their Red Cross flag caught the attention of a passing French cruiser which carried them to Port Said and safety. Those rescued included a thousand men, fourteen hundred women and eleven hundred children and four hundred babies

"OUT OF THE TRENCHES BY CHRISTMAS"

The Oscar II, chartered by Mr. Henry Ford, sailed from New York on December 4 with about 150 pacifists aboard. Mr. Ford hopes to bring about peace by Christmas, tho he is as yet uncertain of the means he will use. Holland promises to prevent his plan to establish an anti-militarist center there. Mr. Bryan hopes to join the party later

some ten miles of railroad as it runs thru the canyons of the Vardar River into Greece yet remain to be taken, but the French are said to be withdrawing from this position. By their victory on the historic plain of Kossovo and the capture of Prisrend following the Bulgars claim to have taken 16,000 Serbian prisoners besides obtaining a large amount of war material, including fifty field guns, 20,000 rifles and 148 automobiles. Prisrend stands close to the western frontier of Serbia near where the boundaries of Montenegro and Serbia join, boundaries which were drawn with such care and anxiety by the international commission two years ago, but doubtless soon to be obliterated. Fifty miles west of Prisrend is the city of Scutari on the lake of the same name, and here what is left of the Serbian government has made its headquarters.

The Serbian troops and refugees who have fled into the Albanian mountains will suffer from the inclemency of both man and nature. The weather is below the freezing point and snow covers the ground. Albania is the only part of Europe which remains in its primitive state, no railroads, no great cities, no manufactures or commerce, no national unity or established order. The Albanians in general hate the Serbs and with good reason. Only three years ago the Serbs overran the country with fire and sword and their atrocities, as revealed in the report of the Carnegie investigating commission, shocked the civilized world. The Albanians have not forgiven the Serbs for annexing Albanian territory and they are taking advantage of this opportunity to avenge themselves. It is reported that some of the Albanian tribes are actively assisting the Austrians against the Serbs and Montenegrins.

The invasion of Montenegro by the Austrians will do more to provoke the wrath of the Italians than anything else, for Queen Helena of Italy is a daughter of King Nicholas of Montenegro. It is not yet known what form the aid which the Italian Foreign Minister has promised to Serbia will take. Possibly the Italian troops will be sent across the Adriatic to Avlona on the Albanian coast which is already held by the Italians. But such action will tend further to alienate Greece from the Allies, for Greece claims Avlona and the southern part of Albania.

Monastir on the Greek Serbian frontier was taken by the Bulgars, but the Austrian flag was the only one hoisted, doubtless to avoid offending Greece. Serbia in annexing Monastir as part of her share of the spoils of the Balkan war could not claim any ethnic justification for her claim since the inhabitants were mostly Bulgars and the minority largely Greeks and Jews. The Serbs, who had been defending the approaches to Monastir, retreated in part into Greece, where it appears they were well treated and have not been disarmed and interned as was feared. The Allies, however, have not yet obtained satisfactory assurances from Greece that they will have the necessary freedom of operation in Macedonia and Salonica for their campaign against Bulgaria and they have threatened Greece with another blockade unless she yields to them.

The attitude of Rumania is causing anxiety to both sides. Russian forces are being massed on the frontier and the Austro-German troops are now being withdrawn from Serbia to be used in meeting the attack from this new quarter.

British Defeat in Mesopotamia

In our issue of November 19 we told of the advance of the British expedition up the Euphrates and Tigris rivers until they had arrived within eighteen miles of their goal, the city of Bagdad. Here, however, they met with what is certainly a check and may be a serious reverse. According to the British version the forces under General Townshend gained a victory over the Turks at the ancient city of Ctesiphon, practically wiping out one of the four divisions opposed to them and taking a large number of prisoners. But later, on account of the lack of water and the arrival of Turkish reinforcements, the British withdrew downstream, taking their wounded and captives with them.

On the other hand, the report which comes to us from Turkish and German sources says that the British lost more than five thousand and abandoned an immense amount of war material in their flight. Three aeroplanes out of the four which the British possest are in the hands of the Turks, as well as three machine guns, a hundred camels, three vessels and a flag. The British tried to make a stand at the fortified town of Azizi, but a night attack by the Turks drove them on down the Tigris to Kut el-Amara, a hundred miles below Bagdad.

If the British defeat is as decided as the Turkish report indicates, the British expectations of soon taking Bagdad and so securing control of the Mesopotamian valley, will be disappointed. The strength of the expeditionary force is not known to the public, but it certainly does not number many thousand, and the task of conveying supplies up the rivers and thru deserts beset with hostile tribesmen is very difficult. The work on the German railroad from the Bosporus to Bagdad has been rapidly pushed during the war and may have made more progress

WAR IS ——

GOING, GOING, GONE THE FORD PEACE EXPEDITION

than is suspected. To last accounts it had been completed to a point 150 miles east of Aleppo, and so only about 400 miles west of Bagdad. The opening of a thorofare thru the Balkans to Constantinople will enable the Germans to send munitions and officers or even troops directly into Mesopotamia to meet the Russian attack from the north and the British from the south.

The Management of the War

It has been the boast of Berlin that the governments of the Central Powers had remained unshaken while all the Allies had suffered from cabinet crises during the war. This, it seems, can no longer be claimed, for three of the Austrian cabinet have resigned, the ministers of Commerce, Finance and the Interior. The political significance of this can only be surmised. These cabinet changes followed upon a flying visit of the Kaiser to Vienna, where he was in consultation with the Emperor of Austria and his advisers.

The delay and ineffectiveness of the Allies in the Balkan crisis which proved fatal to Serbia showed the necessity of a closer coöperation between the commands. Hereafter all campaigns will be conducted in concert, according to plans worked out by joint general staff of military and naval experts and approved by the responsible ministers of the several governments in conference. Two such war councils have been held, one at Paris and the other at Calais, between the French and English premiers and their chief advisers.

General Joffre has been placed in command of all of the French armies except those in Africa. Hitherto, tho ranked as Generalissimo, campaigns in Gallipoli and Macedonia have not been under his control.

At the opening of the Reichstag on November 30 it became evident that it would not be possible to prevent some discussion of the two important questions which have been kept out of the previous sessions, namely, the food supply and the terms of peace. The President of the Reichstag in his opening speech summed up the situation in the following language:

> Proud England is troubled about the key to her supremacy. All our enemies have recognized that we are invincible on the battlefield; so, the more eagerly do they cling to their hope to destroy us economically, to conquer us by hunger. . . .
>
> We have grain for bread; potatoes, the most important food of the people, are abundant. If in other things there may be a scarcity, as cannot be disputed, yet the hardships thus caused to a majority of the poorer population will be surmounted by the organization of the provision market.

Italy's Part in the War

The Austrian city of Görz, ten miles east of the Italian frontier, still holds out against persistent attacks of the Italian troops. For nine days and nights the fighting for the possession of the bridgehead on the Isonzo River at

AN OVERFLOW MEETING

In New York City freight congestion grows worse instead of better. The piers are overcrowded and even the nearby streets are filled

Görz continued without cessation. This is "the hell of battlefields" according to the Austrian commander, the Archduke Joseph Ferdinand, and it is claimed that nowhere else have so many fallen in so small a space.

It has been repeatedly rumored that Italy was likely to make a separate peace with Austria and withdraw from the war. The Austrian Government offered Italy last May more of the "unredeemed" territory for remaining out of the war than she has gained by her six months fighting and doubtless that offer, or a better one, is open. But now it appears that Italy has definitely decided to join with the Entente Allies for better or worse. The Pact of London by which on September 5, 1914, France, Russia and Great Britain agreed not to make peace separately, has now been signed by Italy, so the new Quintuple Alliance is accomplished, for Japan signed in October.

This action was announced by Foreign Minister Sonnino to the Italian Parliament on December 1. At the same time he took occasion to express the determination of Italy to take part in the Balkan campaign. He said:

> The existence of the political and economic independence of Serbia is a vital necessity for Italy's existence as a great power. In accord with our allies we consider the restoration of the heroic Serbian people in the fullness of its independence as an unavoidable condition to end this great war.

The statement of policy made by Baron Sonnino received the approval of all parties in the Chamber of Deputies.

Anarchy in Persia

The British expedition operating from the Persian Gulf is in double peril, for while it is forced to retire by the attack of the Turks in Mesopotamia it is threatened with a rising in the rear by the Persians. Little news is allowed to transpire from this part of the world and that little is not reliable, but it is evident that the people have become alarmed at the invasion of Persia from the north by the Russians, from the south by the British, and are taking up arms in defense of the independence of their country. The Shah was at first disposed to espouse the cause of these nationalists and was ready to take the field against the invaders. But the massing of a strong Russian force at Kazvin, only eighty-six miles northwest of Teheran, caused him to change his mind suddenly. He has consented to remain in Teheran and to allow the Russians to search in the capital for the depots of arms which had been hidden in preparation for a rising.

The Senate and the House

In preparation for the session of Congress several questions and appointments were considered last week by the managing committees of the majority, and in caucus, at Washington. Mr. Kern, of Indiana, was reëlected floor leader of the Senate. Concerning the election of a president pro tempore there was a sharp contest. Objection was made to the reëlection of Senator Clarke, of Arkansas, because at the recent session he led the seven Democratic bolters who turned against the Administration's Ship Purchase bill. In opposition to him twenty-three votes were pledged. After several caucus sessions, Mr. Clarke was reëlected by a vote of twenty-eight to twenty-three, his unsuccessful competitor being Mr. Pomerene, of Ohio, on whose motion the election was made unanimous. Mr. Lewis, of Illinois, was elected party whip.

Drastic propositions for cloture amendments to the rules for debate were made by Senator Owen and others. Attempts to limit debate in the Senate have heretofore been unsuccessful. Mr. Owen asked that debate should be closed within two days following a majority vote on the motion of a Senator asserting that there was undue delay. He was made chairman of a committee appointed to consider the question. This committee reported a rule providing that upon the assertion of a Senator that there was undue delay, a vote should be taken, and that if a majority should say that he was right the debate must close within two days. But the caucus at the end of the week practically abandoned the project after five hours debate, which showed that no form of cloture could command sufficient support. Mr. Owen and his committee were given leave to withdraw their recommendation. If it had been accepted, there would have been a long discussion on the rules at the opening of the session and reception of the President's message might have been delayed. Mr. Owen can introduce his rule in a resolution, and it will be referred to the Rules Committee. Probably debate upon the Administration's program will be without limit in the

Edwin Levick

STANDING ROOM ONLY

In the Erie Railroad such thousands of cars are now on the belt of railroading facilities

Senate. Some have said that without cloture the new Ship bill cannot be passed.

Mr. Kitchin, of North Carolina, who opposes the military and naval defence plans, is chairman of the House Committee on Ways and Means, and floor leader. This committee directs the formation of other committees. The old chairmen are retained. About two thirds of them are from the South. Because the number of Republican Representatives has been increased, each committee will have one more Republican at this session.

In the Field of Labor

In Chicago, 54 men, nearly all of them officers of labor unions in the building industry, have been indicted, each of them 46 times and on several thousand counts, for extortion, conspiracy and malicious mischief. It is charged that the accused men have collected more than $500,000 in blackmail from building contractors. Their method was to call a strike on some slight pretext, and then to accept for settlement a bribe, which commonly was $500, altho in some cases a much larger sum was demanded. The State's Attorney (who has recently received threats against his life) says that several of the blackmailers' victims were ruined by them. There was a blacklist for all who did not satisfy the demands. These men, he adds, were not really labor leaders or representatives of union labor, but were a disgrace to it and were working for themselves.

At the first hearing in court, twenty-five of the accused appeared. Several had left the city. Among the indicted are two saloon keepers and two bartenders. The judge decided that the bail must be $2,500 for each indictment, or $115,000 for each man. The total would exceed $6,000,000.

There has been much disorder at Wilkesbarre, Pennsylvania, in connection with the strike of street railway employees. Mobs wrecked cars last week and inflicted serious injuries upon strike-breakers, who are beginning to desert because the service is so perilous. The men have decided to accept State Senator Carlin as an umpire. The company refused to have any dealings with their leader. Peace has not been restored in all the war order factories. The 2400 workmen of a manufacturer of automobile bodies (on war contracts) at Cleveland, on strike for a month, have gone back, with a wage increase of twenty-five cents a day. But 900 men at the Winchester Arms works in New Haven are out for a day of eight hours, and the employees of the Remington company in Bridgeport are holding meetings for a strike, on account of discrimination against members of unions.

Elizabeth Gurley Flynn, a well known I. W. W. agitator, has been on trial in Paterson, New Jersey, for inciting strikers to violence in a public address there two years and a half ago. The jury found her not guilty. Two years ago the jury disagreed. The testimony of detectives and policemen as to the words she used was not credited. She was assisted by a notable defense committee of eighty-one persons, among whom were Mrs. O. H. P. Belmont, Mrs. Rose Pastor Stokes, Mrs. Inez Milholland Boissevain, Mrs. Frederick C. Howe, Miss Lillian Wald, Mrs. Robert Bruere, Mrs. J. Borden Harriman, Mrs. Willard Straight, William English Walling, Amos Pinchot, the Rev. Percy Stickney Grant, and four other clergymen. This committee employed counsel and paid the cost of the defense.

© *International Film Service*

FREE SPEECH ACQUITTED

Miss Elizabeth Gurley Flynn, the young I. W. W. leader, on trial for inciting a riot among the silk mill strikers in Paterson, N. J., was found "not guilty." "Freedom of speech has triumphed over 'loranorder'" was Miss Flynn's comment on the case

Buenz and the Attachés

At the close of the trial, in New York, of Dr. Karl Buenz, resident director of the Hamburg-American Steamship Company, and three of his subordinates, the accused were found guilty of defrauding the United States by means of false manifests, which misrepresented the nature of the cargoes, and the destination, of ships sent out from New York with coal and provisions for German warships at sea. Dr. Buenz, formerly German Minister to Mexico, and for years prominently connected with the German Foreign Office, was sentenced, with two of his associates, to be imprisoned for a year and a half in the Atlanta Penitentiary. The fourth man accused was sent to the same prison for one year. Violations of neutrality or international law were not involved directly in the verdict, but the offense was fraud, which tended to throw suspicion on all American manifests and clearance papers and to affect our commerce.

On the following day our Government requested the Government of Germany to recall immediately Captain Boy-Ed, naval attaché, and Captain von Papen, military attaché of the German Embassy, "on account of what this Government considers improper activities in military and naval matters."

It is said that this action had been intended for some time, and that delay was due to some hope that Germany would disavow responsibility for the work of the submarine that sank the "Lusitania." But there no longer seemed to be room for even hope as to that, and the request for recall was sent. It is reported that the Austrian Consul General, Alexander von Nuber, and several German or Austrian consuls will soon be the subjects of similar requests. Altho no official statement of the evidence against the two attachés has been made the list of their offenses is a long one. There is reason to believe that $27,000,000 of the German Gov-

ernment's money has been used here, mainly under their direction, in plots and the promotion of projects hostile to the Allies. Boy-Ed's connection with the case of Stegler, who was sent to prison for three years for using a false passport, was conclusively shown at the time of Stegler's arrest.

Mr. Ford's Peace Expedition

The ship "Oscar II," bearing Henry Ford and his party of peace advocates, sailed from New York on the afternoon of the 4th. There was a crowd of sympathizing persons and sightseers on the pier. Mr. Bryan was there, and Thomas A. Edison. Mr. Bryan had exprest to Mr. Ford his sympathy, but had also said that he felt that just now he could be of greater service in this country, opposing a large increase of army and navy expenditures. He hopes that he can join the Ford party at The Hague. Just before the ship sailed he was a witness at the marriage of Berton Braley, a writer, and Miss Marian Rubincam, of Philadelphia. Both of them are Mr. Ford's guests on the steamship. Mr. Ford was very confident that those who predicted failure for his project would be disappointed. After the ship had left her pier, a delayed guest, Urban J. Ledoux, of Biddeford, Maine, who said he had been invited, tried to swim out to her. A tugboat rescued him, and he was taken to a hospital.

The official list showed the names of 148 guests. But fifty-four of them are newspaper or magazine correspondents, three represent moving picture companies, and twenty are members of Mr. Ford's personal staff. Miss Jane Addams was taken ill, and therefore could not go. Among those who declined was Miss Margaret Wilson, the President's daughter. Ex-Congressman Bartholdt withdrew his acceptance. Some say he did this because of an interview in which Mr. Ford exprest a preference for Great Britain. John Wanamaker, who was invited, remarked that he had found that while Mr. Ford had a mission, a generous heart and a fat pocketbook, he had no plan. There must be a government behind a peace movement, if it is to accomplish anything. Secretary Lansing has informed several European nations that our Government is not connected with the Ford movement and assumes no responsibility for it. Holland said that any attempt to use that country as a base of operations for interference with the military situation would surely be prevented. Dispatches published abroad said that Mr. Ford intended to foment a strike, or mutiny, in the trenches. This he promptly denied in cablegrams. Mr. Roosevelt says that the movement will not be mischievous, only because it is so ridiculous. He adds that it is a most discreditable thing for this country.

It is the purpose of Mr. Ford and his associates to establish at The Hague a permanent unofficial court composed of four or five representatives of each neutral country, which shall sit continuously and discuss ways to promote or cause peace, hoping for success. But this court, it is said, will suggest no plans to the belligerents.

Cesare in New York Sun

VERY CLEVER, BUT HOW LONG CAN HE KEEP IT UP?

Marcus in New York World

THE RANGE

GREECE IS STILL ON THE FENCE

FROM STATE TO STATE

DELAWARE: Some months ago the Wilmington Board of Health notified the Board of Education that twenty public school buildings were in an unsanitary condition. The Board of Education answered that the City Council had not provided funds for altering the plumbing, the Council having declared the alterations unnecessary. Then the Board of Health ordered fourteen of the schools closed, whereupon the City Solicitor exprest the opinion that the Board of Health had exceeded its authority. Unless the order is withdrawn approximately 5000 pupils, including those of the night schools, will be shut out practically all winter, since, even if funds were now available, it would take several months to make the alterations.

FLORIDA: The Florida Marketing and Distributing Bureau, a coöperative organization of vegetable producers which made an experimental start last season with only a few members, has been so successful in opening up markets outside the state that its membership has multiplied several times, yet it is impossible to fill orders as fast as they come in. Excessive rains in some parts of the state and want of rain in other parts have made short crops, but price standards have been so well maintained by the bureau that in the aggregate producers have received more money than in other years. It is now proposed that the organization handle fruits in addition to vegetables.

GEORGIA: The law to prohibit the manufacture or sale of liquor in Georgia enacted at the special November session of the Legislature, is one of the strictest in the United States. It defines "liquor" as any drink containing more than one-half of one per cent of alcohol. The new act is intended to eliminate all breweries, "near-beer" saloons and locker clubs now operating under the present law, which allows the manufacture and sale of drinks containing not more than four per cent of alcohol. The new law goes into effect the first of next May.

IDAHO: Sugar beets, which constituted one of the most profitable crops of Idaho this year, promise to be still more profitable next year. The Utah-Idaho Sugar Company, with large factories at Blackfoot, Idaho Falls and Sugar City, has already announced that next season it will pay not only the flat rate of $5 a ton, but will add ten cents for each half unit of sugar content over fifteen per cent. This is expected to increase not only the acreage, but the quality as well. It is estimated that the average price will be about $5.30.

ILLINOIS: Fourteen leading newspapers in as many rural counties in central Illinois have arranged each to devote a page a week to subjects calculated to arouse their respective groups of readers to "a general sense of their relationship to each other," the purpose being to "help readers to help themselves by a clearing house of ideas gathered from the world of coöperative effort affecting every phase of rural improvement." A special feature of the plan is to organize in each county a coöperative body of 100 citizens, prorated according to population, so that each township will have at least one member, this body to hold regular experience meetings which the newspapers will report for the benefit of kindred bodies in other counties and readers in general.

INDIANA: The second monthly report of the State Industrial Board under the new compensation act—a much more complete report than the first one was—shows twenty-one persons killed and 2762 injured in the various employments. There were 132 different causes of injury, many of which, the board says, will be removed by its campaign for the installation of safety appliances. The report shows the building trades to be the most hazardous, while machine shops and railroads come close behind. The average weekly wage of injured men was $13.17 and of injured women $3.60.

KENTUCKY: The Mountain Highway thru eastern Kentucky seems now to be assured. The five counties thru which it is to run have agreed each to build its part of it. This will be one of the most picturesque highways in the country. It will run from a point near Pound Gap on the Kentucky-Virginia border thru Whitesburg and down the north fork of the Kentucky River via Hazard, Jackson, Beattyville and Irvine, to a point near Richmond, Madison County, where it will join the Dixie Highway.

MISSISSIPPI: The State Board of Health recently issued a statement, saying: "Typhoid fever is an ever present disease in the State of Mississippi." In the last year cases were reported from every county in the state and deaths resulted from it in every county excepting George and Jefferson. "When we stop to consider the means by which this disease is contracted," says the board, "it is a disgrace to the people of the state."

NEW HAMPSHIRE: An earnest effort is being made to revive the sheep industry of this state. The New Hampshire Sheep Breeders' Association has made provision for a series of educational meetings with farmers in every county this winter. In this the state authorities will coöperate, an appropriation for the purpose having been made by the last Legislature. The association also voted to take vigorous steps for the enforcement of the laws against sheep-killing dogs. Only 12,000 sheep are taxed in the state, while licensed dogs number 9780. In 1860 there were 310,000 sheep in the state, valued at about $850,000.

NEW MEXICO: The recent convention of the New Mexico Educational Association at Albuquerque was the most spirited ever held by this organization. Alvin H. White, superintendent of public instruction, denounced the new constitution as the poorest possible from the educational standpoint. His principal objections were that it throws the county school superintendent into politics, makes the superintendent of public instruction elective, makes the bulk of the state school revenues depend on the commissioner of public lands and provides statewide uniformity of text books, but fails to make them free. The association's legislative program includes the elimination of third grade teachers and the amendment of the county unit law so that county superintendents will be vested with the right to incur expenditures as well as to approve accounts and draw warrants.

NORTH DAKOTA: Never before in the history of this state have so many of its people worked in unison for a given purpose as in the recent "Appreciation Week," devoted to sounding the praises of North Dakota. At the request of the state press association Governor Hanna and the mayors of practically all the cities issued proclamations setting the week apart for this purpose. Schools, churches and all sorts of associations held special exercizes for the dissemination of knowledge concerning the state's achievements and resources. Nearly every newspaper issued a "booster" edition, containing letters written by farmers in contest for prizes offered by the railroads, and merchants in their advertising and displays made a specialty of state products.

OHIO: With the impressive ceremony of the masonic ritual and in the presence of social, civic and patriotic organizations from several states and prominent men and women from all parts of the country, officers of the grand lodge of Ohio laid the cornerstone of the McKinley Birthplace Memorial at Niles. The building, funds for which have been contributed by people of every state in the Union, will stand almost on the site of the little weather-beaten frame house that was the McKinley home. The house has been moved away, but it is said it will probably be brought back and placed near the memorial building.

PENNSYLVANIA: According to statistics just issued by the Commissioner of Labor and Industry the market value of the products of 20,571 industrial plants in this state in the last year was $3,245,835,800, or nearly a billion dollars more than the capital invested in the plants. Total wages and salaries paid to 1,066,486 persons were $685,422,700. Of those employed in these industries 74.1 per cent were Americans. The showing for this year will be much greater. Never before [illegible] so many plants been in operation as now, and never [illegible] the output been so great or the wages offered so high.

TEXAS: The sixteenth annual [illegible] Carnival at Houston this year was made unusually interesting to the people of the entire state by meeting of various organizations [illegible] state as well as local improvements. Daily discussions of general subjects such as the cutting of cotton, the warehouse marketing law, good roads and other topics for presentation to the Legislature were added to the pageantry and many forms of entertainment, giving the occasion a quality of serious purpose as well as carnival amusement.

UTAH: State Fish and Game Commissioner Chambers, having succeeded in establishing two large sanctuaries for wild birds and beasts in Utah, is now planning to have one or two smaller retreats for them in each county of the state. Two years ago he induced the Legislature to prohibit the killing of any wild bird or animal, excepting those of a predatory nature, on 22,000 acres in Sevier County and 15,000 acres in Utah County. Now the greatly increased numbers of wild things in these sanctuaries have become objects of pride to the state, and the people want more such safety spots.

VIRGINIA: Mr. F. William Sievers has completed the equestrian statue of General Robert E. Lee which is soon to be erected by the State of Virginia near the spot from which the Southern leader watched Pickett's charge at Gettysburg. The statue is one and three-quarters life size, and is said by those who knew General Lee to be a perfect likeness. In front of the base is a battle detail full of action. Five men, representing infantry, cavalry and artillery, are making a desperate stand over a shattered cannon, while a boy bugler is encouraging them and a mounted color bearer is dashing forward carrying the Virginia state flag.

WASHINGTON: If present indications point truly this state is soon to become one vast rabbit farm. At a recent meeting of the Tacoma Pet Stock Association figures were given to show that the rabbit industry may be made one of the most profitable in this country. Sixty-two per cent of the felt used by hat manufacturers in the United States is made from rabbit skins; the fur of the rabbit is extensively used in this country for imitating more valuable furs; the meat of the rabbit contains 82 per cent of nourishment, and finally the rabbit is one of the most prolific and most cheaply grown animals of use to mankind. Most of the rabbit skins used in America have heretofore come from Germany, but the prospect is that Washington will soon be furnishing a large part of them.

THE FOOD OF WAR

BY JANE ADDAMS

Only serious illness prevented Miss Jane Addams from joining the group of peace advocates who are sailing with Mr. Henry Ford on his idealistic mission. She has already made one peace pilgrimage to Europe during the past year and in the following article she presents some significant observations made on that trip. Miss Addams is National Chairman of the Woman's Peace Party, which recently directed the sending of thousands of telegrams requesting President Wilson to take some action to bring about peace.—THE EDITOR.

AT the close of the International Congress of Women held at The Hague last April two delegations were commissioned to carry the resolutions of the congress to the various governments. One committee visited the Scandinavian countries and Russia, and another, of which I was chairman, began with the warring nations. We were received in London, in Berlin, in Vienna, in Rome, in Berne, in Paris, in Havre, where the Belgian Government is now established, and at The Hague, and we were also granted an audience with the Pope. Both delegations in every case were accorded an interview by the Minister of Foreign Affairs and in almost every case by the Chancellor or Prime Minister, and in all the countries we saw members of Parliament and other men who are responsible for governmental policies. Traveling rapidly as we did from one country to another, perhaps nothing was more striking than the diametrically opposing opinions found on each side concerning the identical occurrences or events.

We arrived in London two days after the sinking of the "Lusitania" and read in many columns of the press the indignation against this "crowning outrage of German piracy upon helpless women and children." So profound and national was this indignation that during the next few days, when we were still in London, the English Parliament, following the outrages upon the German bakeshops and other places of business, decided to interne the German subjects.

Ten days later, when we reached Berlin, the papers were still rejoicing over the victory which had been achieved by a tiny submarine over "a great auxiliary cruiser of the British navy." We were often reminded of the old phrases in our school books about the "Monitor" and the "Merrimac." Certain data were given over and over again; the "complete destruction of the 'Lusitania' was due to the explosion of her own cargo, she was an armed cruiser, and American passengers had been repeatedly warned."

Inevitably the inferences from these widely divergent facts were irreconcilable. Even reasonable and justice-loving people in both countries who wished to be sure of their data before passing judgment would be quite unable to deal impartially with the situation. As to the large number of people found on both sides who grasp eagerly at any atrocity which may justify or increase the bitter animosity against the enemy, we were unable to determine whether the hate produced the atrocities or the atrocities the hate.

Almost every tale we heard in London of outrages on the part of German soldiers against the helpless Belgians was repeated in Vienna of the brutal behavior of the Cossack soldiers in East Prussia. Our delegation reached Italy ten days after she had declared war against Austria. A Socialist member of Parliament, proud of the fact that his party had stoutly voted against the war appropriation, told us unequivocally that "This was a newspaper-made war," that a campaign conducted thruout the winter had culminated in a sensational three days when the people reached the highest degree of excitement. One is of course reminded of the old nursery riddle, which is first, the egg or the hen? Does public opinion control the press, or the reverse? It was perhaps inevitable for our Socialist friend to believe that the great Italian banks with their interests in Dalmatia were the power behind the press. Certain cities were placarded with statements and photographs of atrocities and they had not been lacking in D'Annunzio's fiery speeches.

The journals everywhere we went tended to make an entire nation responsible for the crimes of individuals, a tendency which is certainly fraught with awful consequences even altho the crimes for which the nation is held responsible may have originated in the gross exaggeration of some trivial incident. The very size and extent of the contention acts like a madness.

This perhaps accounts for the impressions left upon our minds that in the various countries the enthusiasm for continuing the war is fed largely on a fund of animosity growing out of the conduct of the war. Germany is indignant because England's blockade was an attempt to starve her women and children, England is on fire over the German atrocities in Belgium.

A young man in France said, "We hope to be able very soon to squirt petroleum into the German trenches so that everything will easily catch fire." I replied, "That seems very terrible." "Yes," he said, "but think of the poisonous gas and the horrible death of our men who were asphyxiated." Constantly one hears that Germany has done this; the Allies have done that; somebody tried to do this and we foiled them by doing that. But after all, great nations, however legitimate the first cause of war may have been, cannot conduct their operations from the standpoint of reprisals, which is not even a permissible method among small groups. Occasionally we met a man who said, "Of course in the end the war must be adjudicated with the original causes as a factor, but we are getting further away from the original causes every day, and more and more the conduct of the war is modifying its aim."

The leading English papers have long since ceased to write about "a war to end war," and thru a series of gradations some of them have even reached "the crushing of Germany" as a worthy aim. In each country we were told of hideous occurrences of warfare which demonstrated that the continued existence of the enemy was a menace to civilization. Is it because this war has been carried to the very doorsteps of those people in Europe who have reached the stage of sensibility toward human suffering and an understanding of the differing individual which has never been obtained before in human history, that the gathering horror of that knowledge drives them on? A Hungarian owning a large estate near the Carpathian Mountains told me in Budapest that he was sheltering thirteen hundred men whose feet or hands had been frozen during the winter campaign and he bitterly resented the cruelty to which so many of his countrymen had been subjected, and of course held "the enemy" responsible.

It is as if the mind of Europe were submerged under a great emotionalism, as if the love of country had inhibited all normal family affection and daily interests so that thousands of people joyfully surrendered their children and all their possessions. A Frenchman, looking around his library, said to us, "I used to think

there was something valuable in these books, but I would throw them at once into the trenches, if their burning would so heat the hands of a soldier that he might shoot to kill one man of that nation which is destroying the liberties of Europe." Nevertheless the fanatical patriotism which has risen so high in these countries, and which is essentially so fine and imposing, cannot last. The waves will come down, the crest cannot be held indefinitely. Then men must see the horrible things which are taking place not as causes for continuing the war, but as that which must never be allowed to occur again. At last they must soberly count up the loss of life and the debts they have assumed for the generations to come. An old man said to me, "Some day the people will cease to think of the nation and will think of their children and grandchildren."

Curiously, however, at the present moment such an accounting seems only to increase the demands. Many Germans who originally justified the war on the ground of self defense and the mobilization of Russia, have come to feel that Belgium or other territory must be retained as a justification for the expenditure of life and treasure; so in France, which was originally fighting to clear her invaded territory, there is talk not only of recovering the lost provinces, but of pushing the boundary to the river Rhine, that the flower of France may not have died in vain.

Such plans readily find expression in the press, but the man whose burning heart can find no slightest justification for the loss of the finest youth of Europe unless it results in the establishment of such international courts as will make war forever impossible, finds it difficult to discover a vehicle thru which he may express this view. International ideals for the moment are treated not only with derision and contempt, but as dangerous to patriotism.

Perhaps I may be permitted to close this article with a recent personal experience.

In an address in New York City given the week of my return from Europe I was presenting data which to my mind indicated a revolt against war, taking place in the midst of the war itself. I cited the loathing against the use of the bayonet felt by a certain type of young man, to overcome which "We were told in several countries" that stimulants were administered before a bayonet charge was ordered!

It never occurred to us who heard this statement nor to those who made it, that this was done because the men lacked courage. It was taken for granted that the stimulants inhibited the sensibilities of a certain type of modern man to whom primitive warfare was especially abhorrent, altho he was a brave soldier and serving his country with all his heart. The giving of stimulants was a quicker process than that incitement to reprisals and revenge which in actual warfare often serves as an immediate incentive. We were in fact told of this substitution, once by a Frenchman who said, "That since the use of poisonous gases by the Germans, no further stimulants could possibly be needed for a thoroly indignant and aroused soldiery," and again by an Englishman who spoke of the difficulties in the early months of the war in overcoming the camaraderie unhappily evinced by certain British troops for the Saxons long established in an opposite trench and the relief when the Bavarians, against whom no incitement to hostility was needed, took their places.

I used no illustration for the statement in my New York address, and speaking broadly and without notes I unfortunately gave a mistaken impression as to the extent to which I myself believed stimulants had been used in connection with bayonet charges. The statement, much exaggerated in the reporting and without any qualifying clauses, was made the subject of much unfriendly comment, especially in those journals which had been unalterably opposed to the woman's meeting at The Hague from its inception.

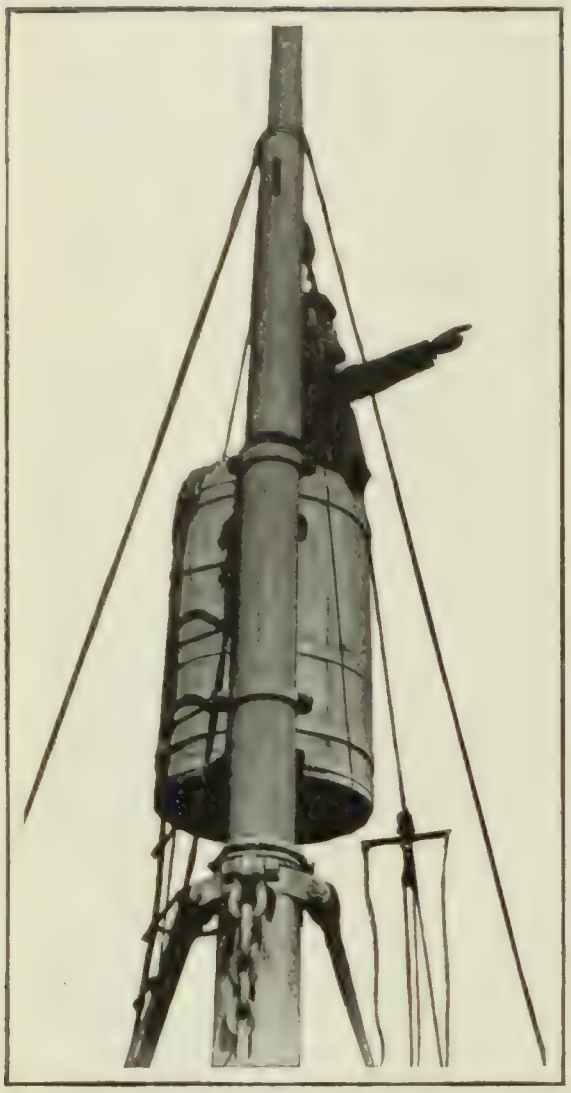
Several weeks ago, therefore, I took advantage of an interview on the subject with an Associated Press man to make clear two points: first the authority for my statement that "we have been told in several countries." I instanced three occasions upon which my friend Dr. Alice Hamilton and myself heard the statement when we were together, so that we have since been able to confirm each other's impressions. We distinctly recall a French governmental official, an English professor and a convalescing German soldier. The latter, who was on sick leave in Switzerland after three months in the trenches, was an exceptionally intelligent young man. He said to us, "A bayonet charge does not show courage, but madness. Men must be brought to the point by stimulants, and once the charge is begun they are like insane men. I have been in it, and after it was over I was utterly dazed. I did not know what had happened to me any more than if I had been picked up from the water after an explosion on shipboard." He said that the stimulant given to the German soldiers contained sulphuric ether.

I remember at the time Dr. Hamilton remarked to me that she knew from the medical journals that it had been found necessary in both the German and the English armies to abandon the idea of total abstinence and serve rations of alcohol to the soldiers.

I should also like to quote from the journal *Stampa* the impressions of a French soldier, who writes:

> You act and fight as in a dream; you have lost the sense of time and place and feel yourself to be merely a part of a monstrous whole that twists itself convulsively. It is as if the life of sensation had been cut off. And later on, when you are yourself again, you think you have been shut up in a cage, out of which you have been desperately trying to escape, but in vain. It is not true that you never are afraid, but proximity robs death of its terrors. Many soldiers experience an irresistible loathing of the use of their bayonets, of rushing on a living human being with such a weapon. They simply cannot do it.

The second point I made in my interview with the Associated Press man was that the soldier for whom stimulants might be necessary represented a type of sensitive man doubtless found in each army. Such assertions as I made in regard to the use of stimulants were confined to this type of man, and it never occurred to me to make any generalizations in regard to the "average" soldier, as I was reported to have done. One of the hideous results of war is the inveterate tendency of the "average" man to fall into the spirit of *hot retaliation.* We were told in two countries that the soldiers were being supplied as fast as possible with short knives because they could not advantageously use their bayonets in the occasional hand to hand encounters within the trenches themselves, and we of course know of the men who said of the bayonet charge, "Ah, that is fighting—when the primitive man lets himself go and does the sort of fighting which is obvious and definite."



It is furthest from my wish and intention to add one word to the campaign of calumny, to disparage either the motives or the courage of the long line of fighting men, to repeat one tale of horror which might increase that poverty of heart induced by hatred. One returns from Europe this year in a much too serious frame of mind to wish to utter one word which might increase the confusion and misunderstanding or undermine the respect for our common human nature in these trying times.

THE SHORE WHALERS

BY ROY CHAPMAN ANDREWS

ASSISTANT CURATOR OF MAMMALS, AMERICAN MUSEUM OF NATURAL HISTORY

"THERE SHE BLOWS!"

IN the good old days of deep-sea whaling, when vessels put out to sea for cruises of three or four years and the whales were killed from a small boat with a hand harpoon and lance, only three species, the sperm, bowhead and right whales, were hunted. Until Svend Foyn, a Norwegian, invented the harpoon gun in 1864, and laid the foundation of modern whaling, the fin whales, of less commercial value, were seldom captured.

With the development of steam-whalers the situation was changed. The new boats made possible the capture of "finners" in sufficient numbers to warrant the erection of stations at certain points on the shore near the feeding grounds of the animals, where the huge carcasses could be brought in and converted into commercial products. Thus has grown up a new industry, shore whaling, which is now carried on in coastal waters all over the world.

The modern shore station is usually situated in a bay or cove not far from the open sea. The flensing slip and carcass platforms are the most striking portions of the establishment, and these are surrounded by boiling vats, machine for drying the flesh, engine house, wharf, bunk houses and offices.

The whaling ships are trim, high-bowed vessels of about 100 tons burden, round-bottomed to facilitate speedy manipulation.

Most striking of all the upper works is the harpoon gun, mounted on a heavy iron support at the bow.

The harpoon is seventy-six inches in length and has a double shaft, at the end of which are four twelve-inch flukes or barbs; these are tied to the shaft, but spread widely upon entering the whale's body and prevent the iron from drawing out. The harpoon is tipped with a hollow point called the "bomb," which is filled with powder and ignited by a time fuse set for the desired interval. Three or four seconds after the gun is fired the bomb bursts, frequently killing the whale almost instantly.

A large ring slides easily along the double shaft of the harpoon, and to this one end of a five-inch rope of tested Sicilian hemp is fastened.

The rope passes backward over a roller in the bow of the ship, to a double winch just in front of the bridge and down into the hold, where a thousand fathoms (6000 feet) or more are carried. By means of the winch the whale is "played" as one would use a reel on a fishing rod; after the animal has been killed it is hauled to the surface by means of the winch and fastened to the side of the ship.

In America, and at stations in nearly all other parts of the world, whales are "cut in" by the Norwegian methods and are drawn entirely out of the water upon a long inclined platform called the "slip," where the flesh and blubber are stripped off with the help of a steam winch.

THE HARPOON AND THE HARPOONER

In Japan, however, quite a different method is used, which, although very rapid and picturesque, is also exceedingly dangerous. It is a modification of that used by the deep sea whalers, and the animals are cut in while lying in the water.

A FIN BACK

Late in the morning on the day after I arrived at Oshima, Japan, the long-drawn wail of a siren whistle sounded far down the bay, and in a few moments a little whaling vessel swept proudly around a picturesque rocky headland and steamed swiftly toward the station. She was listing far to starboard and we could see the huge flukes of the blue whale, the *Shiro-Nagasu Kujira* of the Japanese, waving at her bow.

She slipt quietly up to

the end of the wharf and two cutters sculled a "sampan" out to meet her.

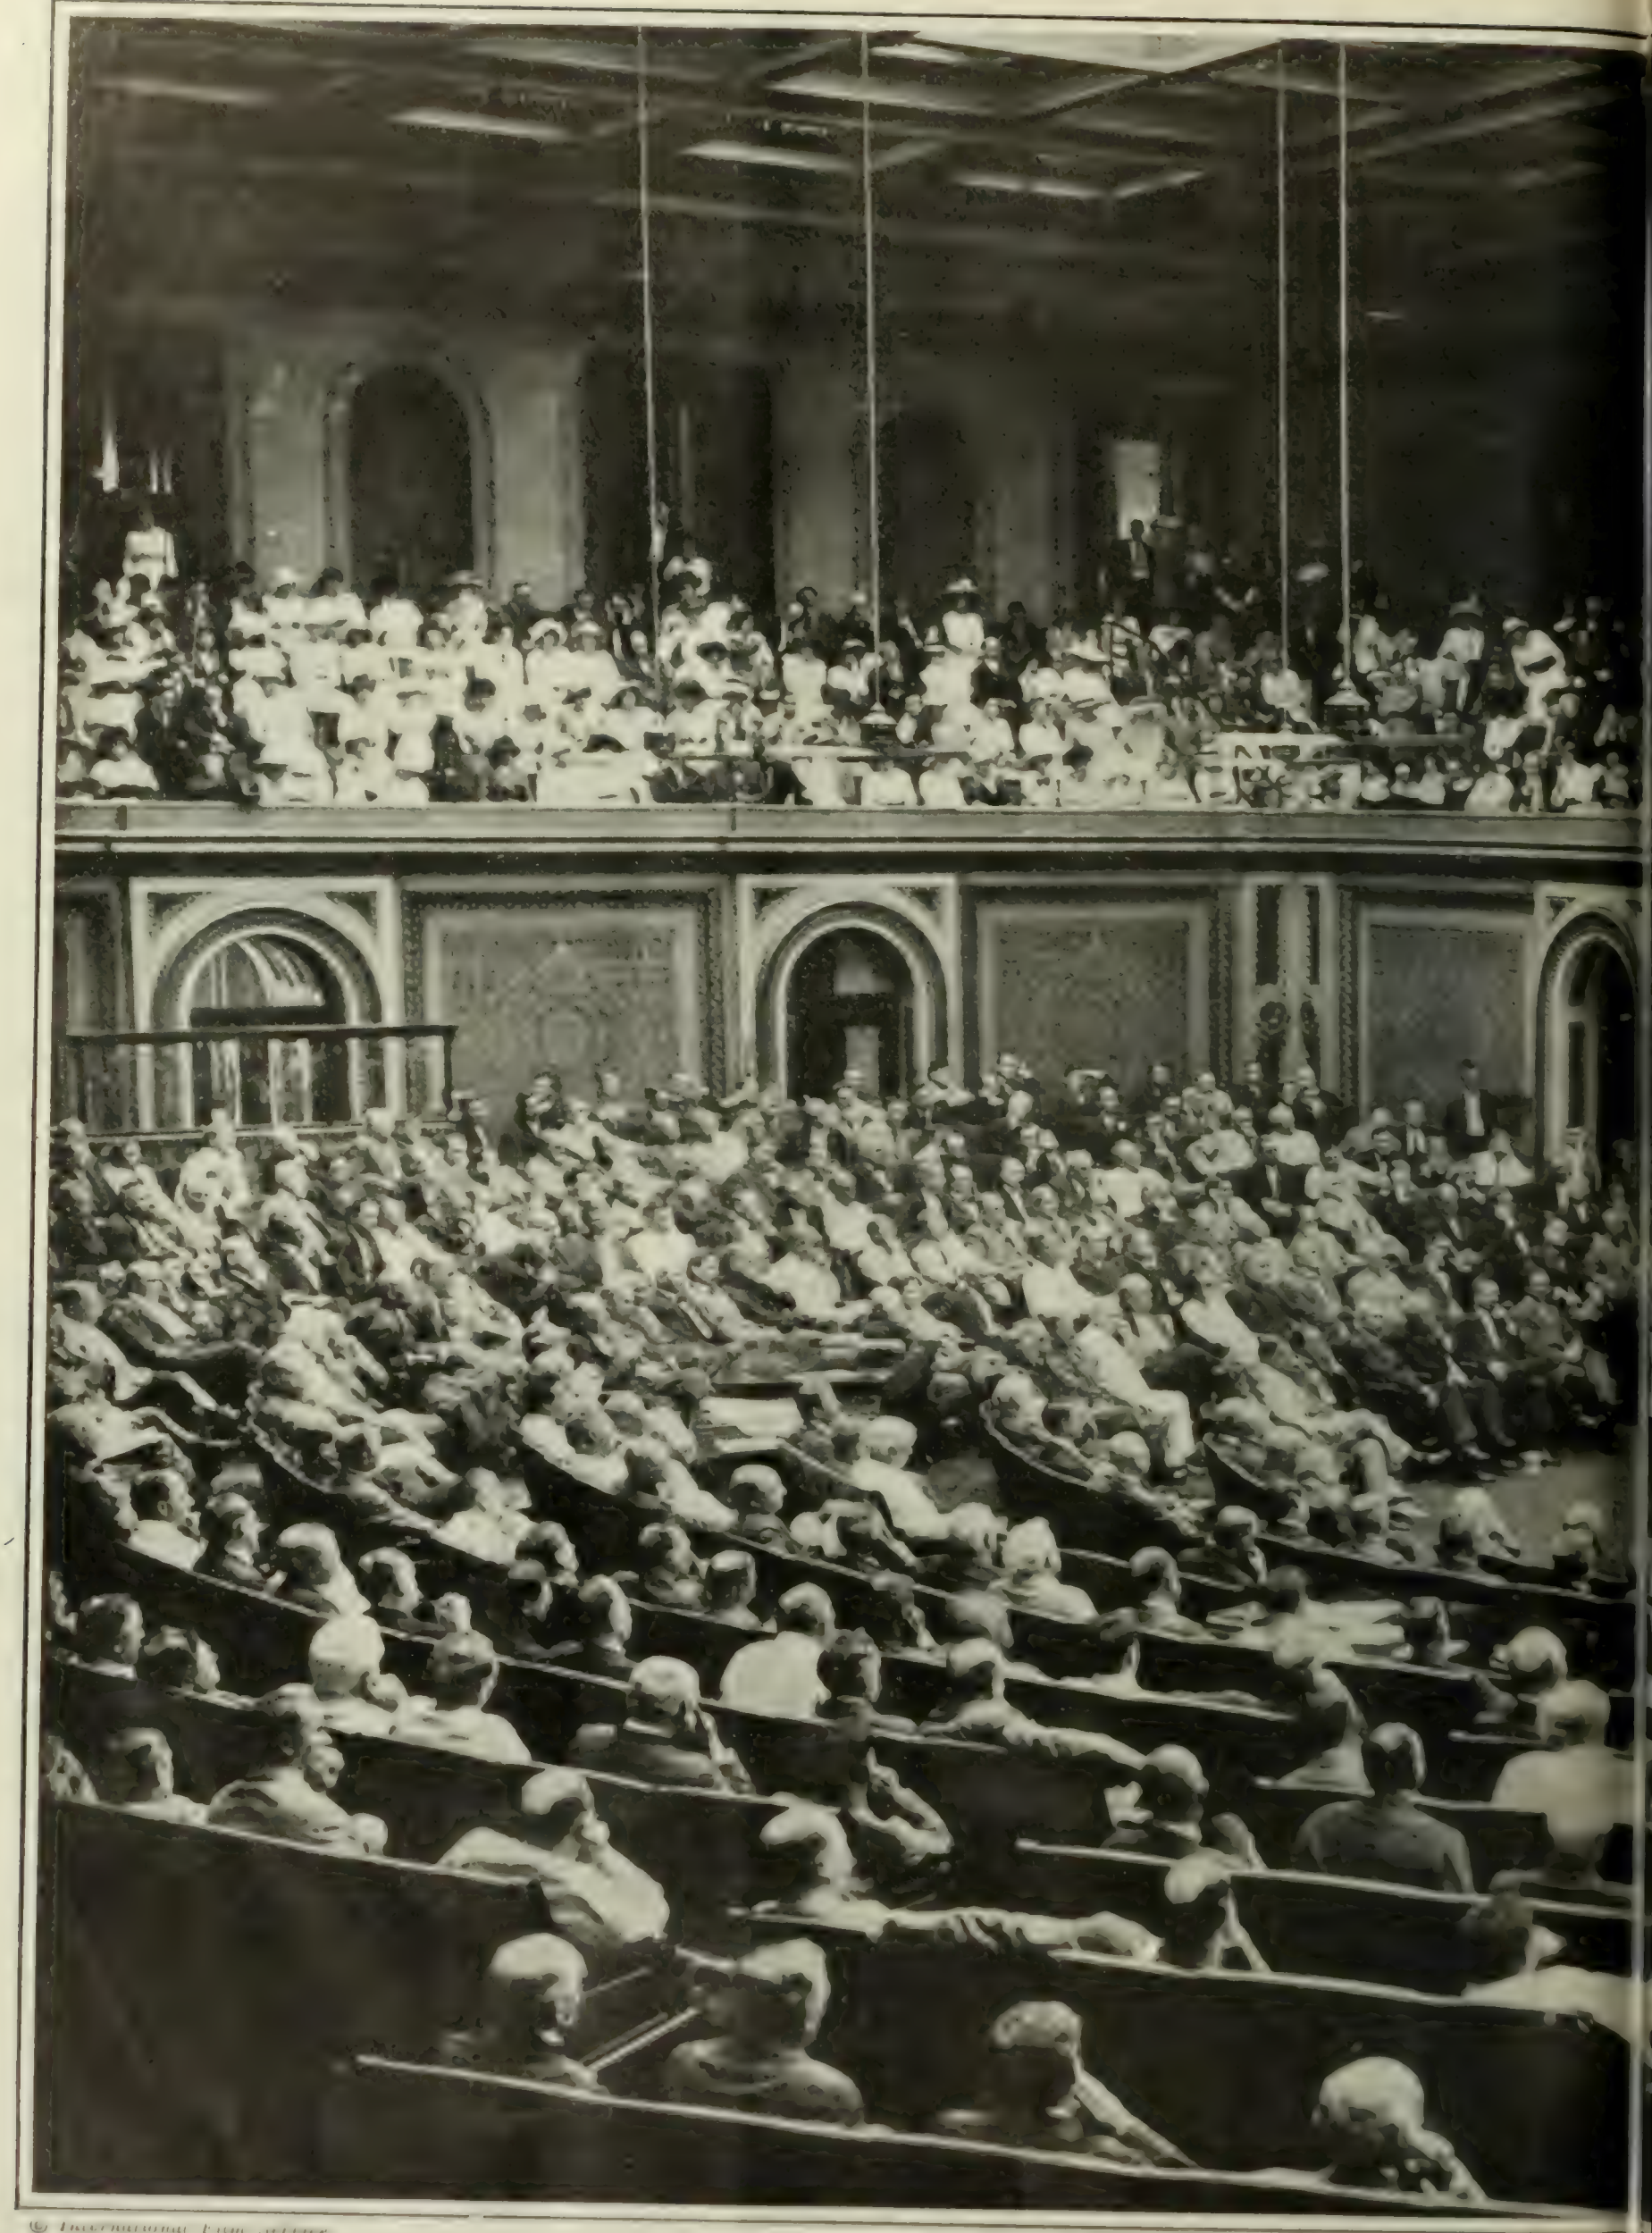
On shore the station bell was clanging and men were assembling on the wharf; strong, well-built fellows they were, many of them half naked and sharpening the blades of murderous-looking knives. With them mingled dozens of women and girls clad in tight blue trousers and kimonos, each armed with an iron hook or with carrying racks slung over their shoulders.

SHOOTING THE HARPOON

In a few moments the rattling steam winch had brought the whale close in shore, a steel-wire cable was looped about the tail just in front of the flukes, and the huge carcass drawn slowly upward over the end of the wharf.

As it rose the eager cutters attacked it savagely with their long-bladed knives, slicing off enormous blocks of flesh and blubber, which were seized by "hook-men" almost before they fell, past to the women, and drawn to the back of the platform.

The scene was one of "orderly confusion"—men, women and girls, laughing and chattering, running here and there, sometimes stopping for a few words of banter, but each with his or her own work to do. Above the babel of sounds the strange, half wild, meaningless chant, "Ya-ra-an-ra-sa," rose and died away, swelling again in a fierce chorus as the sweating, half naked men pulled and strained at a great jawbone, or swung the hundred-pound chunks of flesh into the waiting hand-cars, which carried them to the washing vats. Sometimes a kimono-clad, bare-footed girl slipt on the oily boards or treacherous, sliding blubber-cakes and sprawled into a great pool of blood, rising amid roars of laughter to shake herself, wipe the red blotches from her little stub-nose, and go on as merrily as before.



Almost every night we would be awakened by the siren whistle, bringing the news of more whales, and long before the carcass had been dropt at the wharf, paper lanterns, flashing like fireflies, would begin to shine and disappear among the thatched roofed cottages and the crowd of villagers gather at the end of the wharf. Half naked men, child-faced geishas, and little youngsters carrying sleeping babies as large as themselves strapped to their backs, formed a curious, picturesque, ever changing group.

Fires of coal and fat in iron racks along the wharf threw a brilliant yellow light far out over the bay filled with whale ships, heavy, square-sterned fishing boats and sampans, and gave weird, fantastic shapes to the cutters as it glistened on their dripping knife blades and danced over the pools of blood. But the cutting always went on as quickly as in the daytime, no matter what the hour or weather, for the meat and blubber must be hurried on board fast transports and sent to the nearest city to be sold in the markets and peddled from house to house.

THE PRESIDENT ADDRESSES THE

ESS ON THE STATE OF THE UNION

THE FAST CURE—FOR FASTING

BY ONE OF THE CURED

WHAT housewife could resist such a temptation? No meals to get and no dishes to wash, no marketing to do and no accounts to balance! Of course, I said yes when the Scientist suggested a fast for a week.

He had conceived the idea that science was not sufficiently informed of the results of fasting, and that the college vacation was a propitious time to contribute some further crumbs to knowledge.

Of course, science would want to know the exact measure of our increased capacity and genius. So the Scientist arranged an elaborate set of tests for each day at his laboratory. We measured our strength, our steadiness and our fatigue in physical ability; our memory, our perception and our speed in mental processes; and we measured our varying sensibilities to touch, taste and smell, beside recording volumes about our feelings as we surgically dissected them.

Our program prescribed one week of gradually diminishing in quantity the three meals a day, so there would be no sudden plunge from luxury into the ethereal soul diet; and a corresponding readjustment to the temptations of the delicatessen and the summer market. This added to the fast four days of liquid diet of an egg and a pint of milk.

We maintained our ordinary civilian life and duties, including some very heavy manual work, during the first four or five days of our descent, and were surprized at not greatly missing the usual food. But by the sixth day I was so inexpressibly weary that I dragged myself home like a prisoner wearing ball and chains. I felt like a flower that has begun to droop for lack of water.

With us, however, there was no lack of water, for in another day that was all we were to take, and tho we could have all of this we wanted, and were scheduled to use at least three pints, we turned from it with great aversion as from a medicine.

Yet I was not hungry. Had food been placed before me, I could not have eaten. Like a sick cat, I longed to lie idle, dreading nothing as much as having to change my position.

Day by day our weight fell off in amounts varying from three-fourths of a pound to three pounds and a half, till I hated to look at my husband because he suggested the grinning skull and cross bones used to scare people from courting death out of a poison bottle. And I stopped looking at myself in the mirror for fear of arousing too much self pity.

About the seventh and eighth days we were hysterically giggly, but after that a team of horses could not have dragged a smile out of us, nor could a tragedy have brought a tear to our dull eyes. We were emotionally dead, and the hours dragged on endlessly, like the burning boredom that has trapped a sailing vessel in the calm of a tropical sea. With regret we heard the alarm clock sound in the morning, and with procrastinating lassitude dragged ourselves into our clothes. The cold plunge of the morning bath had always before seemed the acme of physical pleasure; but no longer did the heat feel hot or the cold feel cold.

The monotony began to fill us with terror. It was so big and adamantine, so thick and impenetrable. Hope died. Interest died. Our whole mental and spiritual life died, till we did not care whether tomorrow came or not.

We had not eaten a morsel for five days, and our journey led us past food stores and bakeries everywhere, but we experienced no hunger. Never again can I be persuaded that the tales of starving outcasts eager to devour each other are more than the melodramatic figment of a sensational imagination. Food! It was the last thing on earth I wanted.

On the fifth day of complete fast the tide turned. I knew the spell had been broken when the Scientist began to grumble. "There wasn't a comfortable chair in the house." Life was returning. And I, too, recovered some of my emotions on that day. They came first in an hysterical desire to weep while I was engaged in that most unaffecting task of addition. That afternoon during my nap I dreamed of chopped olives being used as engine packing in a boiler room, and when I woke I was wishing for some carrots and thick beef stew such as the restaurants ladle out by the gallon every noon to starving humanity.

By the last day of the fast, under the encouragement of a dwindling term of servitude, ambition returned in part and I made a feeble attempt to wipe away the dust from my household furniture, but my physical work had been rather poor for the last few days, as my nails were dark with sluggish circulation and my breath was short. Because of our physical inefficiency and low pressure mental ability we had been forced to read aloud during many hours of the last few days, since our plans to maintain a normal working day had largely broken down. But, due to the rebirth of feeling, my nap hour brought no sleep because of a troubled conscience filled with remorse at having wasted so many days out of a busy life.

Being freed from all interest in life had shown certain advantages in the mental tests. After the first two days the novelty of the experiments had worn away and the laboratory work became irksome. But as life became ever more tedious and monotonous, these tasks drew nearer and nearer to the dead level of existence.

During the fast I experienced in a very definite way the uncanny strangeness of a dual self. Thruout the days of most comatose disinterest in life, the mental multiplications did themselves with a speed and accuracy which I can normally never rival. It seemed as tho a second self begged me to stay away and not interfere till she had rapidly and magically recorded the answers. When I insisted upon doing a share of the work, I was slow and clumsy and inefficient in comparison with her. But when I looked back my will power and resigned myself to non-interference, I invariably had the feeling that it was not I who did the problems.

Altho my conscious self did not report hunger during the fast, the idea must have been pretty firmly fixed in subconsciousness, for whenever I stopped guiding my thoughts for a moment, the Mother Goose rimes about Jack Horner's pie and hot cross buns began to romp thru my mind; but most persistent of all was the one about Old Mother Hubbard and her empty cupboard.

I am fully aware we have proved ourselves rank heretics in not finding in fasting the lauded joys which its prophets foretell in their diligent attempts to institute it as an annual national custom more needed than Christmas or Fourth of July, because it is to preserve the health of our people and add to the birthright of our posterity.

The fervent religionists may call down curses upon our faithlessness, and the popular scientific enthusiasts may rail at us fanatically as nonconforming pretenders, yet it is only my arch enemy whom I would persuade to enter upon a week of sterile senility unpunctuated by the joy of eating.

Fasting has cured us of only one thing—*fasting*.

New York City

CHINESE MINISTER TO THE UNITED STATES

Dr. Vi-Kyuin Wellington Koo, just appointed by President Yuan Shih-Kai, is the youngest diplomat at Washington. He was graduated from Columbia University in 1909 and received his degree of Doctor of Philosophy in 1912. Dr. Koo took an active part in the recent Japanese-Chinese negotiations at Peking and was chosen Minister to Mexico last August. He has a keen knowledge of American affairs as well as a thoro understanding of China's ideals and aspirations

THE MOVING WORLD

A REVIEW OF NEW AND IMPORTANT MOTION PICTURES

THE GENTLEMAN FROM INDIANA

The "Pallas Pictures," which are being shown for the first time on the Paramount Program, have a double appeal to popular interest. The novel readers will want to see the film because it is a dramatization of Booth Tarkington's book "The Gentleman from Indiana," and the play-goers because of Dustin Farnum's acting. Neither will be disappointed. The college football game and the raid on the White Cap cross-roads provide thrilling scenes and the Middle West types are presented without that grotesque exaggeration that disfigures most country life plays. The photographic effects are exceptionally fine and we have no criticism to offer, except that the plot in the last reel would probably be unintelligible to one who had not read the story.

THE TRIANGLE PLAYS

It will take some time for the public to find out that the "Triangle Plays" are not sex-problem dramas but first class plays of varied character produced by well-known actors under the management of a new combine of three of the most enterprising of American film-makers, Griffith, Ince and Sennett. It is a striking evidence of the rise of the "movies" to see $2 a seat willingly paid for an evening of the Triangle Plays at the Knickerbocker, while "legitimate" houses near by have come down to $1.50. Each program presents three or four plays of different kinds, usually a spectacular play by D. W. Griffith, an emotional drama by T. W. Ince and a knockabout farce by Mack Sennett, whose work is more remarkable for daring feats and ingenious photography than for real humor. We have space to mention only a few of the more interesting.

Dustin Farnum in *The Iron Strain*, which is "The Taming of the Shrew" in an Alaska setting. The ancient custom of marriage by capture, supposed to be bad form and indeed criminal nowadays, is revived by a cave-man from Yale.

Douglas Fairbanks in *The Lamb*. A fool play but good photography. A battle between Mexicans and Indians and an American invasion of Mexico gives Griffith of "The Birth of a Nation" a chance to display his talents as a field marshal. If Griffith does not watch out some one will be calling him "the Hindenburg of the Moving Film."

In Texas San Jacinto Day is celebrated with more enthusiasm than the Fourth of July, but the east needs educating on this part of our national history. *The Martyrs of the Alamo* will serve that purpose, for it gives a vivid picture of the fight for the freedom of Texas. There stands Santa Anna, who vows never to rest until Texas surrenders. Eagerly we watch Crockett and "Silent" Smith, Travis and Bowie withstanding the onslaught of the Mexicans, and we long like them for the arrival of General Houston's reinforcements, which come only when "Death and Santa Anna hold the Alamo." Then we see the battle of San Jacinto, and finally we can cheer the triumphant Houston with the treaty liberating the Lone Star State.

Old Heidelberg stands translation to the screen without losing its immortal pathos of youth, and Frank Keenan in *The Coward* proves that in effects produced by facial expression the photoplay has the advantage over the stage.

The Ince drama of the Pacific, *Aloha Oe*, is chiefly remarkable for its magnificent spectacle of a volcano in action and a shipwreck in a storm. The natives of a tropical island, threatened with a volcanic eruption, sacrifice the beautiful daughter of the chief to the fire god Pele. But the shipwrecked hero arrives in time to rescue the girl from the deadly volcanic fumes, to be mistaken by the tribe for the son of the god of the volcano and to be accepted as a divine bridegroom.

A Submarine Pirate, by Mack Sennett, is a most remarkable illustration of what the camera can do and what people will consent to do for the camera. Sandwiched into a trivial farce there are such remarkable features as a police chase from the top of one skyscraper to another over narrow girders, an escaping villain dropt from the air by a traveling crane on to the top of a moving automobile, the submergence of a submarine and the actual and visible sinking of a ship by a torpedo.

FLOWERS ALIVE

When films such as *The Birth of a Flower* (Urban-Colonial) and *How Winter Flowers Bloom* (Pathé) were first shown on the screen, the admiration of their beauty was coupled with wonder that a mere mechanical process could reproduce within a few minutes' compass that which, spread over hours or days, was practically invisible to us. With each successive viewing of such pictures, there is an added sense of wonder, no longer at the inventive skill that has made such marvels possible, but at the manifestation of life itself. The rose bares her golden heart to the sun, the daffodils sway and unfurl like exquisite dancers, living embodiments of the poet's lines. Yet before these beauties and graces can be accomplished, there may have been a bitter struggle. The writhing stems of the cyclamen shoulder each other, the tight-furled buds strike one at another like the heads of snakes, each blindly but surely seeking the light. Only after patient and persistent effort can the delicate blossom flaunt her snowy loveliness on high. Presented with fitting musical accompaniment, rising to a climax with the triumphant unfurling of the flower, this film was a true drama of life itself.

THE OTTER

From an observation chamber constructed beneath the water, the camera has caught the otter in his tireless pursuit of his prey. First, we are shown the gravelly bottom of the stream where fish are peacefully resting. There is a shadow, a scuffle in which we get vivid glimpses of a snake-like body diving and twisting; then up thru the troubled waters emerges the otter, a huge fish in his mouth. Other views show him scenting alarm, taking refuge from pursuing dogs among the rocks on the shore, escaping and finally settling down on a sunny boulder to enjoy his hard-earned meal. (Urban-Colonial.)

GUIDES TO THE PHOTOPLAY WRITER

The sudden opening of a new and immense field for dramatic writing was followed by a rush of ambitious young authors in this direction. The demand for scripts was wide and the pecuniary reward—for somebody—was great, but those who attempted to enter this field soon found that it was not so easy as it seemed. They discovered that the motion picture was a new art, with opportunities and limitations of its own and that the technique of the short story or of the stage play did not altogether apply. Then, too, as the business became systematized, the producers became more strict in their requirement that acceptable scenarios should be in usable shape.

Hence arose the need for books of instruction as to the composition of screen plays and the proper form of manuscript. Two such books have recently been published very similar in purpose and character: *How to Write for the Movies*, by Louella O. Parsons (Chicago, McClurg, $1), and *Photoplay Scenarios*, How to Write and Sell Them, by E. H. Ball (New York Hearst International Library, 60 cents). Both authors have had experience as editors in prominent producing companies. Both volumes contain sample scenarios, analyzed and criticized, and both give general advice as to the selection of subjects and developing the themes. Either book will serve the purpose of the amateur writer, but if we must choose between them we should say that Parson's *How to Write for the Movies*, tho costing a little more, is considerably the more valuable, since it is more thoro and comprehensive.

THE CENTAUR OF THE WEST

The popularity of the Wild West shows extends from Paris to Fiji, but the kind of horsemanship displayed on the screen by urban actors is often amusing to the native westerners. But, as the above picture shows, D. W. Griffith has done better in the Triangle play, "The Martyrs of the Alamo," which we review this week, tho even his rough rider is "pulling leather"

THE NEW BOOKS

THE DELIGHTS OF GARDENING

The author of *My Growing Garden* is by vocation head of one of the notable printing establishments of the country, by avocation President of the American Civic Association and enthusiastic advocate of community beautification, by hobby photographer and gardener. It is no wonder then that the book is well printed, that the many pictures, some of them finely colored, are of unusual quality, and that the book smells of the garden. The book records the author's success in creating in five years a beautiful garden out of a run-down homestead of two acres. It is not a gardener's guide book, such as could be gathered from Bailey's Encyclopedia of Horticulture, but is a record of unflagging enthusiasm and successes and failures. It is admirably written, good to read aloud, and brimming over with love of flowers and vegetables and trees. It carries the feeling of being written by a man rather than a woman, and yet a man who has all a woman's sensitiveness to beauty. For suggestiveness and the inspiration of joy in the garden this book cannot be surpassed in the long list of garden books. It has the unusual merit of a very full index. The author knows what the garden supplies that is good for the table, as well as the wealth of flowers it affords, but we may be allowed surprize that he does not seem to have any knowledge of the parsnip, the richest of all root crops. And we cannot guess why under a heavy shade tree he should have planted a common buttercup instead of one of the fine evergreen runners such as Vinca, Pachysandra or Galax.

My Growing Garden, by J. Horace McFarland. Macmillan. $2.

BALFOUR A PRAGMATIST

The Right Honorable Arthur James Balfour, now First Lord of the British Admiralty, is almost as well known to the educated public by his work in philosophy as by his work in statecraft, and it is possible that his eminence in the former field is somewhat more secure than in the latter. His series of Gifford lectures, delivered last year before the University of Glasgow, now collected under the title *Theism and Humanism*, place him definitely with the modern pragmatists and pluralists, as the following paragraph indicates:

> When . . . I speak of God, I mean something other than an Identity wherein all differences vanish, or a Unity which includes but does not transcend the differences which it somehow holds in solution. I mean a God whom men can love, a God to whom men can pray, who takes sides, who has purposes and preferences, whose attributes, however conceived, leave unimpaired the possibility of a personal relation between Himself and those whom He has created.

The reader of this volume will be pleased to discover that Balfour shares not only many of the opinions of James, Schiller and Bergson, but also their humor, simplicity, concreteness and charm of style.

Theism and Humanism, by Arthur James Balfour. Doran. $1.75.

CONFESSIONS AND IMAGININGS

It is rarely possible for any man, even a great one, to reveal the deepest impulses and experiences of life, tho the more superficial reactions of the mind and spirit may be easily expressed. One reverts to such considerations in reading the anonymous *Confessions of a Clergyman*, evidently published for the sake of setting forth various criticisms, more or less just, of churches, seminary methods, and certain modern phases of preaching and pastoral work. A portion of the book seems to ring true as a fairly accurate description of the experiences of the early life of a minister in one of our important denominations. The author looks back on those days with the genial humor of one who has become disentangled from the web of clerical troubles and anxieties. His delightful stories of school and college, of seminary days, and early pastorates, are filled with good natured jibes at the curriculum, the dry-as-dust teaching, "the consensus of the best German critics," and a vein of gentle satire against the narrowness of churches and the hard conditions imposed upon young clergymen. At this point in the "confessions" experience is evidently replaced by the imagination, and an attempt is made to set forth the ideal church and minister on the background of present realities as they are conceived by the author. This attempt naturally includes a criticism and scourging of some of the glaring faults of organized Christianity, altho many alleged weaknesses and failures are much magnified. The chapters, however, are always interesting and entertaining and the volume is well worth wide circulation. Between the lines one reads that the author is an Andover man of the nineties, who labored in the ministry for a short period, and has since become a well-known literary writer and contributor to New England periodicals.

Confessions of a Clergyman. McBride, Nast. $1.50.

FOR CHRISTMAS

The First Christmas Tree, by Henry van Dyke, is out in a new edition for the holidays. Scribner. 50 cents.

The Puppet Princess, by Augusta Stevenson, is a pretty Christmas play for children to act, with plans for costumes worked out in crêpe paper. Houghton, Mifflin. 50 cents.

The Folly of the Three Wise Men, by Edgar Whitaker Work, is a happy story founded on the journey of the three kings to Bethlehem. Doran. 75 cents.

Jimsey, the Christmas Kid, by Leona Dalrymple, tells of a waif's Christmas visit to a "first citizen" and what came of it. McBride. 50 cents.

Christmas Candles, by Elsie Hobart Carlin, contains twelve Christmas plays for children to act, with suggestions for training and costumes. Holt. $1.50.

The First Christmas, arranged by Harold Speakman, from the accounts in St. Matthew and St. Luke, with its colored illustrations, and its borders and initials in gold, is an uncommonly attractive booklet. Abingdon Press. 50 cents.

Ancient English Christmas Carols, 1400-1700, collected by Edith Rickert, puts in a handy volume not only the carols still popular today, but those quaint and often lovely verses known to few save students of folk lore. Duffield. $1.25

Christmas in Legend and Story, compiled by E. S. Smith and A. T. Hazeltine. A discerningly selected collection of Christmas prose and verse illustrated with good reproductions of famous pictures, a delightful little library of legends, poems and idyls by some score or more of writers, ancient and modern. Boston: Lothrop, Lee & Shepard. $1.50

HOW TO ACHIEVE PEACE?

The essay by Gaius Glenn Atkins which won the thousand dollar prize in the competition promoted by the Carnegie Church Peace Union is a thoughtful, clear and forceful presentation of the causes of war and the means by which they may be eliminated. The difficulties that must be overcome in securing a world peace are indicated by the title of the essay, *The Maze of the Nations and the Way Out*. The methods of promoting peace have, until the present, been inadequate and the forces making for war have been fundamental and strong. A thoro grasp of this situation is necessary to an adequate plan of advance. The author considers peace to be a positive rather than a negative achievement. War is a far easier means of settlement in cases of dispute than the patient and toilsome establishment of wisdom and justice. To face economic, social, and racial problems with bravery and determination often means the surrender of fancied rights and arrogant ambitions. The higher state of equilibrium, where great contending forces are reconciled and held in nice adjustment, can only be brought about when some of war's roots are cut and its causes removed. Among these causes are a false philosophy of life and militarism itself. The latter, Dr. Atkins defines as a deification of force, an organization of pride and intolerance into corps, brigades and divisions. Militarism may be dealt with by eliminating private gain from war preparation and war making, the limitation of arma-

ments, the taking of risks for the sake of peace, and the promotion of the ideal of universal disarmament.

The Mass of the Nations and the Way Out, by Gaius Glenn Atkins. Revell. 75 cents.

CHANGES IN OUR GOVERNMENT

How the American political system grapples with modern social and economic problems is the main theme of Professor Young's able and interesting book, *New American Government and Its Work*. He finds executive leadership in state and nation the striking factor in present day politics. This he attributes to the growth in the importance of foreign politics and the tendencies towards centralization which have bred a race of strong presidents like Cleveland, Roosevelt and Wilson, who have fully appreciated the new importance of their office.

A most commendable feature of the book is a thoro discussion of the state government and its problems. The state rather than the nation is destined to become the American social laboratory. But before this takes place, there will have to come a systematization of departments and bureaus which are now in a chaotic and archaic condition in almost every state in the Union. The rise of strong governors who have defied party leaders is a significant sign of coming efficiency and responsibility. Once the governor becomes a sort of prime minister who chooses his cabinet and controls the budget, the day of "invisible" government is over. There are some excellent chapters on the state and social legislation, such as factory inspection, child labor, workmen's compensation, old age pensions, etc.

The most striking feature, however, is the discussion on the control of corporations and trusts and the regulation of commerce by the national government. In few other volumes on American Government have these matters been treated so fully, so fairly and so ably. "The Government," says the author, "is the silent partner in every business." He distinguishes four periods of government regulation: (1) The law of 1887, which merely prohibited rebating; (2) the Sherman anti-trust act, which denounced trusts as evils and demanded their abolition. Both efforts failed utterly of their purpose to restore competition. Then (3) came the publicity movement thru investigations by official bodies and reports by the Bureau of Corporations. This was followed by (4) the present method of full administrative control of the activities of corporations thru great commissions with large powers, like the Interstate Commerce Commission, which the author well describes as "the economic Supreme Court of the American transport world," and the recently formed Federal Trade Commission, with its control of all corporations other than transport doing interstate business. In these ways the public is gaining an ever widening control of the economic activities of the nation.

Considering the fact that much of American Government is "unofficial,"

"Quality First" *in* Christmas Gifts *at* McCutcheon's

"Quality first," is a sound rule for Christmas gifts. No matter how little a gift may cost, quality will give it dignity.

A single McCutcheon pure Linen Handkerchief, costing $1.00 in its dainty McCutcheon Spinning Wheel box, is a better present than six cheap Cotton Handkerchiefs for a dollar.

We give below some instances of choice gifts that can be bought at "The Linen Store."

Handkerchiefs

Irish Hand Embroidered Initial Handkerchiefs for Ladies, $3.00 per dozen.
Swiss Hand Embroidered Handkerchiefs, $6.00 per dozen.
Exquisitely Hand Embroidered and Scalloped Madeira Handkerchiefs, $3.00 per half dozen.
Men's Initial Handkerchiefs, $3.00 per dozen.
Children's Initial Handkerchiefs, $2.00 per dozen.
Lace or Hand Embroidered Handkerchiefs, $5.00 to 25.00 each.

Fancy Table Linens

Hand Embroidered Tea Cloth, $5.00.
Hand Embroidered 24 inch Centrepiece, $2.00.
Hand Embroidered 24 inch Cluny Lace Centrepiece, $3.00.
6 inch Spanish Embroidered Doylies, $6.00 per dozen.
Madeira Tea Napkins, $6.00 per dozen.

Ladies' Neckwear

Guimpes, Vestees, Collars, many dainty conceits at $1.00, 1.50, 2.00 to 5.00.

Mail Orders receive prompt attention.

WOMAN'S HORIZON

AMERICAN women have emerged from the home and swept, in a restless tide, into the Market Place. They have discovered that local and national politics are related to their interests, and have generally manifested an energy which can no longer be absorbed by the mere duties of the housewife. American women are more interested than ever before in the details of the home and its efficiency; but they refuse to have those details limit their horizon.

¶ Today food and clothing are produced principally outside the home, and education is no longer a domestic but a community activity. For the sake of their children women must have a part in the control of conditions under which food and clothing are produced. They must concern themselves directly with the management of the school and the health and morals of the community which forms the shaping environment of their children.

¶ For more than half a century The Independent has consistently advocated equal political rights for women. It has recognized their opportunity and their responsibility for service outside the home. The great development along these lines which has taken place within the last ten years, and the opportunities which are more and more appearing for public service in the interest of all the people on the part of women has keen recognition and authoritative treatment in the editorial conduct of The Independent. Its frequent articles by and concerning the leaders of organized womanhood, its championship of the things for which they stand, add greatly to its value.

The Independent

A JOURNAL OF THE HOUR

i. e., thru party organization, it is rather surprising that Professor Young has treated only in the briefest manner party organization, direct primaries, direct government, etc. Likewise, the entire omission of so important and interesting a subject as municipal government cannot be accounted for.

New American Government and Its Work, by James T. Young. Macmillan. $2.50.

PETRIFIED MARXISM

The conservatism of the average Socialist in the face of a changing universe is well illustrated by *The A B C of Socialism*, written by I. G. Savoy and M. O. Teck. The book is lucid and to the point; no doubt admirably adapted to propagandist work. But embedded in it are all the most ancient and questionable party dogmas—that the middle class is still disappearing, that economic misery is increasing, that all industries are being rapidly engulfed in the maw of the "Trusts" and that Marx's labor theory of value is impregnable. The revolt of the Revisionists against Marxian orthodoxy is ignored, the Syndicalists are dismissed with a word, and while the Great War is denounced as a capitalist conspiracy, the relapse of practically the whole body of European Socialism into fervent national patriotism is completely overlooked.

The A B C of Socialism, by I. G. Savoy and M. O. Teck. Boston: Badger. 50 cents.

AS THEY PAINT THEMSELVES

If we believed that the Russian people were as bad as Artzibashef depicts them in his former novel, "Sanine" and his new one, *Breaking-Point*, we should pray that Hindenburg exterminate the race.

Huebsch. $1.40.

LIFE OF A RANCH WOMAN

Letters on an Elk Hunt, by Elinore Pratt Stewart, is a second series of the vivid "Letters of a Woman Homesteader." They describe informally and delightfully the adventurous, hardy life still to be had in our North West.

Houghton, Mifflin. $1.

PARENTS' GUIDE BOOK

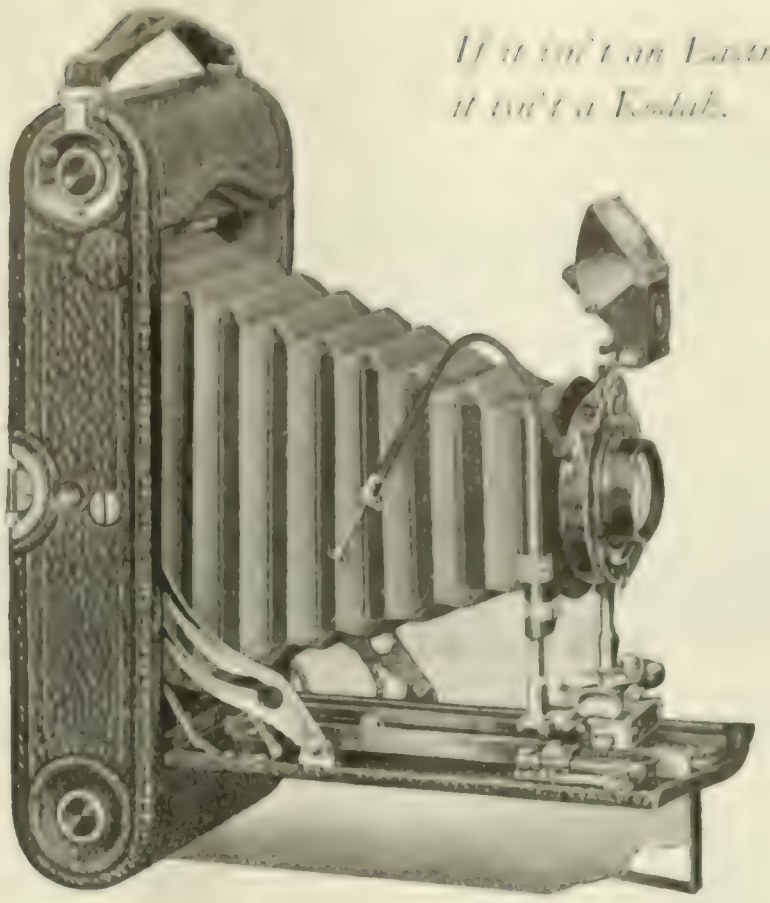
A new edition of Dr. William B. Forbush's *Guide to Childhood* emphasizes the practical value of this handy book of reference. Hundreds of perplexing questions that are continually confronting conscientious parents are answered in the light of psychology, hygiene, educational method, and social needs.

Philadelphia: American Institute of Child Life.

RELIGIOUS MUSINGS OF A LAWYER

Mr. John J. Chapman's small volume of *Notes on Religion*, consisting of essays on the Roman Church, and the Effects of Hebraic Thought on Western Europe, and some shorter excerpts and jottings, is marked by a keen discrimination, breadth of sympathy, and an effective literary style.

New York: Laurence J. Gomme. 75 cents.



SERMONS OF A COLONIAL BISHOP

The sermons which Bishop Brent has put into the volume entitled *Prisoners of Hope*, cover a wide range of subjects and many years of the author's productive life. They represent many of his ideals for church, state and individual, and are characterized by clearness, practicality and force.

Longmans, Green. $1.50.

JAPANESE CHRISTIANITY

The thirteenth annual issue of *The Christian Movement in the Japanese Empire*, properly the year book for 1915, contains a vast amount of information about the various Christian agencies and organ-

If it isn't an Eastman, it isn't a Kodak.

Holidays are Kodak Days

Every winter outing, every house party and home dinner dance, the Christmas and New Year's festivities—in each of these are fascinating subjects for the Kodak—pictures that make fun in the taking—pictures that will always prove a delight.

Picture taking by daylight or flashlight, is simple by the Kodak method—and it's not expensive now-a-days.

Put Kodak on that Christmas list.

Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation. Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries.

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of	$27,964,578,109.00
Received premiums thereon to the extent of	287,324,890.99
Paid losses during that period	143,820,874.99
Issued certificates of profits to dealers	90,801,110.00
Of which there have been redeemed	83,811,450.00
Leaving outstanding at present time	6,989,660.00
Interest paid on certificates amounts to	23,020,223.85
On December 31, 1914, the assets of the company amounted to	14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

Weavers of Speech

Upon the magic looms of the Bell System, tens of millions of telephone messages are daily woven into a marvelous fabric, representing the countless activities of a busy people.

Day and night, invisible hands shift the shuttles to and fro, weaving the thoughts of men and women into a pattern which, if it could be seen as a tapestry, would tell a dramatic story of our business and social life.

In its warp and woof would mingle success and failure, triumph and tragedy, joy and sorrow, sentiment and shop-talk, heart emotions and million-dollar deals.

The weavers are the 70,000 Bell operators. Out of sight of the subscribers, these weavers of speech sit silently at the switchboards, swiftly and skillfully interlacing the cords which guide the human voice over the country in all directions.

Whether a man wants his neighbor in town, or some one in a far away state; whether the calls come one or ten a minute, the work of the operators is ever the same—making direct, instant communication everywhere possible.

This is Bell Service. Not only is it necessary to provide the facilities for the weaving of speech, but these facilities must be vitalized with the skill and intelligence which, in the Bell System, have made Universal Service the privilege of the millions.

TULLOSS SCHOOL OF TYPEWRITING, 1892 College Hill, Springfield, Ohio

izations in Japan, Korea and Formosa, describing their work, methods and growth. A general survey of Japanese progress and interests has been wisely included, and the latest statistics of the population, commerce and industry are given.

Missionary Education Movement. $1.25.

ARTISTIC BUSY WORK

Mr. H. A. Rankin has prepared a valuable guide to assist children in making their busy work both interesting and artistic. *Lantern Making* contains many designs illustrating and directing practical work of an attractive nature.

Dutton. $1.

THE MODERN NOTE

The present practical trend in Christianity and the emphasis laid upon service and helpfulness form a good atmosphere for the study of such an Epistle as that of James. Professor A. T. Robertson in his *Practical and Essential Aspects of Christianity* has published a fresh and inspiring as well as scholarly exposition of this book.

Doran. $1.25.

LITERARY SIDELIGHTS

Essays on many subjects, keenly interpretative and cleverly stimulating, make up the *Incense and Iconoclasm* of Charles Leonard Moore. Literature is the central theme, but the phases of its treatment are widely varied. Poetic Expression, Modernity in Literature, The Master Note, The Intoxication of Words, Some Hindu Dramas, The Magazine Girls; these are some of the titles that lure the reader on to further enjoyment.

Putnam. $1.50.

MEDIEVAL CATHOLICISM

The Latin Church of the Middle Ages, by André Lagarde, has been translated in the International Critical Library. The topical arrangement of material, altho it secures certain pedagogic values, is misleading to all but the specialist. The author is at his best when describing details of polity and organization, but lacking in historical imagination when treating the more dramatic episodes. The book's most notable lack is references to source material and primary documents.

Scribner. $2.50.

GUIDE POSTS TO THE STAGE

As in his "Continental Drama of Today," Mr. Barrett Clark, in *British and American Drama of Today*, gives an outline of the principal dramatists and their works. In a few pages devoted to each play he indicates suggestively how the dramatic effects have been obtained, and discusses the play's contribution to literature. For the theater-goer or the general reader who wishes to acquaint himself with the modern tendencies of the stage, and a brief outline of its history, the book is invaluable.

Holt. $1.60.

BABYLONIAN MYTHS

We have previously called attention to the discovery in the Museum of the University of Pennsylvania among the tablets brought from Nippur of a number of fragments pieced together of a very early Babylonian myth relating to the Deluge and the Fall of Man. While too technical for the common reader, this careful edition and translation of the *Sumerian Epic* with copious notes by Professor Langdon will be of essential importance to all students of the Old Testament.

Sumerian Epic of Paradise, the Flood and the Fall of Man, by Stephen Langdon. Philadelphia: The University Museum. $6.

THE STORY OF FRANCE

A *History of France*, in three volumes, by J. R. Moreton Macdonald, is a well-written popular history of the older type. That is to say, the trend of events is not regarded so much as the resultant of social and economic forces, but treated rather as incidental to the achievements of prominent personalities, royal or other. Yet the work is no mere string of biographies, for as a background to these leading individuals there is always vividly present the spirit of a nation, the personality of France, dominating the whole.

Macmillan. $6.

Independent Opinions

In an editorial of September 27 we called attention to the controversy now going on in England over the question of what names shall be given to the people of the British empire as a whole and of the different races and countries embraced in it. We also observed that the United States was even worse off in the matter of suitable adjective and substantive forms for its nationals and suggested that the Esperanto word of Usona from the initials of "United States of North America" might serve. The Superintendent of Education of Nova Scotia sends us some interesting comment on this point and also offers an explanation of the mystery of how the *i* got into Canadian and Panamanian:

Your article on "Some Needed Names" was extremely suggestive. Why is it so hard to get some names when "Coniagas" can be thrown on the map and into mining literature at a single stroke, because of the richness of its ores in cobalt, nickel, silver and arsenic, whose chemical symbols are Co, Ni, Ag and As?

For the United States of North America we can neither discover nor invent a name. We are expected to be content with a six-worded phrase as a substitute.

I had been collaborating about the time of your Spanish war with an interesting Bostonian for a compact euphonious name; but nothing neater than your "Usona" was developed. It does not suit the Esperantist perfectly, for it has the adjective termination in a. The noun form "Usonâo" would be regular for him; but we want English. A poet (*ho poietes*) is needed to launch into lilting song:

Usôna, Usôna, the lând of the frée!

Then "The United States of North America" may henceforward have a *name* well adapted to every conceivable purpose except the adjective derivative.

"Canada" is not in competition for euphony:

Cánada, Cánada, lând of the Nórthern lights.

But altho we can speak of the Manitobans and Albertans, no one will allow us to refer to the Canadans any more than to the Usonans.

Why? Because Nova Scotia was so ancient and Nova Scotians so ubiquitous before the Canadian came into the sun, that to be deemed civilized he had to get the European flowing "i" to link on the terminal "an." The Ottawans and Saskatchewans couldn't naturalize the exotic "i," but the Chippewas with some of our writers became "Chippewyans." The "i" link, unfortunately, shifts the accent to the antepenult, and therefore really changes the character of the word.

"Usonan" and "Canadan," if started under favoring auspices, I believe, would be generally considered superior to the words "Usonian" and "Canadian." "Panamanian" for "Panaman" is due to infection from Europe.

For the British Empire "Briton" and "British" appear to be coming to the front. We could hardly tolerate "Britannian," I am sure, altho we recognize the poetic "Britannia." A. H. MACKAY.

Halifax, N. S.

Professor Owen, the head of the Department of English in the National German-American Teachers' Seminary, commends our suggestion that

FOUR SCRIBNER BOOKS

FIGHTING FRANCE
DUNKERQUE TO BELFORT
By Edith Wharton

"The book is a work of art, standing apart, with its inspiration, in all the long row of this author's beautifully finished volumes."—New York Tribune.

"Nothing else that I have read has given me the insight into the French point of view as has this book of Mrs. Wharton's. Hers are the conclusions of a sympathetic and intelligent observer. . . . 'Fighting France' is Edith Wharton's magnum opus."—Miss Gilder in the New York Sun.

Illustrated. $1.00 net.

VIVE LA FRANCE!
By E. Alexander Powell

This book describes, among other things, the bombardment of Dunkirk, the destruction of Soissons, the fighting on the Aisne, the invasion of Alsace, the Battle of Neuve Chapelle, the underground cities, the poison gas, the great French drive, etc., etc. The unusual opportunities opened to Mr. Powell make this a unique record.

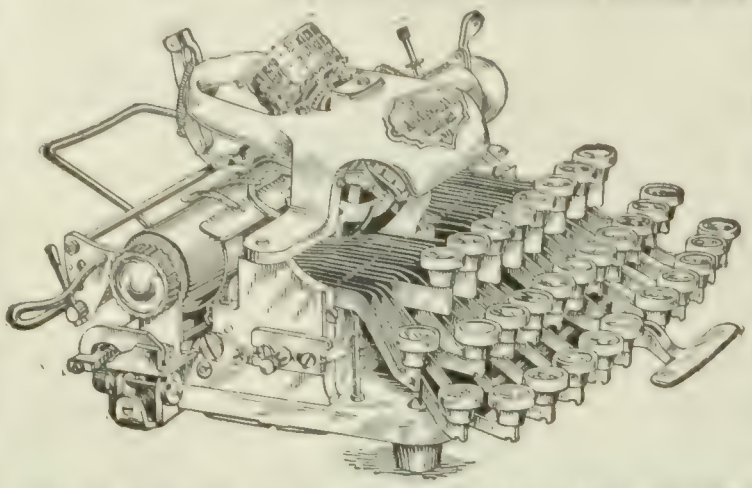
Illustrated. $1.00 net.

HEART OF EUROPE
By Ralph Adams Cram

"This book is glowing lava. It is the product of an artist, a poet, an enthusiast, whose heart is broken by the vandalism of war. . . . No one can read his chapters without a thrill of delight in his fine descriptions, his vivid enthusiasm, his enlightening explanations."—Boston Transcript.

Profusely Illustrated. $2.50 net.

COLOURS OF WAR
By Robert Crozier Long



This book is a remarkable contribution to the literature of the great conflict, not only because it covers a field too little known, but because it is made up of appealingly human experiences and impressions rather than great movements. And, since it deals chiefly with Russia and its armies, it is full of knowledge new to most readers.

"professors of English should undertake such constructive work as the formation and introduction of needed words" and advises that the German method of word formation from native roots be adopted. As will be noticed from his letter he is more advanced in his spelling than we are:

The English language is fortunate in having freed itself from inflections and in having gaind a strong straitforward sentens-structure. But it is unfortunate in having lost its ons vigorus powers of forming new words from its own word-stock. The fact that its vocabulary lies in the fetters of Latinity has impaird the force of English,—has made its abstract, literary, and scientific terms snobbish and *blasé*. To any one but a classicist, that is, to ninety-nine per cent of the peple who speak English, in spite of al the dictionary dril that despairing teachers ons gave him, these terms hav no picturesque fysical, self-revealing denotation.

Hens the dictionary must play an exaggerated part in reading lessons in the scools, and teachers are apt to prais a child for acquiring words rather than ideas. Fysiology, for instance, becoms a study in which the pupil lerns a hundred unintelligible terms of Latin or Greek origin which could easily be replaced by self-explanatory words of English origin, e g., œsophagus—gullet or food pipe; trachea—windpipe; vena cava—great hollow vein. Hens, also, the ordinary man uses many words that he only half knows. In Dutch, German, or Norse these conditions do not exist. Most abstract terms here ar of Teutonic origin and hens ar self-explanatory; e. g. pneumonia—*lungenätcher*; laryngoscope—*kehlkopfspiegel*; regeneration—*wiedergeburt*. Malapropisms ar unknown. Folks ar not obliged to make the dictionary their Bible.

What's to be don? Among literary men the simple Saxon word has grown in favor during the past hundred years. Professor Jespersen in his *Growth and Structure of the English Language* illustrates this by showing how rhetoricians so late as 1850 scarcely tolerated the word "handbook" beside the word "manual." Today we use "handbooks," plan-books," yearbooks." We should take advantage of this movement. Let us secure from the court of public opinion à decree compelling al large universities of our cuntry to establish chairs of Applied Language Scieys, the professors holding these chairs to form a National Language Board which shal work out, on the basis of filology and fonetics, reforms in our grammar and spelling and shal re-create a self-interpreting English vocabulary. That den, the English may becom the world-language.

RALF A. DORNFELD OWEN

Milwaukee, Wis.

The following solution to the British problem is, we presume, not likely to be followed. "Brit" does not have any obvious advantages over "Briton" except that it is shorter and has more rimes. The patriotic poet would delight to match it with "grit," for this Americanism has found acceptance with the mother country.

It seems to me a natural thing that each division of the great British Empire should desire to keep its own individuality and consequently object to being designated as "Britons," which has to the consciousness of the world come to mean the characteristics of the Englishman alone. The Scot has a proud remembrance of his own, the Irishman of his, the Welshman of his, and all are fully conscious under the British flag that the glories they built personally be subsumed into that of the lower half of a small island (to capitals, the Houses of Parliament and the King's castle. As the case goes to which they all belong is "the British Empire," why should not the subjects be called "Britons"? The name, to it might

sound a little harsh at first to the unattuned ear, yet like Celt, and many other names of one syllable, easily lends itself to euphonious usage. The Brit of England, the Brit of Ireland, the Brit of Scotland, the Brit of Wales and the Brit "beyond the seas" would, bearing the same cognomen, come into a stronger sense of homeliness.

RUTH ELIZABETH MCKINNEY

Elgin, Ill.

The Professor of English of Lebanon High School writes in that the editorial in question is "a mighty poor filler" and, in response to our letter of inquiry, explains:

Moreover, I feel that not only is the subject a trivial one, but the treatment of it is hardly otherwise. Assuming that it is of the importance you attach to it, I think we must agree that it is not seriously enough written. To descend to the comparison of the matter in hand with the use of initial-letter compounds and trade-names seems to me to be intolerable. If the sublime idea of patriotism and nationality is really concerned it is almost bathetic to force a place in the discussion for rank materialism as symbolized by these commercial expressions.

HENRY H. BOGGER

Lebanon, Pennsylvania

We appreciate the charity of Professor Bogger calling the editorial a "filler," but we are obliged in all honesty to disclaim that excuse for it. There is no such thing as a filler in modern journalism. Space is so contracted in comparison with what we want to put in it that all articles, letters and editorials are cut down to the lowest possible limit and then we often have to throw out a lot of good stuff at the last minute.

We will not attempt to defend the quality of our editorial, but we insist that the subject is one of genuine importance. The lack of a common name for all the subjects of the English crown is a very real impediment to the centripetal force now active in the empire. As an instance of the exasperation caused by the present situation we quote some verses from the *Glasgow Herald:*

The "English" navy in its might
  Is out upon the main;
The "English" army—some in kilts—
  Is at the front again;
The dogs of war are loosened
  And gathering to the fray,
But the British ships and British troops –
  I wonder where are they?

When blood has flowed like water,
  And 'midst the heaps of slain
Lie stalwart Scot and brawny Celt
  Who victory helps to gain,
The glory will be "England's,"
  Like every other thing;
'Tis "England" this and "England" that—
  Flag, navy, army, king.

Still let Scots do their duty
  In Britain's day of war;
A greater cause than "England's"
  Nerves Scottish hearts by far.
For Britain and the empire
  We Scotsmen draw the sword,
And not like hired mercenaries,
  As if "England" were our lord.

Evidently the Scotch and Irish resent the assumption that England is the British empire just as the Canadians and South Americans resent the assumption that the United States is America. Their resentment is natural, but in both cases it is a deficiency of the language which is responsible.

POULTRY SECRETS DISCLOSED

We offer to all poultry raisers the essential knowledge and secret methods of many of the most successful poultrymen of America. As a rule these secrets have been guarded with extreme care, and it is only then that the great successes have been built. They will cost YOU only a trifle and a few minutes to write us.

How We Obtained These Secrets

Michael K. Boyer, Associate Editor American Poultry Advocate, has had exceptional opportunities and the closest friendship with poultrymen all over the country. They have freely told him many of their most jealously-guarded secrets, many others we have bought, and the scattered material together with several of Mr. Boyer's own valued methods, has now been collected in book form. It must be clearly understood that **every secret has been obtained in an honorable way.**

"POULTRY SECRETS"

First published in 1908, this collection of the carefully guarded secrets of famous poultrymen created a sensation in poultry circles. It has run through fourteen editions, and is still selling at a lively rate.

Contents

SECRETS OF FOWL BREEDING—Lambert's Secret of Breeding Fowls. Mating. Heimlich's Secret of Hatching. Secret of Mating Males to Females. Secret of Mating Non-Setters to Females. Hen Secrets. Mammoth Chicken Secret of Hatching More Pullets than Cockerels. Drews' Secret of Raising Every Chick. Bullock's Secret of Breeding the Cackle on a Rose Combed Fowl.

SECRETS OF FEEDING—Secret of Feeding Grains. Dr. Woods's Laying Food Secret. Feeding Linseed Meal. Feeding Meat and Suet. Porter's Salt Secret. Brackenbury's Secret of Scalded Oats. Feeding Charcoal, Grit and Oyster Shells. Secret of Green Feed. Secret of Feeding Fifteen Cents per Bushel. Sprouted Barley Secret. South's Secret of Preserving Vegetation in Poultry Runs. Important Feeding Secret. Miscellaneous Feed Pointers. Chick Feed Secrets. Seay's Secret of Dry Bran Feeding. Gowell's Fattening Secret. Gray's Fattening Secret. Greiner's Corn Feeding Secrets. McGrew's Secret of Feeding During Moulting.

SECRETS OF HOUSING AND CARE—Secret of Successful Yarding. Secret of Feeding the Laying Hen. Secret of 240 Eggs per Hen per Year. Lawney's Secret of Insect Killers. Secret of Successful Moulting. Zimmer's Secret of Securing Foster Mothers. Broody Hen Secrets. John Robinson's Secret. Secret of Chicks Dying in Shell. Secret of Scaly Leg Cure. Secret of How to Hold a Fowl. Blanchard's Secret of Stopping Cocks from Crowing at Night.

Is this cock properly held? "Poultry Secrets" tells you how to carry fowls, and scores of secrets far more important and hitherto unrevealed.

EGG SECRETS—Brown's Secret of Preserving Eggs. Secret of Killing the Fertility of Eggs. Secret of Obtaining Winter Eggs. Secret of the Angell System. Secret of Eggs All the Year. Secret of Having Perfect Eggs. Kohr's Secret of Selecting Layers. Kulp's Secret of Producing Great Layers. Professor Rice's Fat Hen Secret. Crane's Secret of Holding Eggs for Hatching. Boswell's Secret of Testing Eggs. Dr. Woods' Egg Hatching Secret.

15th Edition Now Ready, Revised and Up-to-date

MARKET SECRETS—Judging the Age of Dressed Poultry. Secret of Dressing Fowls. Secret of Celery-Fed Broilers. Secret of High Priced Stock. Truslow's Secret of High Prices for Ducks.

SECRETS OF EXHIBITING—Drevenstedt's Secret of Exhibition Fowls. Heimlich's Secret of Exhibition Fowls. Zimmer's Secret of Line Breeding. Rigg's Secret of Uniform Markings. Marshall's Secret of Training Show Birds. Lambert's Method of Growing Good Tails. Heck's Secret of Adding Exhibition Weight. Fishel's Secret of Preparing Fowls for Early Fall Shows.

Read What Purchasers Say

I received Farm Journal and "Poultry Secrets," and am very much pleased with both. The secrets are worth their weight in gold. Why, I paid $5.00 for the second-rate one I had. You certainly give a million over his money's worth.

Andrew J. G. Morey,
Utica, N. Y.

I purchased a copy of "Poultry Secrets," and find many helpful ideas in it, especially Dr. Woods' Egg Hatching Secret.

Mrs. F. T. Darnell,
Westfield, Ind.

By putting within our reach these "Poultry Secrets," you are doing a more philanthropic work than giving alms or endowing hospitals, for you make it possible for us to make both ends meet.

L. Boyce, Milwaukee, Wis.

Received your book of "Poultry Secrets." It's an exceptionally instructive work, and worth $10 to any progressive poultryman. I would not care to take that for my copy if I could not get another.

Robt. F. Kingsland,
Montville, N. J.

The Farm Journal came to hand, and later "Poultry Secrets" also arrived. I was very glad to receive them and have been greatly interested in them. You are doing a glorious work in diffusing such valuable knowledge for so little money.

F. B. Meade, Boston, Mass.

As to "Poultry Secrets," I will say, I have lectured on this subject over the greater portion of this state for the past 15 years, and have about every book that is published on this subject in my library. I consider this book the most valuable I know for the general public. L. A. Richardson, Marine, Ill.

Profusely illustrated, with many fine drawings and diagrams. 64 pages

HAVE YOU USE FOR SUCH A BOOK? THEN READ THE OFFER BELOW

The POULTRY SECRETS BOOK is sold in combination with the Farm Journal, Philadelphia.

The FARM JOURNAL is the standard paper for everyone who lives in or near the country, or ever has, or ever expects to. A particularly fine poultry department, more valuable than most poultry papers, 37 years old, 1,000,000 subscribers and more. Goes everywhere. Clean, clever, cheerful, amusing, intensely practical. Cut to fit everybody, young or old, village, suburbs, or rural routes. Unlike any other paper and always has been.

AMERICAN POULTRY ADVOCATE, the great New York State paper, published at Syracuse, and full of good reading matter, is always welcomed by the subscriber. Now in its 22nd year. It is conceded to be one of the best poultry papers published in the United States. Well edited by recognized authorities on the subject of practical poultry raising. Has a guaranteed circulation of 45,000 copies per month.

SPECIAL OFFER For $1.25 (cash, money order or check) we will send postpaid the POULTRY SECRETS BOOK and the FARM JOURNAL for four years, and AMERICAN POULTRY ADVOCATE two years, all for $1.25 (to Canada $2.25, foreign countries, $2.75, to Philadelphia, Pa., $2.05), if order is sent at once to

AMERICAN POULTRY ADVOCATE, 616 Hodgkins Block, Syracuse, N. Y.

YOUR INVESTMENT

in a

NEBRASKA FARM MORTGAGE

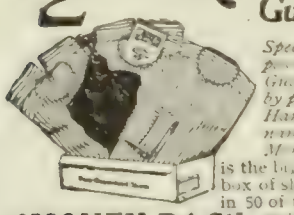
combines the three great factors in the ideal investment—

Safety
Return
Convenience

Located as we are in the center of the great farming, dairy and cattle raising belt of this fertile State, we are able to make loans with full knowledge of the circumstances surrounding each.

Any investor wishing to deal with a thoroughly responsible house should write us for details.

Our Booklet—"A Farm Mortgage"—sent upon request.



FIDELITY TRUST COMPANY

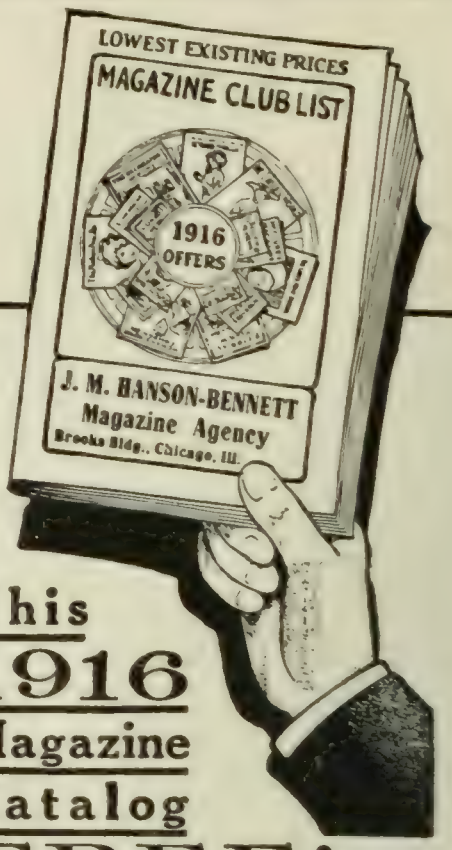
E. T. [illegible], Secretary & Treasurer.

Insurance

Conducted by

W. E. UNDERWOOD



C. B. T., Des Moines, Iowa.—If, as you state, the policy offered in exchange provides for the accumulation of a legal reserve, which should equal a mathematically sufficient reserve, then the level rate of $45.23 at the stated age is reasonable. Under the conditions inevitable in assessment insurance, the longer a readjustment of rates is postponed the greater this will be. If the insured is in fair average health, money will be saved by changing now.

W. J. D., Newark, N. J.—For a comparatively new company, the condition, management and progress made by the Philadelphia Life may be regarded as fairly satisfactory. Its lapse rate is rather too high, as is also the cost of securing new business, but there is gradual improvement discernible in both features. The net cost to participating policyholders is reasonably moderate. Financially, the report shows the company to be in fine shape.

M. L., Carlisle, Pa.—Taken as a whole, you have a line of insurance that grades better than average. Aside from the fraternal certificates, which are for small amounts only, all the companies you name but one, the fourth, are excellent, and the fourth is good. You are wise in having so much on the long term endowment plans and you would have made an improvement if you had put the whole line in contracts of that character. However, avoid changing them now, and under no circumstances permit any agent to "twist" any of them. If for any reason it is desirable that the amount of your protection should be increased, supplement what you have with Term insurance, but do not abandon any portion of what you have for Term policies.

J. S., Grandview, Texas.—The Illinois Bankers Life Association issues certificates of $500 to $4,000, secured by a "guarantee fund" contributed by the members. Each member's share of this fund (I quote from an agency report on the association) "is based on age of applicant and amount of insurance, its purpose being to provide for death or total disability claims in excess of amount of money realized upon a call of 30 per cent for mortuary purposes." To me that means a make-shift substitute for a mathematically calculated full reserve. The Bankers Life of Des Moines tried a similar substitute for thirty years and finally adopted the old line plans. It means future trouble for policyholders. The North American Accident Insurance Company is worthy of your confidence.

J. C. O., Euclid, Ohio.—As I have observed many times in this department, life insurance policies are long term contracts most of which are fulfilled after the deaths of their holders. Therefore, nothing in the shape of a life insurance company can be too strong, too well planned, too well managed. There are so many stronger, better managed, longer tried companies than the one you ask about that I cannot advise you to take its policy in preference to a score that are incomparably better. This is not saying it is not at this time a good average company; but, according to my judgment the future is not as certain as I would desire that of my insurer to be. As between placing your money in a savings bank or a good life company, the latter offers tremendous advantages if you die and timely and equal service. The cost of protection considered, if you live out an average term of life.

The Market Place

WHEAT SEIZED IN CANADA

Unexpectedly, on the night of the 27th, the Canadian Government commandeered, or took possession of, all the high grade wheat stored in elevators at Ft. William, on Lake Superior, and thirteen other ports, including Halifax. The quantity thus taken was about 17,000,000 bushels, and the average current price had been a little more than $1 a bushel. The Government acted by the agency of the Grain Commission, and by authority of the special war laws. Canada has never before had so great a crop, and the Government explained that it sought to assist in the marketing of it; also that the British Government had requested Canada's Government to provide a large quantity. Seizure had been preferred because purchase in the open market would have caused prices to rise abnormally, to the profit of speculators. The London Government afterward denied, by a semi-official agency, that it had made such a request as was mentioned by the Canadian officers, but it is understood that the matter had been under consideration for some time, and that the greater part of the wheat will go to Italy. As Great Britain needs 40,000,000 bushels, additional quantities may be commandeered. This year's crop in Canada is 336,000,000 bushels, and it has been estimated that 200,000,000 can be exported. About 150,000,000 of the surplus remains in the country.

The seized wheat was owned by millers and shippers, among whom are several Americans. Some annoyance and some loss were caused by interference with contracts. The Government pays the prices which were quoted on the Winnipeg Exchange the day of the seizure, and these range from 98¾ cents to $1.04¾. There was dismay at Ft. William, where twenty-five American and thirteen Canadian ships were taking on cargoes. Loading was interrupted, but it has been resumed, the Government saying that American ships can take the wheat as a loan, to be paid by other wheat arriving hereafter. Trading in futures on the Winnipeg Exchange was discontinued for two or three days, but it has been resumed.

Immediately after the seizure, market authorities in this country were not in agreement as to the coming effect upon the price of our wheat. Those who predicted an advance, however, were right, for the price at Chi-

cago rose 8 cents a bushel in five days, with gains of 4 cents for corn and 3 for oats. Advances here may cause additional seizures in Canada, where the tendency of the markets is to sympathize with our own. Exports from our enormous crop of 1,002,029,000 bushels continue to be very large, and have averaged more than 11,000,000 bushels a week for two months. In the nine months that ended with October the exports were 161,000,000 bushels, or nearly twice the quantity shipped in the corresponding months of last year. The Allies, Russia excepted, need wheat, and Russia's surplus is locked up. The seizure in Canada has not been fully explained, but the main purpose may have been to prevent the exaction of higher prices.

EMBARGOES ON EXPORT FREIGHT

So great is the export freight congestion at Atlantic ports that several railroad companies now refuse to take freight for ocean shipment. This action was preceded by a reduction from thirty to fifteen days (to take effect January 1) of the time allowed before charges for storage are made on freight sent to the seaboard for Europe. Representatives of leading export houses at a meeting in New York have protested against this reduction. The roads proclaiming a partial or complete embargo on freight for export are the Lackawanna, Jersey Central, Pennsylvania, Baltimore & Ohio, and Reading. At a meeting attended by the presidents of the leading roads, a committee was appointed, to hold sessions every day for a consideration of the problem. A general embargo will be avoided, if possible. But while the yards at the ports are crowded, there are 50,000 loaded cars on the side tracks of lines leading to the ports. In New York even the city's recreation piers have been rented for the storage of freight. Many of the waiting cars are loaded with wheat, many with war supplies of various kinds. It is said that some manufacturers make haste to place munitions and other products on cars, because the pay is due when these have been so placed.

This unprecedented congestion is due both to a shortage of ocean carriers and to the remarkable increase of our exports. The value of last week's shipments from New York was $63,500,000, against less than $20,000,000 in the corresponding week of last year. In the nine months that ended with October our sales to the Allies rose from $550,000,000 to $1,495,000,000, and to Denmark, Sweden, the Netherlands and Norway from $108,000,000 to $214,000,000. There is a shortage of carriers because many steamships have been taken by the Allies for transport uses, many have been destroyed by the war, and many belonging to Germany or Austria are out of the market, being shut up in neutral ports. But the supply would be sufficient for normal exports.

The railroads are doing all they can. There is evidence of this in their great

volume of traffic, which gave to several of them in October, new high records for earnings, both gross and net, and has made higher prices for their shares in the stock market.

A BILLION IN LOANS

Since the beginning of the Great War we have loaned to foreign countries more than $1,000,000,000. This total includes what are called credits. The greater part of it has been expended here for war supplies of various kinds. Nearly all of the $147,000,000 borrowed by the Canadian Government, Canada's provinces and Canadian cities and of the $44,000,000 loaned to Latin America has not been used in that way, but the proceeds of the loans and credits to European nations—Switzerland's $15,000,000, Sweden's $5,000,000, Norway's $3,000,000, and Greece's $7,000,000 excepted, at least in part—have been paid out here. The European list includes, of course, the Anglo-French loan of $500,000,000; $75,000,000 in notes, bonds and credits for France; $32,000,000 for Russia; and the $10,000,000 of German treasury notes. Russia's obligations were partly in acceptances, and partly in private agreements with bankers. The 5 per cent loan to the Canadian Government was $45,000,000. Eight Canadian provinces and ten Canadian cities are represented in the remainder of $147,000,000. Argentina procured $15,000,000 on notes and $25,000,000 on treasury bonds. Canada's provinces and municipalities had been accustomed to borrow in London.

The transactions which are publicly known, if the pending proposed British credit of $50,000,000 be included, amount to almost $1,000,000,000. But there are also many credits which have been arranged privately with banking institutions for foreign merchants or firms, and individuals here have bought German and British war bonds. The total undoubtedly exceeds a billion dollars.

Russia's obligations here have amounted to a very large sum, and it is understood that she has received financial aid from Great Britain. Representatives of a group of Russian banks are now negotiating here for a credit of $60,000,000, to be secured by Russian bonds and by the guarantee of the Government. They have encountered much opposition, not only from those bankers who protest against Russia's cruel treatment of Jews, but also from others who feel that there should first be a commercial treaty defining the rights of American business enterprises and the privileges of American citizens in Russia. By some the financial risk involved is regarded as a serious obstacle. If the negotiations are successful, the interest rate will be high.

The following dividends are announced:

Liggett & Myers Tobacco Company, preferred, 1¾ per cent, payable January 1, 1916.

American Car and Foundry Company, preferred, 1¾ per cent; common, ½ per cent; both payable January 1, 1916.

FLORIDA

MIAMI
PALM BEACH
HAVANA
TAMPA
KEY WEST
SAINT PETERSBURG
JACKSONVILLE
CHARLESTON
ALL SOUTHERN RESORTS

This semi-tropical land of smiling skies and blue water is best and most comfortably reached by direct steamers from New York.

12-Day Tour $63.40

Leaving New York Saturday of any week, at 1 P.M. via Mallory Line, you have a restful and invigorating sea-voyage down the coast, passing the gem-like Florida Keys and arrive on the fourth day at Key West, the *"American Gibraltar"*—entrance to the *"American Mediterranean"* with its great Naval and Military Stations, sponge fisheries and famous cigar factories. Interesting side-trips can be made to Havana, Cuba, or, via "Over-Sea Railway," to Miami, Palm Beach, etc.

Continuing on same steamer, another day's voyage brings you to Tampa—gateway to the famous resorts of the West Coast; St. Petersburg, "The Sunshine City," Belleair, or Pass-a-Grille—noted for year 'round surf bathing, fishing, etc.

From Tampa by a short rail ride to Sanford, you then embark on that wonderful *"Daylight and Searchlight"* trip on the St. John's River—*"The American Nile"*—through a wealth of tropical scenery with glimpses of alligators, birds of beautiful plumage, and picturesque native settlements, until you reach Jacksonville—where again you can plan side-trips to gay Atlantic Beach or quaint old St. Augustine.

Returning northward from Jacksonville by Clyde Line steamer, a call at Charleston reveals much of interest, with forts Moultrie and Sumter of Civil War fame, the Charleston Navy Yard, old Cathedrals, and the Battery Esplanade with its homes of old southern aristocracy.

Another two days of complete relaxation aboard ship from Charleston, brings you to New York and ends a most interesting and altogether satisfying tour.

The Independent as a Weekly Periodical Acceptable to Students

Many teachers testify that The Independent is a paper of this high type. That it meets with the approval of students is shown by its wide circulation in schools and colleges thruout the country. In the Stuyvesant High School, where the purchase of any periodical is purely optional on the part of every student, The Independent is bought weekly by nearly one thousand of the students, who say that they prefer it to other publications of somewhat similar character. A class section of the senior class, on being asked recently if it wished to change from The Independent to another periodical, stated emphatically that it preferred to continue the use of The Independent.

FREDERICK HOUK LAW, A.M., PH.D.,
Head of the English Department, Stuyvesant High School, New York.

BOTH SIDES A DEBATE

THE GARY SCHOOL PLAN

RESOLVED: That the Gary school plan should be adopted in our city school systems.

The school system of Gary, Indiana, is attracting considerable attention from educators as a solution of the educational problems in large cities. The last issue of The Independent explains its use in the City of New York, where its founder and superintendent, Dr. William A. Wirt, has been engaged to try out his plan. The essential features of the Gary plan are: 1. School buildings equipped to meet all the needs of the pupils for study, work and play. 2. Alternation of classes between the classrooms and the other school facilities to accommodate two complete schools in the building at one time. 3. A longer school day with departmental instruction. This outline was prepared by Edith M. Phelps.

ARGUMENT FOR THE AFFIRMATIVE

A. There is need for improvement in our present city school systems.

1. The large amounts now spent for schools demand a more efficient utilization of funds.

2. The failure of the existing systems to provide a remedy for the part-time evil makes some other plan necessary.

3. The present system has failed to equip children with the knowledge necessary to a successful life.

B. The Gary school plan would do much to relieve these conditions.

1. The cost of remodeling the present school buildings on the Gary plan is small compared with the amounts needed for new buildings under the present system. The money saved on buildings could be expended for teachers' salaries and other needed improvements.

2. The part-time evil should be abolished.

3. That it would reduce the burden on taxpayers is shown by the comparison of figures for Gary and New York City. The cost of the schools in Gary per pupil for twelve years is $394.20 as against $748.88 in New York, and the Gary pupil has more vocational work.

4. The Gary system not only makes a wider provision for training in science and the industries, but relates the vocational work of the school to actual life. It makes no separation of the manual work from the intellectual and so avoids that feeling of caste sometimes found.

C. There are many other advantages in the Gary school system.

1. By providing all the facilities for study, work and play, the city child is kept off the streets and a larger proportion of his activities are under the control of the school.

2. It provides for a larger measure of individual instruction. The flexibility of schedules enables each child to progress as rapidly as he is able in each line of study and to develop along the lines of his special capabilities.

3. It solves many of the problems of discipline. The easy democratic and yet respectful spirit at Gary and the intensity of application make the formal discipline of the present school system unnecessary. Truancy is unknown.

4. The system of departmental teaching with specially trained teachers for every department lessens the need for special supervision and it enables the individual teacher to reach a maximum efficiency with a minimum of effort. Lengthening the school day does not necessarily lengthen the amount of teaching for each individual teacher.

5. Evenings and Saturdays, instruction is provided for the parents and others of the community who are employed during the day and the value of the school plant is increased.

6. The coöperation of the school with the libraries, churches, playgrounds, etc., increases the value of all these forces. No child is forced to receive religious instruction except under the supervision of his own church authorities and with the full consent of his parents.

D. Where the plan has been tried it has proved successful.

1. The success of the plan in Gary has induced many schools to try it.

2. It has been in operation three years at Sewickley, Pa. The results have been 1. A reduction in the teaching force. 2. Full-time accommodations for a larger number of pupils at a very small increase in cost of administration. 3. A broadening of the child's experience. 4. A happier and freer school life.

3. In New York City, where it has been tried, the principal of School 89 says: "Mr. Wirt's double session program has solved our overcrowding problem and is giving the children a much better curriculum than the five-hour single session."

4. The plan has just been extended to two schools in Newark, N. J.

ARGUMENT FOR THE NEGATIVE

A. That the Gary school plan would remedy the evils in our city school systems to the extent that its adherents claim is to be questioned.

1. The savings in the cost of buildings and equipment may be at the expense of efficiency and the pupil's well-being.

2. That the Gary plan in our large city school systems would relieve the part-time evil and reduce the teaching force has not been proved by experience.

3. There is serious doubt as to the value of the vocational training offered by setting younger children to learn from watching the older ones and intrusting the instruction in the trades to workmen hired primarily to keep the buildings in repair.

B. There are serious disadvantages in the plan.

1. By being allowed to develop along the lines easiest and most pleasant, pupils fail to acquire the power of concentration and application.

2. The tendency is to put the utilitarian ideal ahead of real scholarship.

3. The system of double schools would bring many of the serious studies in the afternoon when the line of fatigue is the strongest, and the lengthening of the school day increases the strain on the teacher.

4. The system of departmental teaching with the lack of special supervision would necessitate a well-balanced force of specially trained teachers which it would be difficult for the average city school to secure. The results at Gary show unevenness in the teaching force.

C. Many other objections have been urged against the plan.

1. It is affirmed that the feature of religious instruction would tend to introduce sectarianism into the schools, to divide the children according to their religious affiliations and might be utilized for the purposes of proselytism.

2. Fault is found with the practise of associating the children of several grades together in the auditorium exercizes because of the difference in the ages of the children.

3. The scheme of having the school coöperate with the other welfare agencies of the community is not always practicable. Many of these agencies cannot coöperate for lack of funds.

D. The results of the plan in the Gary schools have not convinced many educators that it would succeed in other cities.

1. Conditions in Gary are so different from those in most cities. No old buildings or special school traditions existed to hamper the success of the plan.

2. Many educators and school experts who have visited the system have not been wholly favorably imprest by it, and few other cities have adopted it. The general opinion is that the plan is still in the experimental stage.

3. The plan has not been tried in any other city a sufficiently long time to test its value.

JUST A WORD

Mr. Walter Launt Palmer, whose painting "Winter Morning" is reproduced on the cover of The Independent for this issue, is an American artist of prominence, whose fame is due chiefly to his portrayal of nature out of doors.

"Winter Morning"—one of his latest paintings—is perhaps one of the most characteristic—since it is in his interpretation of snow scenes that Mr. Palmer has done some of his best work.

"He has caught the subtle relations of sunshine or shadow on the white surfaces with rare dexterity, and obtained satisfactory conclusions; he has drawn, too, the tree form with fidelity, with much understanding of the anatomy, and with grace of line and form."

The Independent publishes this reproduction of "Winter Morning" thru the courtesy of Mr. Palmer and of M. Knoedler and Company, at whose galleries in New York City the painting is now on exhibition.

In spite of the economic depression caused by the war the Canadian Northern Railway, the newest transcontinental highway, has been able to push its steel thru to the coast and has recently begun service between Toronto and Vancouver. Geddes Smith, of The Independent's editorial staff, was the first passenger to make the thru trip on a regular train. He has written for early publication an account of the new line and its importance to Canada.

THE PRESIDENT'S PROGRAM OF PREPAREDNESS

THE President's message delivered at the opening of Congress last week puts the question of military preparedness fairly and squarely before the country. Shall his program be adopted or rejected? The American people have seldom been called upon to take action upon a more momentous issue.

There are two main aspects of the question. One is military. The other is financial. The first has to do with the end desired. The second with the means to attain the end. The textbooks on philosophy that we studied at college used to tell us that the end *must* be good and the means *should* be good, if the resultant course of action is to be justified. If this be accepted as a rule of statesmanship, then the question before the American people is this: Does the safety of the United States demand the increase of the army and navy as suggested by the President, and, if so, is the financial plan proposed by him the way to carry it out?

First, the military plan. Mr. Wilson proposes to increase the regular army from 102,985 to 141,843. This seems not only unobjectionable, but entirely reasonable. Our outlying possessions and our responsibilities under the Monroe Doctrine would make some such increase as this in any case inevitable. The President's proposal is moderate and based on the sound principle as stated by him, that our military peace establishment should be "no larger than is actually and continuously needed for the uses of days in which no enemies move against us."

Mr. Wilson also proposes a "continental army" of 400,000, which shall enlist for a period of six years, but which shall only serve with the colors two months each year for the first three years. This is a novel suggestion. There are possible objections to it. It may, for instance, conflict with the state militia. It also asks a good deal in the way of personal sacrifice from the young men who enlist as well as from their employers. It seems like putting all the load on the willing horse. Nevertheless, our young men no longer grow up familiar with firearms. The old days when partridges, foxes and deer were at everybody's back door have forever fled. Perhaps the "continental army" is the best plan that can be devised for the military training of our youth without resorting to such undemocratic and dangerous expedients as conscription and that ever present foe to liberty, a large standing army.

The President's program for the navy is ambitious. It will require five years to carry it out. He proposes a large increase all along the line, as can readily be seen from the following table, in which only the principal types of ships are listed.

Ships Built or Building	[illegible]	[illegible]	[illegible]
Battleships, first line	17	27	10
Battle cruisers	[illegible]	6	[illegible]
Battleships, second line	23	25	2
Scouts	[illegible]	13	[illegible]
Destroyers	68	108	40
Fleet submarines	..	18	18
Coast submarines	58	157	99

From the naval standpoint we are not prepared to say whether this increase is necessary or not. The experts differ. At present our navy ranks third in size—a trifle behind Germany and a little ahead of France. We shall rank fourth, however, when the vessels now building are completed, unless in the meantime we authorize a considerable increase.

But tho we rank third, or even fourth on paper, our navy is probably unsurpassed in the world ship for ship and man for man. There is much evidence on this score, the armament leagues to the contrary notwithstanding. According to their testimony last week before the Naval Committee of the House, Admiral Badger, late commander of the Atlantic fleet; Admiral Fletcher, now in command of the Atlantic fleet; Admiral Fisk, of the General Board, and others would have us assured that the navy's efficiency and morale is unexcelled. "I do not know," said Admiral Fletcher, "that the efficiency and personnel have ever been higher than they are today."

As to the fleet's ability to render an account of itself against all comers, we quote some striking passages from the minutes of the House committee:

Mr. Trebble—Are we not now in a better position to control the sea than we have ever been?
Admiral Fiske—I should say yes.

. . . . . .

Mr. Witherspoon—Do you want us to understand that England is the only nation on earth that has a navy that we could not successfully resist?
Admiral Fletcher—I think that is a fair conclusion; yes, sir, at the present time.

. . . . . .

Mr. Stephens—How large a fleet would it have to be [to protect the U. S.]?
Commander Stirling—If the enemy should seek us out near our base an equal fleet.

. . . . . .

Secretary Daniels—Yes, we have a fleet sufficient to defend either coast.

. . . . . .

Thus our highest expert naval opinion holds that our navy could prevent any invasion of the United States, because our ships and men are as good as those of any other nation on earth and because no nation could operate its full strength 3000 miles from its base, and that would make our fleet in our own waters superior to all other navies but England, and it might make us even equal to hers.

Now, of course, if the American people want a navy

with which to acquire "a place in the sun" or to "lick all creation," our present navy is too small. Certainly Mr. Wilson's increase would be utterly inadequate. But there is no one in the United States who is willing publicly to aver that offense is what we want a navy for. The American people require a navy only for defense, and the sole question is whether Mr. Wilson's program is a luxury or necessity for this purpose.

While the President does not present any evidence that the administration's program is a necessity, yet it must be admitted that he has not gone beyond the best military advice at his elbow. His proposal only hastens somewhat the plans laid down for the last few years by the General Board for the further increase of the navy. We are willing to support Mr. Wilson, therefore, provided his program does not require too great sacrifices on the part of the American people. And this brings us to the second aspect of the case. Assuming that the President's program is desirable, or at least unobjectionable, are the means he proposes for bringing it about justifiable?

Secretary McAdoo claims we shall have a deficit of $252,701,000 "if legislation is not past to change conditions." President Wilson says by continuing the present taxes, especially the duties on sugar, this deficit could be reduced to $112,000,000, which is not much more than the proposed military increase. In other words, we shall come out nearly even at our present rate of expenditure if we do not go in for this extra preparedness.

Mr. Wilson most wisely does not propose a bond issue in order to raise the money. To tax future generations to pay the current expenses of this one would be a political blunder that ought to sound the death knell of any administration that fathered it. Nor does he hint at revising the tariff upward. That would Republicanize the Democratic party and be party suicide. The President proposes that the exemptions under the income tax be reduced, that the surtax on incomes be increased, that gasoline, automobiles, stationary engines, pig iron, fabricated iron and steel and bank checks be taxed. This will, of course, raise a howl. But it is the only thing to do. Put your tax as far as possible where it cannot be evaded, and in that way you will make the people realize what they are doing.

But are these revolutionary tax increases necessary? The sum derived from them added to our present military expenditures will total a sum greater than has ever been spent in time of peace by any nation on earth. As Representative Kitchin said in a recent interview:

> When you consider that the President's preparedness program demands at one bound, at one time, we shall increase our already immense naval expenditure by more than our total increase during the last fourteen years, and by more than the total naval increase of Germany during the five years preceding the European war, and by more than the combined naval increase of all the nations of the world in any one year of their history—is it any wonder that I feel that if this program goes thru it will be no longer a question whether we *may* become a nation given over to navalism and militarism, but that we *shall* have become one.

It might not be so bad to spend millions for defense if we were sure of getting a dollar's worth for every dollar spent. But it looks as tho much of our money is wasted. It costs, for instance, in this country over $1200 a year to support a soldier. In Europe it can be done for a third or even a quarter of that amount. The high cost of living in this country, and the fact that we pay our soldiers good wages while European nations pay theirs practically nothing, do not explain all the difference. In a striking leading article in the November issue of *Everybody's Magazine* the reason why our military expenses are so much greater than those of other nations is very searchingly discussed. We would not be understood as vouching for the facts there published. But the writer declares, and the presumption is with him, that of the $250,000,000 we have been spending a year for national defense, about $80,000,000 is wasted.

A few of the items that make up the total we epitomize as follows:

> The army is now divided among forty-nine army posts—most of them due to the greed of politicians. If these were reduced to eight, as recommended by the War College, $5,500,000 a year could be saved.
>
> To protect us against the Indians (!) we have spent $20,000,000 on Forts Apache, Clare, Huachuca, MacKenzie, Meade, Missoula, Robinson, Sill, Russell, Douglas, Leavenworth, Riley and Snelling.
>
> In the last fourteen years we have spent $14,000,000 without reference to military expediency on eight posts in Indiana, Georgia, Iowa, California, Oklahoma and Alaska.
>
> Nine navy yards on the Atlantic are unsuited to present and future needs of the navy. They have cost, including harbor dredging, $320,000,000.
>
> In fifteen years the United States has spent $1,656,000,000 on the navy. In the same period Germany has spent $1,137,000,000, tho our navy is rated behind Germany.
>
> Charleston Navy Yard is too shallow (cost $5,000,000), Port Royal had to be abandoned (cost $3,000,000). Naval training station on the Great Lakes accommodates 4000 men but has never had more than 600 (cost $3,500,000). Portsmouth somewhat unsuitable for purposes for which it was made (cost $20,000,000). Philadelphia shallow and inaccessible to part of navy (cost $13,000,000). Mare Island cannot berth largest ships (cost $20,000,000). Naval experts consider Norfolk best place for dry dock, but Pennsylvania Congressmen stopped it, and because it could not be put at Philadelphia whole thing has been abandoned, etc., etc.

The President has totally ignored in his message the questions raised by the above citations. The American people should inquire into them. Let the useless army posts and navy yards be forthwith abandoned. Let efficiency experts be employed thruout the army and navy, and when all the red tape has been snipped and the needful economies introduced, then the President's invitation to the American people to tax themselves severely for preparedness will come with a better grace.

We have, then, no objection to the President's program, as a military program, tho we wish he had thought it worth while to try to convince the country of its necessity. But we do strenuously object to having the country heavily taxed to carry it out, unless an attempt is made at the same time to abolish the pork barrel and put the army and navy on an efficient business basis.

PASSIONATE SYMPATHY

WE have elsewhere discussed at some length the President's message, which is devoted mainly to "preparedness." Our readers will properly hold different views as to the necessity of a considerable increase of the army and navy, and of the necessity of the expenditure in the next five years of some hundreds of millions in defense. We would here comment on a paragraph of the message which has to do with a great principle, but which is likely to pass comparatively unnoticed.

The President had spoken very strongly and properly of those citizens of foreign birth who have been guilty

of disturbing the peace and good order of the country by interfering with our manufactures and our commerce, led thereto by zeal for the country they had left, which overpowered their loyalty to the country they had adopted. He then turned to speak of certain native-born citizens who deserved, he said, yet severer condemnation:

> I wish that it could be said that only a few men, misled by mistaken sentiments of allegiance to the Governments under which they were born, had been guilty of disturbing the self-possession and misrepresenting the temper and principles of the country during these days of terrible war, when it would seem that every man who was truly an American would instinctively make it his duty and his pride to keep the scales of judgment even and prove himself a partizan of no nation but his own. But it cannot. There are some men among us, and many resident abroad who, tho born and bred in the United States and calling themselves Americans, have so forgotten themselves and their honor as citizens as to put their passionate sympathy with one or the other side in the great European conflict above their regard for the peace and dignity of the United States. They also preach and practise disloyalty. No laws, I suppose, can reach corruptions of the mind, and heart; but I should not speak of others without also speaking of these and expressing the even deeper humiliation and scorn which every self-possest and thoughtfully patriotic American must feel when he thinks of them and of the discredit they are daily bringing upon us.

What the President here condemns is "passionate sympathy" with one or another of the nations at war, and this he characterizes as "disloyalty." What such sympathy, even tho passionate, has to do with loyalty we fail to see. One can approve warmly or disapprove strongly the position and doings of the Teutons or the Allies, and then express himself as vigorously as he please, without in the least affecting his absolute loyalty to his own country.

There is a principle here involved, the principle of free speech. Neither the President nor any one else has the right to challenge the liberty of an American citizen to speak his mind freely, so long as he abstains from violence. Further, it is only by free utterance, and even with indignation, which is passion, that public sentiment can be brought to bear on nations at war. If they are guilty of injustice or cruelty, they ought to be told what neutral nations think of them.

Here is a citizen, American-born, who, perhaps with certain prepossessions, is convinced that Great Britain has been guilty of shutting out Germany from the freedom of the seas and her legitimate "place in the sun," and has been long intriguing to force her into a defensive war. If Great Britain has done this it is very proper that one who believes it should express himself very strongly and should do his best to convince others that he is right. If another citizen, American-born, believes that Germany unprovoked brought on a needless war and was guilty of an international crime in invading and crushing Belgium, then he has a right to feel strongly and to tell as strongly what he feels. His loyalty to his own country may be as passionate as his indignation at one of the countries at war. One of those countries is Turkey, and we can have no respect for the man who would keep silent about the Turkish atrocities, out of any concern for the peace of neutrals.

But the President speaks also specifically of those Americans living abroad who give expression to their "passionate sympathy." We had not heard very much of that. Those Americans who are in the service of the Red Cross, or in the hospital service, or are missionaries in Turkey, whatever their feelings may be, have been prudently careful not to give offense. We hardly know to whom the President can refer, unless it be those Americans long living abroad whose feelings have been so wrought up that they have themselves enlisted in the war. They have thereby forfeited their rights to protection as American citizens, and they might properly have resigned their citizenship. It would be illegal and unjustifiable if here in America citizens should do any act in the nature of war against either belligerent, but it is not quite the same with American citizens abroad. It is what Byron did in Greece, and nobody blames him. And Dr. Samuel G. Howe was his companion in the same war.

Our contention is for freedom of speech, to express freedom of feeling. It is for freedom to utter the public opinion of the world. It is not for rabidness, or craziness, but for the liberty of intense passion. We would not have feeling silenced. The free expression of indignation if Great Britain seizes neutral ships on the open sea, or Germany blows them up with torpedoes, in no way weakens the spirit of loyalty toward our own country, and may well be to the credit of the man who speaks.

A SHARP WORD TO AUSTRIA

THE note to Austria-Hungary on the "Ancona" case is sharp and to the point. It does not argue the case, for it needs no argument. It demands what the United States has every warrant in international law and morals for demanding and what Austria has no right to refuse.

Vienna would do well to follow the example of Berlin and promise not to do it again.

We are determined to uphold the freedom of the seas, which to us means the right of noncombatants and especially of neutrals to traverse the high seas in safety so long as they offend against none of the laws of nations. We shall spare no pains and avoid no effort necessary to this righteous end.

THE BETRAYAL OF THE REPUBLIC

NEVER before in the history of the world has it been possible for a man to commit so gigantic a crime as Yuan Shih-kai has committed in signing away the liberties of four hundred million of people. It is the crowning act of his long career of intrigue and treachery. He has in turn betrayed all parties which have trusted him. He betrayed the Emperor and betrayed the Empress Dowager. He betrayed the Boxers and betrayed their opponents. He has betrayed the Manchus and betrayed the Chinese. He has betrayed the monarchy and betrayed the republic. Made President thru the self-abnegation of Dr. Sun Yat-sen, who accomplished the revolution, he used his office to make a god of Confucius and a monarch of himself. He is condemned out of his own mouth, for in 1912 he said:

> On the day on which the Republic was proclaimed I announced to the whole nation that never again shall a monarchy be proclaimed in China. At my inauguration I again took this solemn oath in the sight of heaven and earth.

From the rumors of risings in the north and south it appears that the Chinese people will not tamely submit to his usurpation of power. We hope they will not. The young Chinese who have been educated in republican America will, some of them at least, remain true

to the lessons they have learned here, even tho it may cost them their lives. Would that some of our young men might be inspired to join with them in their struggle for liberty, as the French came to our aid when we overthrew our king. Monuments would be erected in China to such volunteers of freedom as we erect monuments to Lafayette, and some day the United States would benefit by the gratitude of China as France is now benefiting by the gratitude of the United States.

The influence of the United States has twice saved Mexico from tyranny. But Yuan Shih-kai, like Maximilian, has made himself emperor, and like Huerta has abolished parliament and constitutional government. We are glad to see that Japan is doing what it can to prevent the usurpation of the throne, and the United States might well share the duty and high privilege of thus coming to the rescue of the Chinese people in the hour of their distress. At least we hope that our Government will be as slow in recognizing the empire as it was in recognizing the republic.

TWO FINE OPPORTUNITIES

THERE may conceivably be some political motive back of the appointment by Governor Whitman of Oscar Straus as chairman of the New York City Public Service Commission. But we do not care greatly whether there is or not. Of two things we are perfectly sure. Mr. Straus will not lend himself as a public officer to any political machinations. He is not that kind of man. Nor will he fail to keep the administration of his great office on the highest plane of integrity and public service. He is precisely that kind of man.

Mr. Whitman has done well in this selection. May he do as well when the next vacancy occurs in the near future.

Every Governor since Governor Hughes, even including on a previous occasion Mr. Whitman himself, has used the power of appointment to this commission for political advantage. Not only have the people of the city suffered from this misuse of a body of high importance to their comfort and welfare, but the whole movement for the administrative regulation of public utilities has been affected by it for ill.

Mr. Whitman has here a great opportunity to restore the former high character of the New York Public Service Commission, and to perform a notable service in the cause of efficient government versus political partizanship.

A similar opportunity confronts President Wilson. The postmaster of New York is close to the end of the term for which he was appointed. He ought to be reappointed. Mr. Morgan began his post office work at the bottom and worked up from the ranks to his present high position. He is a trained postal administrator, with a fine record for efficiency. His retention in office would not only be the best thing for the continued effectiveness of the New York post office; it would afford a splendid object lesson of the way in which a great business department of the government should be administered.

But will he be reappointed? We regret to say that it seems doubtful. For Mr. Morgan is a Republican. Already several candidates have sprung up with strong Democratic backing. There is no evidence that any one of them knows anything about what Congressman "Billy" Kent used to call "postmasting." If there is any one thing that Mr. Morgan does know, it is the Alpha and Omega of that highly specialized business.

Here is a fine chance to throw overboard political partizanship in the public interest. Will not the President seize it? We wish he might.

UNIVERSAL SERVICE FOR WOMEN

THE feminist movement in Germany has received a new impulse and direction from the war. The drafting of men to the front has opened to the women many fields of occupation hitherto barred to them and at the same time the success of the women's clubs in nursing the wounded and sick and in caring for the destitute mothers and children has shown that they possess a power of organization and efficiency of which their sex was formerly thought incapable. Besides this the women are becoming influenced by the spirit of patriotism and self-sacrifice for the fatherland as now manifested by the men, and they are beginning to inquire if they, too, do not owe some service to the state.

From this has grown a demand on the part of the women for something corresponding to the period of military service required of every young man. A flood of pamphlets has come out on the question and the *Bund für Frauendienstpflicht*, the Society for the Duty of Woman Service, has local branches in all parts of the country. Its aims are, like all incipient movements, vague and various. But the idea is to give every young woman a year's training in those forms of activity by which women thru nature or custom are best adapted to contribute to the welfare of the state. They will be instructed in such subjects as hygiene, eugenics, the care and training of children, household economics, the science of nutrition, and the art of cooking. The necessary practise in these studies will be afforded by service in hospitals, schools, asylums and other public institutions.

By such a drill it is hoped to accomplish three objects. The first is to secure a sufficient number of trained helpers to take care of the cripples and orphans the war has produced. The second is to repair as rapidly as possible the injury done to the nation by raising the standard of household efficiency and health and by providing that the new generation shall be sound in body and mind. The third object is less concrete and comprehensible, but in the opinion of the advocates of the movement not less important. It is "the socialization of the feminine mind." The aim is to teach the women that they have duties to the state as well as to their families, that "good deeds" does not mean almsgiving, but sharing of another's burdens, and that the future of the race depends upon them as much as upon the men.

WHY HOLD IT ANYWHERE?

THE Democratic National Convention is to be held at St. Louis. There is probably no better place for it—unless it were in the Elysian Fields or on the banks of a canal in Mars.

The nominating convention is an outworn institution. But the politicians of the country do not know it yet.

The people who can elect a President without intermediaries could nominate a candidate for the Presidency with equal directness. The convention will vanish some day. The presidential primary will take its place.

THE STORY OF THE WEEK

THE GREAT WAR

December 6—British on Tigris retire to Kut el Amara, 105 miles from Bagdad. United States sends "Ancona" note to Austria.

December 7—Germans gain trench in Champagne. German Field Marshal von der Goltz in command of Turks in Mesopotamia.

December 8—Active Turkish bombardment in Gallipoli. Conquest of northern Serbia complete.

December 9—New Spanish Ministry under Count Romanones replaces Dato Ministry. Italians continue bombardment of Gorz.

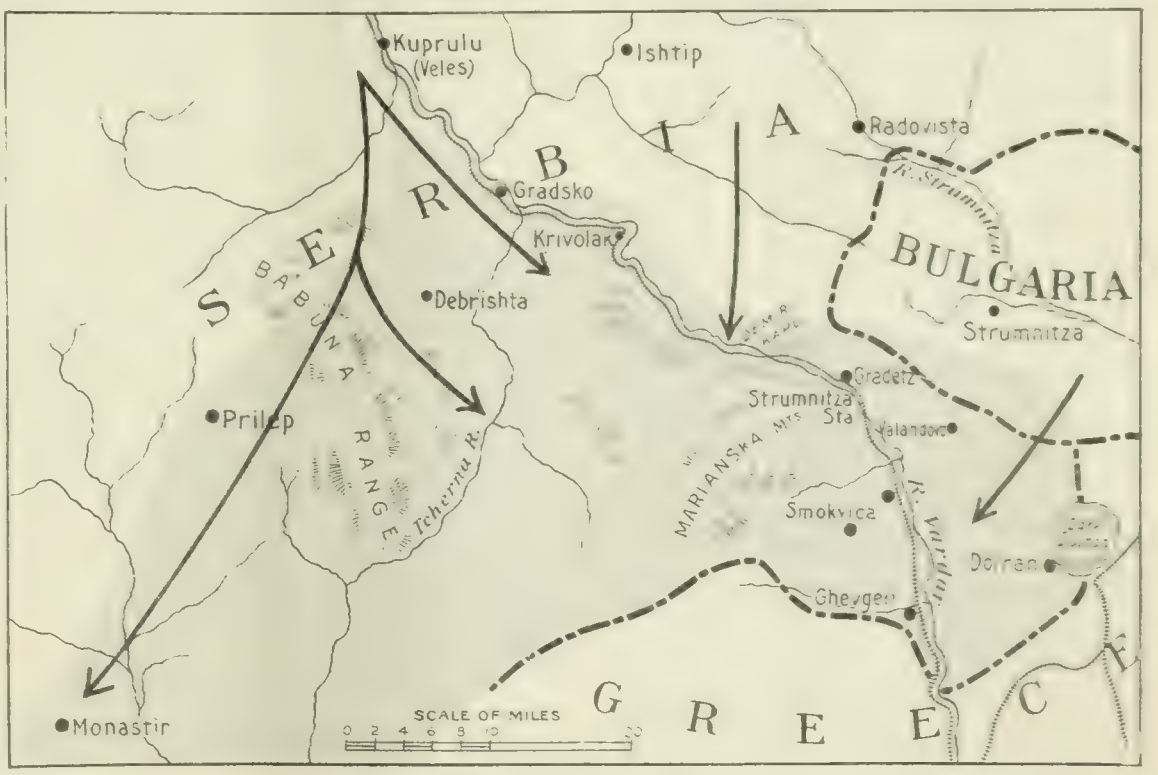
December 10—British and French withdraw from Serbia. French cruiser takes Germans from American steamer "San Juan."

December 11—President Yuan accepts throne of China. Lord Derby's plan of recruiting brings British volunteers up to four million.

December 12—Greece yields to ultimatum of Allies. Italians gain ground west of Riva.

Allies Driven from Serbia

It was the hope of the Allies that the French and British troops sent to Salonica might at least hold the triangle of Serbian territory between the Vardar and the Tcherna Rivers which could be used as a base for an advance into Serbia in the spring. The mountains here form a natural barrier thru which the railroad and the river run by deep defiles. But the collapse of the Serbian defense released the German and Austro-Hungarian troops in the north and some of them were sent to reinforce the Bulgars in the south. These combined forces attacked the French and British from three sides and in a series of bloody conflicts forced them to evacuate the Vardar valley and retreat into Greece. The French, who at one time had got almost as far as Veles and held both banks of the Tcherna, tried to make a stand at Krivolak, but this proving untenable retired to the pass of Demir Kapu. The Bulgars, however, ousted them by an attack on the right flank directed at Strumnitza Station, which is in Serbia. At the same time the British, who had advanced into Bulgaria almost to Strumnitza, were expelled by the Bulgars from their entrenchments between Lake Doiran and the Vardar. So both armies withdrew down the railroad toward Salonica and it is said that even Gheygeli, the last Serbian town on the line, has been abandoned.



The question now arises whether the Bulgar and Teuton armies will pursue their foes into Greek territory and fight them there. They would have a legal right to do this, since the Greek neutrality has already been violated by the French and British, and they might be able to capture the Allied army or drive them from Salonica, since the French and British are outnumbered more than two to one. But the Greeks hate the Bulgars and they object anyway to having their country made a battleground, so there would be danger that the Greek army might fight on the side of the Allies.

The Greek port of Salonica is about thirty-five miles south of the Greek frontier and it seems likely that the French and British forces will make their winter quarters in and about the city. The Allies are reported to have sent an ultimatum to the Greek Government demanding that the Greek troops in the Salonica district be demobilized and that the French and British troops be allowed to establish themselves here as a military base. This ultimatum was accompanied by a threat to blockade all the Greek ports unless the demands of the Allies were promptly conceded. It is understood that the Greek Government has agreed to comply and will demobilize the Greek forces in Macedonia. The campaign for the election of a new Parliament is now on in Greece, the chief issue being between the policy of ex-Premier Venizelos, who favors entering the war on the side of the Allies, and that of King Constantine, who wishes to maintain neutrality.

Peace Talk in the Reichstag

On the assembling of the Reichstag, the Socialist leader, Dr. Philip Scheidemann, asked the question: "Is the Imperial Chancellor ready to give information as to the conditions under which he is willing to enter into peace negotiations?" Dr. Scheidemann recalled the words of the Emperor William that this was for Germany no war of conquest and he argued that since Germany had demonstrated her strength by her success in the field, she could now speak of peace without risk of being considered disheartened. The war was bringing all Europe to the verge of ruin, and if it continued much longer the United States would be the only victor. He protested against the idea of annexation of territory by Germany and equally against the idea held by the Allies that Germany should be crushed and should cede Alsace-Lorraine to France.

In his reply Chancellor von Bethmann-Hollweg stated that "Whenever our enemies make peace proposals compatible with Germany's dignity and safety, we shall always be ready to discuss them." He reviewed the work of reconstruction in the territory occupied. In Belgium the economical situation is almost normal except for the export trade which England prohibits. In Poland, Lithuania and Courland the terrible destruction caused by the Russians is being repaired. "Never in history when so many millions are fighting in a life and death struggle has so much peaceful work been accomplished behind the front." The construction of a bridge thru the Balkans, by the aid of King Ferdinand, has brought supplies from Turkey. "After the conclusion of peace this bridge will not resound with the tread of marching battalions, but will serve for works of peace and Kultur. The district reach-

THE EVACUATION OF SERBIA

The French and British troops have now withdrawn from the Serbian territory which they had occupied. They arrived at Salonica too late to be of any assistance, for before they could advance into Serbia the Bulgars had cut the railroad at Veles and the Allied troops could only halt and hold the triangle between the Vardar and the Tcherna rivers. A brave band of Serbs tried to defend the pass leading thru the Babuna Mountains to Prilep and Monastir, but the Bulgars broke thru and took these towns. This enabled the Bulgars to attack the French on the Tcherna side, while another Bulgarian force attacked the British between Lake Doiran and the Vardar River. The Allied army was threatened with being cut off and captured and so was forced to retire into Greece. The shaded area shows the territory controlled by the Allies about a month ago, but now relinquished

THE AMERICAN NOTE TO AUSTRIA

RELIABLE information obtained from American and other survivors who were passengers on the steamship "Ancona" shows that on November 7 a submarine flying the Austro-Hungarian flag fired a solid shot toward the steamship, that thereupon the "Ancona" attempted to escape, but, being overhauled by the submarine, she stopped, that after a brief period and before the crew and passengers were all able to take to the boats the submarine fired a number of shells at the vessel and finally torpedoed and sank her while there were yet many persons on board, and that by gunfire and foundering of the vessel a large number of persons lost their lives or were seriously injured, among whom were citizens of the United States.

The public statement of the Austro-Hungarian Admiralty has been brought to the attention of the Government of the United States and received careful consideration. This statement substantially confirms the principal declaration of the survivors, as it admits that the "Ancona," after being shelled, was torpedoed and sunk while persons were still on board.

The Austro-Hungarian Government has been advised, thru the correspondence which has passed between the United States and Germany, of the attitude of the Government of the United States as to the use of submarines in attacking vessels of commerce, and the acquiescence of Germany in that attitude, yet with full knowledge on the part of the Austro-Hungarian Government of the views of the Government of the United States as exprest in no uncertain terms to the ally of Austria-Hungary, the commander of the submarine which attacked the "Ancona" failed to put in a place of safety the crew and passengers of the vessel which they purposed to destroy because, it is presumed, of the impossibility of taking it into port as a prize of war.

The Government of the United States considers that the commander violated the principles of international law and of humanity by shelling and torpedoing the "Ancona" before the persons on board had been put in a place of safety or even given sufficient time to leave the vessel. The conduct of the commander can only be characterized as wanton slaughter of defenseless noncombatants, since at the time when the vessel was shelled and torpedoed she was not, it appears, resisting or attempting to escape, and no other reason is sufficient to excuse such an attack, not even the possibility of rescue.

The Government of the United States is forced, therefore, to conclude either that the commander of the submarine acted in violation of his instructions or that the Imperial and Royal Government failed to issue instructions to the commanders of its submarines in accordance with the law of nations and the principles of humanity. The Government of the United States is unwilling to believe the latter alternative and to credit the Austro-Hungarian Government with an intention to permit its submarines to destroy the lives of helpless men, women and children. It prefers to believe that the commander of the submarine committed this outrage without authority and contrary to the general or special instructions which he had received.

As the good relations of the two countries rest upon a common regard for law and humanity, the Government of the United States cannot be expected to do otherwise than to demand that the Imperial and Royal Government denounce the sinking of the "Ancona" as an illegal and indefensible act; that the officer who perpetrated the deed be punished, and that reparation by the payment of an indemnity be made for the citizens of the United States who were killed or injured by the attack on the vessel.

The Government of the United States expects that the Austro-Hungarian Government, appreciating the gravity of the case, will accede to its demand promptly, and it rests this expectation on the belief that the Austro-Hungarian Government will not sanction or defend an act which is condemned by the world as inhumane and barbarous, which is abhorrent to all civilized nations, and which has caused the death of innocent American citizens. LANSING

ing from Arras to Mesopotamia cannot be crushed economically."

The Chancellor devoted part of his speech to the denunciation of British "atrocities"; the oppression of Greece, the murdering of the helpless sailors of a German submarine by the crew of a British warship sailing under the American flag; the joking way in which the London papers portray the slaughter of German soldiers as a sport. "To no German soldier is the killing of an enemy a joke or a sport."

The most definite statement made by the Chancellor as to the terms on which Germany would make peace is the following:

> In full consciousness of the successes in arms which we have attained, we disclaim responsibility for the continuance of the misery which is filling Europe and the world. No one may say that we wish to prolong the war unnecessarily to conquer this or that country as a guarantee.
>
> In previous speeches I sketched the general aim of the war. I cannot be more definite today, or say what guarantees the Imperial Government demands, for example, in the Belgian question, or what combination of powers seems necessary as a foundation for these guarantees.
>
> Our foes must tell themselves one thing —the longer and bitterer they wage this war against us, the greater will be the necessary guarantees.
>
> If our enemies wish to erect a barrier for all time between us and the rest of the world, I should not be surprized if we arranged our future accordingly that neither in the east nor the west might our foes control the entrance gates thru which they might attack or threaten us anew.
>
> As I said on August 19, we are not the ones who are threatening the small nations. We are battling in this struggle, forced upon us, not to subjugate foreign nations, but to protect our life and freedom. This war remains for the German Government what it was in the beginning and what has been maintained in every pronunciamento —a defensive war of the German nation for its future. This war can only be ended in a peace which, so far as human foresight reaches, will give us security against a recurrence. We are all united in this aim. That is our strength and shall remain so to the end.

American Ships Boarded and Seized

American shipping continues to suffer from the depredations of both parties in spite of vigorous protests. The French cruiser "Descartes" is stopping and searching the vessels of the New York and Porto Rico Steamship Company for Germans. The cruiser fired four blank shots and two solid shots at the "Coamo" in the night about twenty miles from Porto Rico and took off four German firemen. The "Carolina" was held up and the chief steward taken off. The "San Juan" was likewise overhauled and two German passengers arrested. The French lieutenant who boarded the "Coamo" said that orders had been issued to take off all subjects of Germany or her allies whether crew or passengers. Since these vessels all carry the American flag and are engaged in coastwise trade between two American ports the act of the French cruiser involves a serious breach of international law. During the Civil War the British Government, under threat of war, compelled the United States to release Mason and Slidell, Confederate commissioners who had been seized on a British ship.

Three American steamships, the "Hocking," the "Genesee" and the "Kankakee," which have been seized by British cruisers, are still held awaiting the decision of the London prize court. These vessels as well as seven others yet uncaptured belong to the American Transatlantic Steamship Company in which the British claim German capital is interested. The seizure is contrary to the Declaration of London but the British and French Governments have recently repudiated the clause which declares that the nationality of a ship is determined by her flag.

The Standard Oil tank steamer "Communipaw" is supposed to have been sunk by an Austrian submarine off the Tripolitan coast. A wireless message is thought to come from her was received on December 7 and no trace of her has been found since.

An Austrian submarine held up the American tank steamer "Petrolite" in the Mediterranean and forcibly took provisions from her.

In a debate in the House of Lords the Earl of Portsmouth declared:

> If the Declaration of London is not in force, why, in heaven's name, could we not fall back on the old sea laws of our ancestors, which gave them victory? The country wants to get rid of all this rubbish —the Declaration of London and the Hague Convention. We want to sweep away all radical nostrums and win this war by placing British interests and the interests of our allies as the only interests, first and supreme.

In reply Lord Lansdowne called attention to the fact that a treaty of arbitration was concluded last year between the United States and Great Britain and should not be disregarded. Viscount Bryce took the same side and said:

> A great deal of the fabric of international law has been shattered. The great task of the future will be to rebuild that shattered fabric. It would be most desirable at this country were to go beyond what has been considered to be settled international law and make her own will and her own necessities the judges of her actions.
>
> The plea of necessity has led to many atrocious actions. We came forward as the champions of international rights and the defenders of international law and it would be a misfortune if we were to depart from that position.

Constantine to America

To an Associated Press correspondent at Athens the king of the Hellenes gave an interview in which he explains his policy to the American people and protests against the violation of Greek neutrality by the Allies. Since little has been heard of the King's side of the controversy, we quote as fully as possible his statement:

I am especially glad to talk for America, for America will understand Greece's position. We are both neutral, and are together determined, if it is humanly possible, not to court destruction by permitting ourselves to be drawn into the frightful vortex of the present European conflict. Both are trying by every honorable means to guard our sovereignty, protect our own people, and stand up for our national interests without sacrificing that neutrality which we recognize as our only salvation.

America is protected from immediate danger by the distance which separates her from the battlefield. We, too, thought that once, but the battlefield shifted, and may shift again. What is happening in Greece today may happen in America, Holland, or any other neutral country tomorrow, if the precedent now sought to be established in the case of Greece is once fixed.

From the very outset of hostilities in the Near East, Greece's neutrality has been stretched to the utmost to accommodate the Entente powers, for whom we have always felt the keenest sympathy and the deepest gratitude. The Dardanelles operations were directed from Greek islands occupied by allied troops. When Serbia was endangered by the combined Austro-German and Bulgarian attack the allied troops landed unopposed on Greek soil, from which, with the second city of Greece as a base, they prosecuted not only unmolested, but aided in every way consistent with any sort of neutrality, their fruitless and too long delayed campaign to rescue their ally.

Yet, despite all these evidences of the good faith of Greece, the Entente powers now demand, in a form which is virtually an ultimatum, that the Greek troops be withdrawn from Saloniki, and that means all Macedonia, leaving our population unprotected against raids by Bulgarian comitadjis or all the horrors of war, which laid Belgium waste, should the Allies be driven back within our frontiers.

Just suppose the Germans were in a position to demand that your country concede the use of Boston or Seattle as the base for an attack on Canada. What would you say? And if all your military experience and the advice of your General Staff told you that such a landing was doomed to failure because made with an inadequate force, and you realized that the British troops in Canada would pursue the retreating Germans across New England, destroying as they went, would you accept the prospect without a struggle?

ROADS LIKE THESE DO NOT HALT THE GERMANS

A hopeless road thru Serbia, littered with carts abandoned by the Germans, who have nevertheless managed to force the Allies out of the country

Another thing I want to make clear: It is said that M. Venizelos, with my assent, invited the allied troops to come to Saloniki. Nothing could be further from the truth. M. Venizelos may have exprest the personal opinion that if the allied troops landed at Saloniki Greece would not resist. How could she resist? But that M. Venizelos ever, as the responsible head of the Greek Government, formally invited foreign troops to enter Greek territory, is wholly untrue.

The Entente's demand is too much. They try to drive Greece out of neutrality, they come into Greek territory and waters as tho they were theirs. At Nautlia they destroyed tanks of petroleum, intended to kill locusts, on the ground that they might be used by German submarines. They stop Greek ships, they ruin Greek commerce—as they have done with American ships, too. They want to seize our railways, and now they demand that we take away the troops guarding the Greek frontiers, leaving my country open to invasion or any lawless incursion.

I will not do it. I am willing to discuss reasonably any fair proposals. But two things I will not concede: Greece shall not be forced or cajoled out of her neutrality; Greece will maintain her sovereignty and her sovereign right to protect herself at need.

President Wilson's Message

Congress assembled on the 6th after a recess of nine months, and on the following day President Wilson read his annual message in the Chamber of the House. During the great war, he said, we had stood apart, studiously neutral, and it had been our manifest duty to do so, for we had no part or interest in the policies which brought on the conflict and it was necessary that some part of the great family of nations should keep the processes of peace alive, if only to prevent collective economic ruin. The nations of America had become conscious of a new and more vital community of interest. Long ago, when the republics of Central and South America were fighting their way to independence, our Government looked upon itself as their guardian against encroachment from Europe, and played the part even without invitation, but with an unselfish spirit. It was difficult, however, not to offend the pride of those whom we sought to protect, or to avoid misconception of motives. Now there is no claim of guardianship, but, instead, a full and honorable association as of partners. Our interest is the same. We mean always to make a common cause of national independence and political liberty in America. But it is now well known that we have no selfish purpose, no thought of taking advantage of any Government in this hemisphere. We have stood the test in Mexico. The states of America are not hostile rivals, but coöperating friends. This is Pan-Americanism.

Turning to national defense, Mr. Wilson said that our passion is for peace. But we resent the aggression we will not practice, and have made common cause with all partizans of liberty on this side of the sea. We believe in a body of free citizens ready and sufficient to take care of themselves and the governments they have set up. War is a thing of disciplined might. The Government should supply to citizens the training that is needed. Congress should sanction the War and Navy Departments' plans for more adequate national defense. Mr. Wilson gave the details of these plans. So much in the way of preparation seemed absolutely imperative. "We cannot do less." Taking up the subject of the merchant marine, he asserted that we ought to have ships enough to handle our own

OPENING THE NEWEST SUFFRAGE CAMPAIGN

Tho there is dissension in the suffrage ranks over the methods to be employed, the women workers are agreed in throwing their energies for the present into the fight to persuade Congress to pass a national woman suffrage amendment. A California petition with half a million names was carried by this delegation which stormed the Capitol at Washington

commerce. Private capital could not do the great task of a sudden. The Government should begin, and at once. Congress would be asked to provide for the purchase or construction of ships to be owned and directed by the Government. He commended the bills to be submitted for altering the government of the Philippines and giving fuller political justice to Porto Rico.

The use of bonds to meet the additional expenses due to the military and naval plans he opposed. We should pay as we go. He recommended an extension of the term of the emergency currency law, and retention of the sugar duty. He then suggested an increase of income taxes by lowering the exemption limit and raising the surtax, and pointed out that taxes of one cent a gallon on gasoline, of 50 cents per horsepower on automobiles, stamps on bank checks, and 25 cents a ton on pig iron and fabricated steel, would yield about $63,000,000.

He then very sharply denounced citizens of this country, born under other flags, who had poured the poison of disloyalty into the arteries of our national life. Our country had never dreamed that men of such origins and such free choice of allegiance could turn in malign reaction against the Government and people who had welcomed and nurtured them. But the ugly and incredible thing had actually come about and we had no adequate Federal laws to deal with it. He urged Congress to enact the needed laws at the earliest possible moment, to crush out such creatures of passion, disloyalty and anarchy. They were not many, but they were infinitely malignant. They had formed plots to destroy property, had entered into conspiracies against our neutrality and had sought to pry into every confidential transaction of the Government in order to serve interests alien to our own.

In conclusion, the President said we should give intelligent Federal aid and stimulation to industrial and vocational education, and make some provision for rural credits. He also suggested that a commission should be appointed to study the transportation problem. The regulation of railroads by a Federal commission had shown admirable results, but the question was whether there was anything else that should be done to better the condition of the railroads and to make them more useful servants of the country.

Pursuing the Plotters

Our Government has decided to make a thoro investigation of the work of those who have plotted here to destroy ships and munition factories and to cause strikes among employees of companies that have war orders. Much evidence not given to the public has been obtained by the Department of Justice. In New York a Federal grand jury is making an inquiry about Labor's Peace Council, an organization formed in June last, and of which Congressman Buchanan was for a time president. The Federal District Attorney, Mr. Marshall, says in a published statement: "For some time I have had information that this organization was financed with money furnished by Franz von Rintelen thru David Lamar. A part of the activities of Labor's Peace Council consisted in stirring up strikes in various plants engaged in the manufacture of war munitions." Strikes were "purchased," he asserts.

Franz von Rintelen, now a prisoner in the Tower of London, left this country on a fraudulent passport soon after the arrest of General Huerta. It is alleged that the projected revolutionary raid of Huerta had been financed by him, and that as much as $30,000,000 was at his disposal to be used in his plots. The expenditure of $500,000 has been traced by our Government. It was thought that the Mexican plot would compel intervention and war, and thus prevent sale here of munitions to the Allies, because such supplies would be needed for our own use. It is said that $300,000 was spent in fomenting strikes. Germany now says that the man was not a representative or an agent of the German Government. Reports say that he was treated as a superior officer by Captain Boy-Ed and Captain von Papen, the attachés whose recall our Government recently demanded. The Kaiser has consented to recall them and has asked our Government to procure for them a safe conduct.

Attorney General Gregory asks Congress to enact laws making it a crime against the United States to place bombs in outgoing ships, and for a person to escape from the interned warship of a belligerent. While the ship "Tyringham" was loading with sugar at a Brooklyn pier some days ago, a bomb exploded in her hold. After her departure and while she was at sea, a fire was started in her cargo by a bomb. The police arrested in New York, last week, an Austrian named Mente, who had in a tenement a laboratory stocked with explosives, acids used in making them, and clock movements. Fay and his associates, recently indicted for plotting bomb explosions to destroy ships, were indicted again last week. A man suspected of having caused the fire at the Bethlehem Steel works escaped three days after the fire, going southward on a ship bound for Rio Janeiro. Wireless messages led a British cruiser to take him from the ship a few days ago. It is not yet known whether the fire that, on the 9th, destroyed 400 buildings at Hopewell, Virginia, the new town of 25,000 people built up in a few months around a Du Pont powder factory employing 18,000 persons, was the work of plotters. A man believed to be a German spy had been arrested at the works a day earlier. He had nitroglycerine and other explosives in his possession.

Mr. McCall and His Successor

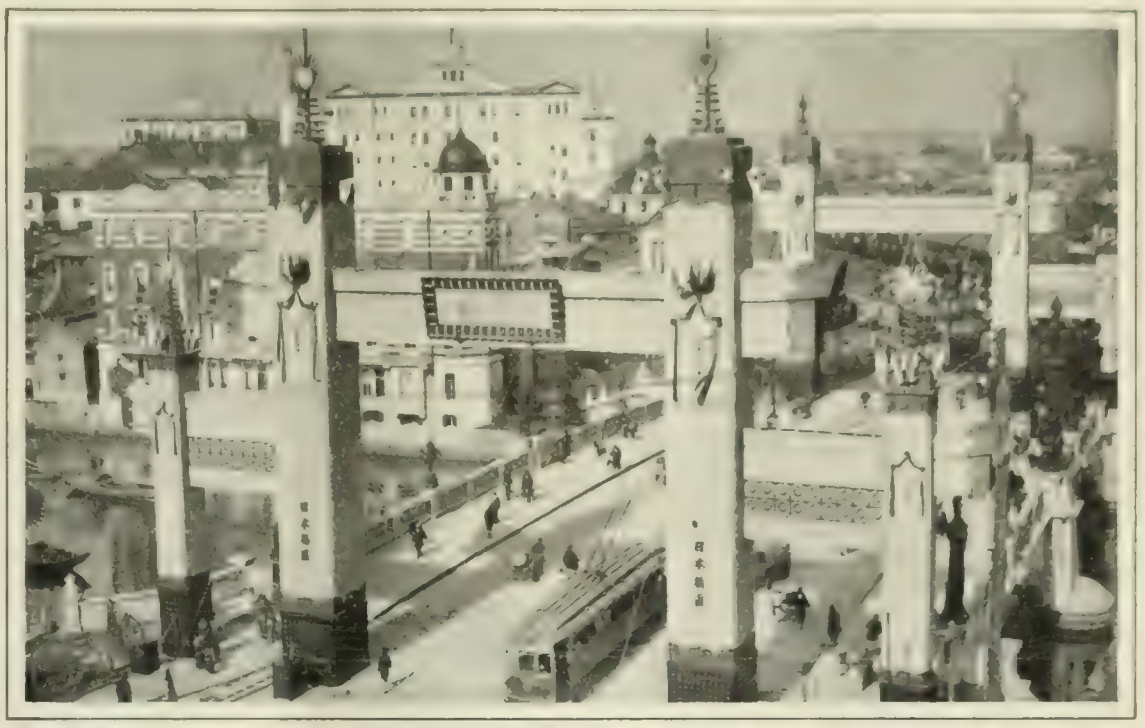
Owing to the charges made by a joint legislative committee appointed to investigate the two Public Service Commissions of New York, Governor Whitman has removed from office Edward E. McCall, chairman of the commission, whose territory is the southern part of the state. The stated cause of removal was the commissioner's relation to 387 shares of the stock of the Kings County Light and Power Company, a corporation under the commission's supervision. The Governor said, in his opinion, that the law plainly provided that no one should be eligible for the office who owned stock of a corporation subject to such supervision. Mr. McCall asserted that he had transferred the stock to his wife, but there is no evidence of such a transfer and no indication of any attempt by Mr. McCall to comply with the requirements of the transfer tax law. If a transfer was made, Mr. McCall's violation of the tax law was a misdemeanor, punishable by imprisonment. The Governor points out that the accused commissioner was for several

years a justice of the New York Supreme Court. And if transfer to his wife was really made, this was done in defiance of the spirit and intent of the statute. Mr. McCall was appointed by Governor Sulzer, at the request of Mr. Murphy, the Tammany leader.

In Mr. McCall's place the Governor has appointed Oscar S. Straus. President Cleveland made Mr. Straus Minister to Turkey, and he was reappointed by President Harrison and President McKinley. President Roosevelt made him Secretary of Commerce and Labor, and President Taft sent him to Turkey again, this time as an Ambassador. In 1912 he was the Progressive party's candidate for Governor of New York. He founded the National Civic Federation and has been president of the New York Board of Trade and the American Social Science Association

Alien Labor Law Sustained

About a year ago, the Bricklayers' Union in New York demanded enforcement of an old law of the state forbidding the employment of aliens on public works. This demand was aimed at contractors engaged in building the new subways in New York City. It caused some delay of the construction work, for many workmen were discharged. Two suits went to the courts. In one an injunction was sought, to restrain the Public Service Commission from forfeiting any contract for violation of the law, the plaintiff claiming that the statute was unconstitutional. In the other a contractor, the secretary of the General Contractors' Association, was attacked because in two or three small projects he employed a few aliens. The constitutionality of the law was upheld by the state's highest court. It has been sustained again, and finally, by the United States Supreme Court.



"It belongs to the state, as guardian and trustee for its people, and having control of its affairs," said the court, "to prescribe the conditions upon which it will permit public work to be done in its behalf, or on behalf of its municipalities. No court has authority to review its action in that respect. Regulations on this subject suggest only considerations of public policy." The court also held that the law was not at variance with the Fourteenth Amendment or the provisions of the treaty with Italy. Public work in New York will not be appreciably affected by the decision, for the law was so amended last year that the prohibition is removed, the modified statute saying that preference must be given to citizens, and that aliens may be employed when citizens are not available. The decision is not in conflict with the recent one annulling Arizona's anti-alien law, for that statute related only to employment by private firms or corporations.

The Situation in Mexico

General Carranza has named Eliseo Arredondo, his cousin and confidential agent at Washington, to be Mexico's Ambassador to the United States. It is expected that President Wilson will appoint Henry P. Fletcher, now Ambassador to Chile, Ambassador to Mexico. Mr. Fletcher, a Republican, has been in the diplomatic service thirteen years. Great Britain has formally recognized the Carranza Government.

Villa's forces have been driven from the state of Sonora. His main army was whipped near Hermosillo by General Dieguez, and more than 1000 of his men surrendered. His Yaqui Indian general, Urbalejo, with 1400 followers, also submitted to the authority of Carranza. General Rodriguez, a Villa commander, who was driven from Cananea by Obregon, took his forces, several thousand men, to a point about twenty miles from Agua Prieta. There, in a two days' battle, he lost half of his little army and then retreated to Chihuahua. It appears that Villa is practically out of the field. Reports have come to General Funston, the American commander, that, in resentment for the recognition of Carranza's Government, he is planning guerrilla raids upon American towns near the border. Carranza has promised that there shall be no more bandit raids across the line if he can prevent them, but he adds that "recognition without physical assistance is of no value" and complains that our embargo on exports of arms and ammunition is ineffective. He and his forces have received 400 carloads of ammunition and food from our side of the line in the last ten days. The Yaqui Indians are again on the war-path, and American settlers in the Yaqui Valley who have suffered losses are calling upon our Government for help. By an agreement made in New Orleans and New York bankers with the Governor of Yucatan, the hemp growers in that state are to be assisted by advances of $10,000,000, upon the security of bills of lading and warehouse receipts.

A controversy has arisen about the harsh treatment of Catholic priests and nuns by Carranza's forces. Answering a brief inquiry from Dr. McGuire, of Trenton, New Jersey, Joseph P. Tumulty, President Wilson's secretary, wrote and gave to the public a letter of several thousand words, tending to

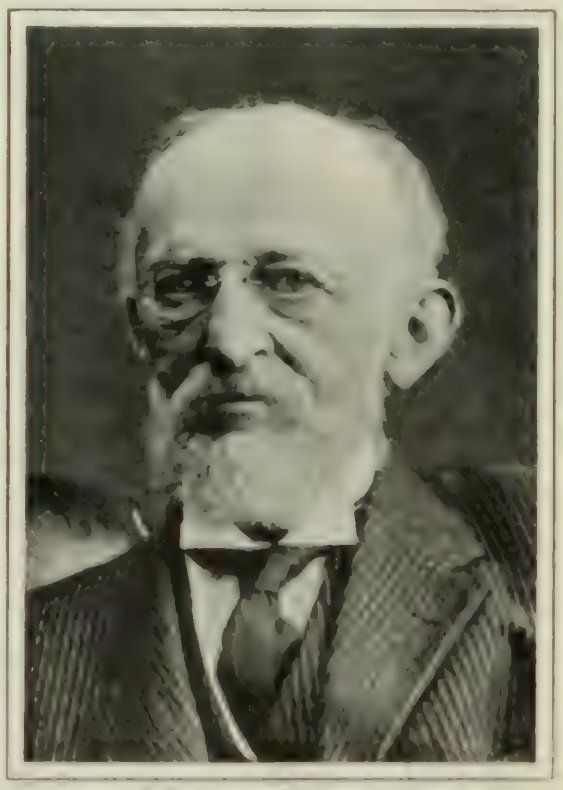
discredit some of the reports and asserting, with reference to assaults upon nuns, that the State Department's files contained no official record of "a single proved case of this dastardly crime." There was a prompt response from prominent Catholic clergymen and editors of Catholic journals, including officers of the American Federation of Catholic Societies and Monsignor Kelley, the head of the Catholic Church Extension work, who assert that they have a considerable number of affidavits concerning the crime in question, sworn to in the presence of United States officers; that these have repeatedly been offered to the State Department, and that several of them were submitted to the President more than a year ago. A list of the losses of the church by spoliation in Mexico has been published. It relates to the destruction of convents, seminaries, churches, schools and the dwellings of clergymen, and the total is $4,399,000.



Overcrowded Porto Rico

At the recent Lake Mohonk Conference one of the speakers was Governor Yager, of Porto Rico, who said that the population of the island had become so great, about 1,250,000, that a considerable number of the inhabitants should be transferred to some other place. The great density of population presented an important problem, for the reason that any unforeseen calamity affecting the local industries would cause destitution which the insular Government could not relieve. "If, as now seems certain," said he, "under the present tariff law, the protective duty on sugar should be abolished, and the decline of the sugar industry, which everybody predicts, should take place, the problem of feeding the unemployed would become a very serious one." Here he referred to the statute which makes sugar free of duty after May next. Secretary McAdoo has given notice that he will recommend repeal of this law, because the Government will need the revenue.

Governor Yager suggested that emigration of Porto Ricans to Santo Domingo, only seventy miles away, with about thirty inhabitants to the square mile, as compared with Porto Rico's 350, with similar climate, physical characteristics, products, people and language, and large tracts of land awaiting cultivation, would be an ideal solution of the problem. The most direct and simplest way of getting the desired relief "would be the annexation of Santo Domingo," but this might be prevented by political and international difficulties. He urged that our Government should make treaties with Santo Domingo providing for the acquisition of land by Porto Ricans, and for guarantees that they would be protected in their rights. Thus both islands would gain benefit by a redistribution of population. He also recommended that United States citizenship should be granted to Porto Ricans, with power to elect their Senate, and deplored the grant of suffrage to all males over twenty-one years of age, saying that about 70 per cent of the voters thus made were illiterate, and that no healthy political life was possible under such conditions.

Yuan's Coup d'Etat

On December 11, President Yuan Shih-kai announced his acceptance of the throne of China tendered him by the Council of State. It has long been apparent that a movement was on foot for the overthrow of the republic and the reëstablishment of the monarchy and the representatives of the Allied Powers, Japan, Russia, Great Britain, France and Italy, advised the Foreign Office at Peking that any change in the form of government was inadvisable at the present time. The United States declined to join in the protest. The Minister for Foreign Affairs replied that since a majority of the provinces had voted in favor of the restoration of the monarchy it was impossible to do otherwise.

Underwood & Underwood

OSCAR S. STRAUS

The new chairman of the Public Service Commission of New York. Former ambassador to Turkey, Secretary of Commerce and Labor in Roosevelt's Cabinet, and Progressive candidate for the governorship of New York. His appointment by Governor Whitman is undeniably good news and may be considered good politics.

Since the provincial notables to whom the question was referred were appointed or controlled by Yuan this so-called will of the people was obviously a mere reflection of his wishes. His repeated protests of reluctance to assume the throne and of loyalty to the republic have never found credence either at home or abroad. The republicans of China have distrusted him from the start and two years ago they started an insurrection in the south in order to depose the President before he should establish himself as monarch. But the rebellion was quelled and its leader, Dr. Sun Yat-sen, took refuge in Japan.

Dr. Sun is now apparently renewing the attempt to prevent the overthrow of the republic. Risings in which he is said to be concerned are reported from many points in both northern and southern China. At Shanghai a band of revolutionists managed to seize the Chinese cruiser, "Chao-ho," used as a training ship. They then opened fire on the arsenal. Two Chinese cruisers and a gunboat in the harbor surrounded the "Chao-ho" and fired upon her. In the ensuing bombardment several shell struck houses in the English city of Shanghai. The insurgents abandoned the "Chao-ho" in the evening for a hole had been put in her side and she had been set on fire by the shells. Many of the insurgents were caught and executed.

A month ago it was given out with great positiveness at Washington that Great Britain, France and Russia had asked China to join the Entente Alliance and there were rumors to the effect that President Yuan had offered his support to the Allies if they would recognize his sovereignty. But recently the Chinese Government denied that it had received any such proposals from any source or ever considered the possibility of abandoning neutrality.

THE WORLD NEEDS MEN

A CHRISTMAS MESSAGE FROM

CARDINAL GIBBONS

WHAT is the greatest need of our times for the betterment of Christian society? Is it churches? Temples of worship are indeed very necessary. The construction of elegant and well-adorned houses of worship is an evidence of the faith and devotion of the people. But they are not the most essential thing for our day. The primitive Christians paid homage to God in the catacombs, and some of our forefathers adored their Lord under the canopy of heaven, in secluded mountains, and in caves of the earth. And they were the best of Christians. Moreover, what would be the use of churches if we had no worshippers to frequent them?

Is it schools that are most needed? Christian schools are indeed demanded, for the preservation of the faith and morals of the rising generation. A parish is not complete without a school. But they do not constitute the most essential requisite. There have been dark periods in the Church's history when Christian schools were not tolerated, and their absence was supplied by heroic mothers who nourished the seeds of religion in the hearts of their children.

Is it hospitals and sanitariums that the time calls for? Hospitals are indeed the landmarks of Christian civilization, and contribute immensely to the alleviation of human suffering. But they do not constitute the greatest need of our day. They relieve the misery of only a small portion of the community.

Does the country need majestic and colossal state houses for our legislative bodies? The convention that met in Philadelphia in 1787, to devise the most momentous Constitution ever framed for the civil guidance of men, assembled in a hall not conspicuous for its majestic proportions.

The call of the times is for men, sturdy Christian men, and women too, endowed with the courage of their convictions. We need men who are controlled by conscience rather than by expediency, men who are guided by principle rather than by popularity, men who are influenced by a sense of duty and not by self-interest, who are swayed by a spirit of patriotism rather than by a desire of political preferment. Above all, we need men of strong Christian faith who are prepared to uphold their religious convictions in the face of obloquy and popular prejudice. In a word, we need men and women of upright Christian character.

But this fidelity to religious and moral principle demands no small measure of heroic virtue. Many a soldier who fearlessly rushed to the cannon's mouth has quailed before the shafts of ridicule. The man who calmly fulfils a duty against public clamor displays a higher courage than the captain who captures cities. The man who acts up to his conscience has but one master, and that master is God. But the slave of human opinion has as many masters as there are individuals whose censure he dreads, or whose smiles he secures at the expense of duty.

That is why I not only am hopeful, but feel a certain assurance that the republic of the United States will continue for innumerable generations to come. I base my belief on the genius and good sense of our public men, the wisdom of our legislation, and on the patriotism of our people at large. The evidence of these characteristics of our nation that the republic will persevere is all the stronger because we are a religious nation.

Amid the continual changes in human institutions, the Church is the one institution that never changes. Amid the universal ruins of earthly monuments, she is the one monument that stands proudly preëminent. Amid the general destruction of kingdoms, her kingdom is never destroyed. Ever ancient and ever new, time writes no wrinkles on her divine brow.

The Church has seen the birth of every government in the world, and it is not at all improbable that she shall also witness the death of them all, and chant their requiem. She was more than one thousand four hundred years old when Columbus discovered our continent, and the foundation of our republic is as yesterday to her. She calmly looked on while invaders swept like a torrent over Europe, subverting dynasties. She has seen monarchies changed into republics, and republics consolidated into empires. All this she has witnessed while her own divine constitution has remained unaltered.

What a subject of great glory to be a citizen of the Republic of the Church, which has lasted for nineteen centuries and will continue till time shall be no more, which counts her millions of children in every clime, which numbers her heroes and her martyrs by the thousand! Every individual has a mission from God to help his fellow-being! Differ in faith as we may, we stand united upon the common ground of charity and benevolence and of good will to all men.

Baltimore, Maryland

THE INSANITY OF PREPAREDNESS

AN INTERVIEW WITH CONGRESSMAN KITCHIN

BY CHARLES PHILLIPS COOPER

ON the eve of the opening of Congress, which promises to be the most tumultuous in years, almost overwhelmed with the details which fall to a floor leader, Chairman Claude Kitchin, the new head of the Ways and Means Committee of the House of Representatives, outlined for the readers of The Independent his views on the pressing problem of the hour —preparedness. Mr. Kitchin before this has announced his opposition to what he calls the hysteria of the moment, and the "extravagant and revolutionary" ideas which the preparedness advocates wish Congress to sanction. His general hostility to the plans which are to be offered to Congress is no new thing, yet, as he said, "I am not opposed to preparedness, orderly preparedness, such a policy as we have followed for the past five years—it is this insane preparedness propaganda that arouses every bit of fight that is in me."

© Underwood & Underwood

CONGRESSMAN CLAUDE KITCHIN

From that declaration Chairman Kitchin, fresh from a meeting of the Ways and Means Committee of the old Congress, at which were discussed plans for organizing this new Sixty-fourth Congress, considered some of the problems which follow in the wake of preparedness legislation, some of the "sequelæ of the disease," as it was exprest by a medical man.

Chairman Kitchin's views as they are set forth in the following interview were carefully considered.

"I want to explain my position," he said. "I want the people to know what this movement means. I want them to know what it will mean in taxes, what it will mean in men.

"But first let me make it plain that there is no official hostility on my part to the President. Our relations are most pleasant. We thoroly understand each other. I know that he is convinced, deeply and sincerely, that his program is right. He knows that I am thoroly convinced that it is wrong. He knows, too, that my convictions on the subject are deep and sincere, and that I have given the subject mature study and thought, and have reasons for my position.

"A few weeks ago I had a most cordial and pleasant interview with him for an hour and a half. On this question we simply agreed to disagree, both expressing regrets, and I am sure sincere regrets, that I could not support the program. As he said in his Manhattan Club speech and assured me as well as others, this question is not a party question, but one for the thought and conviction of each individual."

To the great Ways and Means Committee will fall the duty of raising the revenue to meet the extraordinary expenses which the preparedness program will entail. It has been estimated that the five-year program will call for a billion of dollars in addition to the present revenues. Opponents of preparedness have said that this expenditure was the crux of the problem. The question was put bluntly to Mr. Kitchin:

"Grant for an instant that the preparedness plan is adopted by the present Congress. How do you expect to raise the money to pay the bills?"

The chairman's reply was prompt, and there was in his tone an inflection of decisiveness that made his hearer understand that in his opinion the people had not given the matter of dollars and cents sufficient attention.

"The Lord only knows," he said, "and I am sure that neither the Administration, the Ways and Means Committee, nor Congress knows."

It was after a hard day's work in the committee room that Mr. Kitchin discussed the program before the new Congress. He was sitting in his office in the Capitol, adjoining the big meeting room on the door of which are the words "Ways and Means Committee." When he reached this office at 9.30 o'clock in the morning, callers were sitting about anxious for a moment's conversation with the floor leader, the most powerful man of the House, since, in the days of "Uncle Joe" Cannon, the Speaker's wings were clipped. At ten the committee met and the patient visitors were told that the chairman would return just as soon as he could. Many waited for him. Others, knowing the ways of Washington and the habits of committees, gave up their quest for the day. It was five in the afternoon before the chairman was released from his consultations with fellow members. His hurried dinner followed, and then an evening of more work in the plain old room in the Capitol.

"I am staying here until two in the morning these days," he said.

The new leader of the Democratic majority in the House is a big figure of a man. Six feet tall to an inch, he weighs 220 pounds, and looks as hard as an athlete. His iron gray hair is wavy over a broad forehead. In his speech is an indication of his southern origin, for he is essentially a southern man. He comes of a distinguished North Carolina family which has a record for raising statesmen. Born in Scotland Neck, a village of 2000 inhabitants in Halifax County, away over to the east near the Virginia line, he has lived there all his life. Down home he is a lawyer known to the youth of the community in the pleasing southern fashion as "Mr. Claude." Born on March 24, 1869, he was graduated from Wake Forest College in 1888, was admitted to the bar in 1890, and since that time has been in practise at his home town. Mr. Kitchin has nine children, six daughters and three sons. He has been in Congress since 1901 as a member of the Second North Carolina District. William

Walton Kitchin, a brother, was a representative from the Fifth District of North Carolina from 1897 to 1909, when he became Governor of his state for a term of four years. The chairman's father was the late William H. Kitchin, a member of the Forty-sixth Congress. In brief these are the main facts in the career of the man who, just assuming the duties of the chairman of the Ways and Means, and the floor leadership of his party, takes what has been described as the unpopular side in the great burning question of the day, seemingly to his own disadvantage.

"Do you expect to win this fight?" he was asked, "or do you expect the preparedness plan to go thru at this session?"

"I hope," the chairman replied, "that, even if we do not win the fight, the proposal will be modified considerably. Whether we defeat this extravagant program or not, it is our duty to fight it. And right here I want to say that in this matter I am fighting because I think the proposal is wrong—morally wrong. I cannot make this too clear, for I know that I am butting a strong tide now which is all for preparedness at any cost. I want the people to understand both sides of this question, for I believe that when they do understand both sides, as I hope they all will after it has been threshed out in Congress, they will oppose further steps in militarism.

"I have been here for more than a decade and have been in Republican congresses where opposition to the protective tariff I knew was hopeless, but my opposition was based on the conviction that it was wrong and we fought on, knowing that we would be defeated, but hoping that we would finally win. I fought the Payne-Aldrich tariff measure to the end, believing that in the end right would win.

"In that way I am fighting this extravagant preparedness program. I believe in normal preparedness, but not in the hysterical variety.

"The huge burden which this fabulous increase of appropriations for the army and navy will place upon the taxpayers can and will have to be borne in spite of their protests which will surely come in the future. This in itself to me is a cruel wrong. But the big overreaching objection to this stupendous program is that this sudden radical and revolutionary move for war preparation on our part is going to shock the civilized world, and, whatever may be the outcome of the present war, will alarm the world again into an armed camp. It will postpone for generations the day of universal peace, for which all Christendom has been praying. It will deprive this Government, thru its President, of the greatest opportunity to serve mankind that ever came to nation or to man, in the final negotiation of peace terms among the belligerents, to lay the basis of perpetual international peace.

"Now as to the matter of taxes which will follow upon the heels of preparedness. When we begin to frame revenue measures to meet the proposed gigantic increases in appropriations for the army and navy, the fellows who now are shouting for preparedness will be the vocal leaders in a howling chorus against any measure to lay taxes in order to pay the bills. If the measures proposed do not tax their particular business they will be all right, but just watch out for the howl that will come from the particular interests that are taxed, for we will have to pay for preparedness. It will be another case of the man who does not care if his neighbor's ox is gored. If the tax hits him he will alter his views on preparedness.

"When they begin to pay the taxes, the people generally, who now are crazy over preparedness and do not know what it means, are going to ask, 'What is this for?' When they find that it is to pay the preparedness bill they are going to damn preparedness.

"But let me say right here that if this 'outrage' is put upon the statute books I will cheerfully coöperate with the President in finding ways and means to finance it. The enormous sum to be raised ultimately will require the combined wits and brains of all of us."

Mr. Kitchin turned again to the present session of Congress and a consideration of its work. An anomalous condition such as has not existed in years prevails. With the Democrats in power and able to carry out any policy they as a party may elect, the House leader, a man from the South, at his first session, is off the reservation. Mr. Kitchin was asked to comment on the situation, especially as to the probable effect on his future political career. The chairman thought for a moment, then he said:

"In the face of the grave danger to our country and its institutions which this preparedness program presents, I do not consider my political career at all. I have been in Congress for fourteen years, and I never yet in casting a vote considered whether or not it would help me or harm me in a political way. That is how I feel about this."

"There have been reports, Mr. Chairman, that you are actuated in a degree by spite or pique in your opposition, on the ground that you did not receive your rightful share of North Carolina patronage from the Administration."

"There is not a word of truth in it," replied the leader of the anti-preparedness forces. "Every man in the Administration here and every man in North Carolina knows that there is no truth in that charge. It has not even been intimated here. If such a report has been circulated elsewhere, it is baseless.

"You ask why I fight preparedness; why I should lead a forlorn hope. First, I do not grant for an instant that it is a forlorn hope. It is true that I am taking the hard course. It would all be easy sailing for me if I went with the crowd. I would have nothing to lose and possibly might gain, but I choose, as a matter of conscientious belief, to go against the crowd. I knew that I would be reviled and misrepresented when I determined to oppose extravagant preparedness. I told my wife down in North Carolina that all sorts of attacks would be made on me as soon as I announced my opposition. 'Don't let it disturb you for a minute,' I said, 'for I expect it.' The attacks are not worrying me.

"As for my course at this session—I will fight to the end in opposition to the program as outlined today by the Secretary of the Navy and the Secretary of War. I am in favor of preparedness in the real sense; I am in favor of the normal, regular program. I favor going on gradually and steadily, but I oppose this revolutionary step.

"This is no new thing for me. I have been fighting against the Hobsons and jingoes here for ten years, and today am following the matured convictions which I have always held.

"No man in this country was more surprized than I was when about two months ago the President and Secretary Daniels changed their attitude on this question. I stand where they stood in 1913 and 1914, and I had been equipping myself during the summer to defend the naval policy which they insisted, at the last session, this country should pursue, against the attacks of the Hobsons, Gardners and jingoes. I have not changed.

"To sum it all up: This is not a party or partizan question. The President so declared in his Manhattan Club speech. It is one for the conscience and judgment of each individual."

THE IRONY OF THE TRENCHES

THE ROAD TO PROSPERITY

BY F. A. VANDERLIP

PRESIDENT OF THE NATIONAL CITY BANK OF NEW YORK

WE are in a wonderful period of the world's affairs. The times are so extraordinary that it is difficult to feel certain enough of one's bearings to attempt to speak with any authority even about the immediate conditions. When it comes to an attempt at gaging the future, the prophet faces peculiar difficulties; for in many ways we seem to have cut loose from old moorings. Precedents go for naught. Experience of the past we cannot feel sure is any safe guide to the future.

After several years of light trade and slack industry, of dormant enterprise and of small ambition for expansion, the business world is seeing signs of better times. We have been none too sure, however, of the character of these signs. We have distrusted the prosperity that seems to spring from calamity to other peoples. It has been an evident fact that much of this new prosperity, which is quickening many branches of industry, is related directly or indirectly to the war.

We know nothing of when the war will end, and nothing of how long this special demand will continue. We know that possibly before it ends foreign purchases in this market will have to be curtailed because the means of payment may be lacking.

In some quarters there is an easy-going optimism which seems to believe that these enormous purchases will go on somehow because the chief buyers must have the goods. Upon that theory some sections of the country declined to take any share of the recent loan, made to stabilize the exchanges, even tho those same sections were vitally interested in the exportation of products; and then even indulged in criticism of those who did participate, chiding them for making investments abroad, altho every dollar of the loan was to be expended in this country.

There is a class of business men whose concept of foreign trade seems not to be broader than their rule of cash at the dock! They seem to feel that foreigners must buy from us, and we have only to fix the terms and see that we get cash in hand before we ship.

That theory of imperative purchases is erroneous. No matter how much an individual or a country may need to buy, neither an individual nor a country can buy unless the means can be found to pay. Payment means something more than merely giving mental assent to a purchase.

I know of but three ways in which a foreign purchase may be paid for. The obvious way is to pay for it in gold, but of course very little can be paid for in that manner. The ordinary way is to pay for it by exchange credits, created by the sale of products, or, under special stress, by the sale of foreign securities and other forms of investment already existing outside the country which is making purchases. The third way is by effecting new credits thru loans.

All that seems a very simple and trite statement, but we should keep it quite clearly in mind. We can only be paid for our goods thru the shipment of gold; by means of exchange made thru the purchase by us of products or securities; or, lastly, by making loans to the purchaser.

When you have past beyond the use of credit, it means the transfer of property of some kind, and when you come to inventory the property of a country you find that little of it can be transferred across the ocean. You cannot move the lands or structures; you cannot afford to move any of the productive equipment, you cannot advantageously transfer the securities which represent interests in domestic corporations, for they are all subject to home taxation, and hence are not as good as the obligations of Governments themselves.

If we are to have important and growing commercial relations with the rest of the world, we must provide the rest of the world with the means of paying for products. We can only make this possible by buying what they have to sell us, that is, products, securities, or their own credit obligations.

A great stimulus to the industries of this country has been the war. The wheels have been started; the dead inertia has been overcome. Today the business machine is running at a speed and with a power never exceeded. On the one hand, the vast foreign trade balance in our favor has given us an easy money situation that is unparalleled, while on the other, a crop of unexampled value has added to the stimulation. It seems reasonably clear, then, that we may for some time look forward to a tremendous volume of business. Our problem now is to get ourselves independent of war business as quickly as possible, which, with the exercize of intelligence and coöperation, we can do.

Fortunately, this is a country of widely diversified resources. Its products and its industries are so well balanced that they are more nearly mutually supporting than those of any other country in the world. When we are doing the amount of construction which our national growth requires, we have good times generated within our borders with little help from abroad. That is a position that we want to get into.

In the past, we have had to look to Europe for capital to finance every great movement in our development. Under present conditions we could not do that, and, fortunately, have no need for doing it. There is capital available in this country to inaugurate enterprises that will employ every man in the country without a dollar's worth of war business.

If conditions can be created that will give confidence to capital, so that the owners of it will be disposed to invest it freely, both in internal development and in granting external credits which in turn react favorably upon our industries, we will become independent of war orders.

There is no lack of capital, I believe, for all the needs of our domestic commerce, and an ample surplus to use in granting credits to other countries. We scarcely comprehend our own wealth. Give to investors such confidence in the security and profitableness of the investments offered them that they will put their full capital resources into active reproductive work and the available total will meet any demands we can foresee.

There has been a demonstration in the world in the past fifteen months of the wonderful extent of credit when the people are aroused and in earnest. We have seen unheard of sums raised with apparent ease. If Great Britain and Germany can each raise approximately six billion dollars in fifteen months for war purposes, what could the United States do for industry, for its own progress, and to support the progress of the world in this time of universal calamity, if a spirit of unity and high purpose could direct its action?

Suppose, if you please, that it were possible for a wise and benevolent despot to direct the affairs of this country for the next few years, what an opportunity he would have to place this nation rightfully and usefully in the van of the world's progress. He would threaten no existing industry, but breathe into every one a new confidence in its future. He

This article was recently delivered as an address by Mr. Vanderlip in New York.

would find a way to deal with piratical acts in the business field without, in doing that, putting restraint on all enterprise and initiative and a clog upon all progress. He would see that the transportation systems of the country were brought up to the highest state of efficiency, but in demanding efficiency he would also recognize that these transportation systems serve every other industry, and that reasonable profits for the transportation lines is the truest economy for all interests. He would recognize some of the great lessons that this war has taught, one of the most important of which is the tremendous efficiency that an industrial machine can attain if there is a unity in its direction. Lacking a benevolent despot, a wise and patriotic Congress and political administration could do all that.

We have a motto in this country, holding that, "United we stand; divided we fall." That is just as true in industrial and commercial affairs as in political life. The efforts that have been made to enforce competition have been without any care for the economic effect resulting; without any regard for the increased costs. Lawmakers in seeking to cure unfair practises, which form but a fraction of a per cent of the total business, have hampered all business in a most costly manner. We have paid a tax to this theory of enforced competition that might almost be compared to the cost to some of the belligerent nations of the war, and that tax has been laid upon all of us.

No consumer of goods can escape it and people of small incomes suffer most from it. Increased pay affords no relief to the wage-earning people from the burdens of wasteful production, for every increase in wages means an increase in living costs to the entire population. The only way to better the condition of the millions is by more effectually organizing the forces of production, so that the output may be increased.

This benevolent despot, whom I have been picturing as controlling our destinies for a time, could give to our business life a security that would attract the idle capital of the country to the work of more thoroly organizing, perfecting and developing the existing manufacturing establishments. He would see to it that industry adopted policies toward the working forces of the country calculated to draw from them their most willing, interested and helpful cooperation.

He would instil into every employer and wage earner alike the importance at this time of establishing the industries of this country upon an unassailable basis of efficiency and low costs. He would encourage the employer to supply the best possible tools that capital can provide, and the best organization that management can devise; he would call for such a fair division with labor that workmen would give the best energy and skill at their command to accomplish the desired end of efficiency and low costs. He would keep our heads level and hold us down to real work. He would show us that prosperity is to be found, not in the deceptive profits of the stock market, not in higher prices for the things we buy and sell to each other, not in higher wages that must in turn be offset by higher prices, but in a greater production of goods at a low cost, leading to a broader, surer position in the world's markets.

OUR OPPORTUNITY

There is capital available in this country to inaugurate enterprises that will employ every man in the country without a dollar's worth of war business.

We scarcely comprehend our own wealth.

If Great Britain and Germany can each raise approximately $6,000,000,000 in fifteen months for war purposes, what could the United States do for industry, for its own progress, and to support the progress of the world in this time of universal calamity, if a spirit of unity and high purpose could direct its action?

This is the richest country in the world in liquid wealth, and in equipment for the production of everything the world wants, either in war or in peace.

It has the instinct and experience of growth.

We know how to expand.

There is no royal and easy road to placing this country, its industry and its commerce, in the commanding position that is waiting for it.

There never was given to a people such opportunities as exist for the United States today.

What we make of these opportunities lies in no hands but our own.

The position, the prosperity, the influence of the United States for the next twenty-five years will be tremendously affected, and, indeed, almost determined, by the course we take in the next twenty-five months.

It is up to us.

The whole world is looking expectantly to the United States. This is the richest country in the world in liquid wealth, and in equipment for the production of everything the world wants, either in war or in peace. It has the instinct and experience of growth. We know how to expand. Our industries have practically doubled their output in ten years. And now we are the only great industrial nation at peace, and able to give our energies to production and to building-up, while the rest of the world is wasting and tearing down. There ought not to be an idle man in the United States for years to come, and if we could put ourselves under a wise and benevolent despot, or, in other words, if we could have a good organization and a good understanding with ourselves, and work to a common purpose, there would not be one.

The war has brought the world to a standstill, and for the time we are the only country that can contribute to its progress. From every quarter appeals come up to the United States for help. It is a new position and a new experience for us. We have been supplicants ourselves in the past, and we ought to know from our own history what an opportunity the undeveloped countries now offer to us. What would we be today if we had never had foreign capital to help us?

Our neighbors, the other countries of the Americas, have great stores of natural wealth and raw materials, which our factories can use, and they need capital, not in the form of money, but in the form of railways, warehouses, machinery and supplies of every kind, the making of which would help to keep our factories busy for years to come.

While a wise and benevolent despot might do some of the things I have outlined, and much more, we cannot have a wise and benevolent despot, and, for reasons much more important than any material prosperity, we do not want one.

What we could have, however, and what would accomplish all these things better than the wisdom and the benevolence of any human being would be wisdom and benevolence in the direction of our political affairs and in the conduct of our industrial and commercial life.

All this means that there is no royal and easy road to placing this country, its industry and its commerce, in the commanding position that is waiting for it. That road lies only along the path of individual wisdom, individual cooperation and high-minded conduct. That does not mean on the part of somebody else;

it means on the part of each one of us.

In whatever measure we individually will be ruled by the high motives, the foresight, and the wisdom that we would hope for in an ideal, benevolent despot, in that measure we will have contributed to this country's progress and to the preëminence and solidity of its commerce and industry. In the measure in which we are narrow, selfish, individualistic, in the measure in which we are satisfied with immediate profits, and work neither for fair division with labor which we employ, nor toward fair relations with our competitors; in the measure in which we are lacking both in moral fibre in the conduct of our own business, and in sagacious statesmanship in our contribution to the political life of the nation, in that measure will we hold back and misdirect the future.

I believe there never was given to a people such opportunities as exist for the United States today. What we make of these opportunities lies in no hands but our own.

If the full responsibility of all this can be borne into the minds of men who are directing large affairs, and who, because of their position, not only contribute to shaping our industrial life, but also to the quality of our political thought; if the true responsibility of citizenship can be brought home to them, we will not need benevolent despots.

But remember that a very small part of the responsibilities of citizenship lie in how we vote at the polls. The responsibilities lie 'way back of that. They demand that we act in our own business life in such a way that a political majority may not be misled, because of an occasional transgression in business life, to put shackles on all business.

The position, the prosperity, the influence of the United States for the next 25 years, will be tremendously affected and, indeed, almost determined, by the course we take in the next 25 months. To an unusual degree there will flow from the political, business and individual decisions that we make in the next two years, consequences that will for many more years affect our destiny. Seldom, if ever, were there needed in our political councils calmer minds, more far-seeing statesmanship, more practical grasping of the essence of business life. In the conduct of business there has seldom, if ever before, been greater need for broad vision, for a fresh imagination that will deal soundly and effectively with new opportunities of vast import.

The war is not going to prove a total loss to the industry of Europe. Some fundamental lessons of great importance have been learned. The efficiency of a central direction that has come to be little less than a vast experiment of state socialism is being tried and the least that will come of that will be important lessons in cooperation and unity. Why should we not learn some of those lessons without paying the awful tax that has come with them to the belligerent nations? Why should we not come to see that a unity of purpose in our industrial life will be needed to meet the competition of the future, and that whatever contributes to effective industrial organization, to cheap production, to elimination of waste, will eventually work to the good of all the people? It is up to us. We as a people will get out of the future what we prove worthy of getting. I believe a nation never had such opportunity for service to the world, to mankind, to its own people, and for a service that will be accompanied by benefits and rewards to all. If there are misfortunes ahead of us, they will be of our own making. That there are tremendous opportunities ahead of us if we are equal to grasping them and equal to discharging the responsibilities that go with them there can be no doubt.

New York City

THE ARRIVAL OF PROSPERITY

ROGER W. BABSON—World supremacy has been laid at our door.

SYDNEY BROOKS—New York is reeling, crazy drunk with money.

JAMES J. HILL—The Northwest will enjoy good business during the winter.

PAUL M. WARBURG—With rapid strides we are approaching the position of world bankers.

FEDERAL RESERVE BOARD—Business conditions thruout the country show improvement for November.

JOSEPH H. CHOATE—The United States is one of the richest and most hated nations in the world.

BROOKLYN EAGLE—Postal savings deposits in Brooklyn this year show an increase of nearly 100 per cent.

UNITED FRUIT COMPANY—Net earnings of $7,470,042 in the year ended September 30, against $3,508,993 in 1914.

SECRETARY NIEMOELLER, ASSOCIATE RETAILERS, ST. LOUIS—Retail business in St. Louis is better now than ever before.

PRESIDENT WILLARD—This October was the best month in the eighty-eight years of the Baltimore & Ohio Company's existence.

ROCKY MOUNTAIN NEWS—Colorado is prosperous and every workingman in the state is sharing in the general prosperity.

SECRETARY GITCHELL, DETROIT BOARD OF COMMERCE—Detroit's business situation is far better than ever before at this time of year.

PROVIDENCE JOURNAL—Further evidence of the return of normal conditions in general business is given by the report of orders for 34,100 freight cars in a single month.

JOHN H. PATTERSON, DAYTON, OHIO—The approaching era of prosperity will probably exceed anything this country has ever known.

PRESIDENT PARK, CHAMBER OF COMMERCE, RALEIGH, NORTH CAROLINA—A great wave of prosperity is sweeping over this section.

POSTMASTER GENERAL BURLESON—Postal receipts contain important evidence of healthy and well distributed prosperity in the country.

SECRETARY CLEVELAND, MEMPHIS ASSOCIATION OF CREDITMEN—Collections are better than in several years and there are fewer failures.

PRESIDENT HANNAFORD—The Northern Pacific in November moved about 20,000 more cars of freight than in the same month a year ago.

U. S. BUREAU OF COMMERCE—American export trade with almost the entire world has grown, only one country, Japan, showing a slight decrease.

WEATHERFORD, TEXAS, HERALD—With steer yearlings selling in west Texas at around $43, it is evident that prosperity has come to the cattle men of the state.

FRANCIS M. HUGO, NEW YORK SECRETARY OF STATE—Over 70,000 more automobiles have been registered in my office so far this year than in the same period of 1914.

SECRETARY GLENDENNING, KANSAS CITY COMMERCIAL CLUB—The crops and increased outputs of mines and factories have left a profit in Kansas City trade territory which will make the Christmas shopping season the most prosperous known in many years.

TACOMA DAILY NEWS—Straws in the wind of returning prosperity are seen in the accumulating reports of increased railroad earnings.

FINANCIAL CHRONICLE—Checks for $4,986,000,000 passed thru the country's clearing houses in the week ended December 4, and there never was a week like that before.

PHILADELPHIA PUBLIC LEDGER—So great is the demand from firms wanting new vessels that more business is being refused than accepted by the Delaware River shipyards.

SECRETARY MAGEHEE, ATLANTA RETAIL MERCHANTS' ASSOCIATION—Atlanta stores have laid in larger stocks that usual and early Christmas trade is justifying these preparations.

LEON SIMON, GULF COAST DIRECTOR, U. S. CHAMBER OF COMMERCE—Reports from wholesale merchants show increases in their November business of from 50 to 100 per cent.

MINNEAPOLIS JOURNAL—Building in Minneapolis the current year has been without much of the speculative spirit, and yet the record will surpass that of any other year in the city's history.

U. S. DEPARTMENT OF AGRICULTURE—The nation's principal farm crops this year are worth about $5,500,000,000, exceeding by more than $500,000,000 their value in 1914, the previous banner year.

SECRETARY MCADOO—There is certain to be a treasury surplus of $57,644,605 at the close of the present fiscal year, June 30, 1916, and if the duty is retained on sugar and the special war revenue law is continued, there will be a surplus of $101,644,605.

Mr. Pickwick's Christmas Revels

By Charles Dickens

THE best sitting room at Manor Farm was a good, long, dark-panelled room with a high chimney-piece, and a capacious chimney, up which you could have driven one of the new patent cabs, wheels and all. At the upper end of the room, seated in a shady bower of holly and evergreens, were the two best fiddlers, and the only harp, in all Muggleton. In all sorts of recesses, and on all kinds of brackets, stood massive old silver candlesticks with four branches each. The carpet was up, the candles burnt bright, the fire blazed and crackled on the hearth, and merry voices and light-hearted laughter rang through the room. If any of the old English yeomen had turned into fairies when they died, it was just the place in which they would have held their revels.

If anything could have added to the interest of this agreeable scene, it would have been the remarkable fact of Mr. Pickwick's appearing without his gaiters, for the first time within the memory of his oldest friends.

"You mean to dance?" said Wardle.

"Of course I do," replied Mr. Pickwick. "Don't you see I am dressed for the purpose?" Mr. Pickwick called attention to his speckled silk stockings, and smartly-tied pumps.

"*You* in silk stockings!" exclaimed Mr. Tupman jocosely.

"And why not, sir—why not?" said Mr. Pickwick, turning warmly upon him.

"Oh, of course there is no reason why you shouldn't wear them," responded Mr. Tupman.

"I imagine not, sir; I imagine not," said Mr. Pickwick in a very peremptory tone.

Mr. Tupman had contemplated a laugh, but he found it was a serious matter; so he looked grave, and said they were a pretty pattern.

"I hope they are," said Mr. Pickwick, fixing his eyes upon his friend. "You see nothing extraordinary in the stockings *as* stockings, I trust, sir?"

"Certainly not. Oh, certainly not," replied Mr. Tupman. He walked away; and Mr. Pickwick's countenance resumed its customary benign expression.

"We are all ready, I believe," said Mr. Pickwick, who was stationed with the old lady at the top of the dance, and had already made four false starts, in his excessive anxiety to commence.

"Then begin at once," said Wardle. "Now!"

Up struck the two fiddles and the one harp, and off went Mr. Pickwick into hands across, when there was a general clapping of hands, and a cry of "Stop, stop!"

"What's the matter?" said Mr. Pickwick, who was only brought to, by the fiddles and harp desisting, and could have been stopped by no other earthly power, if the house had been on fire.

"Where's Arabella Allen?" cried a dozen voices.

"And Winkle?" added Mr. Tupman.

"Here we are!" exclaimed that gentleman, emerging with his pretty companion from the corner; as he did so, it would have been hard to tell which was the redder in the face, he or the young lady with the black eyes.

"What an extraordinary thing it is, Winkle," said Mr. Pickwick, rather pettishly, "that you couldn't have taken your place before."

"Not at all extraordinary," said Mr. Winkle.

"Well," said Mr. Pickwick, with a very expressive smile, as his eyes rested on Arabella, "well, I don't know that it *was* extraordinary, either, after all."

However, there was no time to think more about the matter, for the fiddles and harp began in real earnest. Away went Mr. Pickwick—hands across—down the middle to the very end of the room, and half way up the chimney, back again to the door—poussette everywhere—loud stamp on the ground—ready for the next couple—off again—all the figure over once more—another stamp to beat out the time—next couple, and the next, and the next again—never was such going! At last, after they had reached the bottom of the dance, and full fourteen couple after the old lady had retired in an exhausted state, and the clergyman's wife had been substituted in her stead, did that gentleman, when there was no demand whatever on his exertions, keep perpetually dancing in his place, to keep time to the music; smiling on his partner all the while with a blandness of demeanor which baffles all description.

. . . .

Old Wardle led the way to a pretty large sheet of ice; and the fat boy and Mr. Weller having shoveled and swept away the snow which had fallen on it during the night, Mr. Bob Sawyer adjusted his skates with a dexterity which to Mr. Winkle was perfectly marvellous, and described circles with his left leg, and cut figures of eight, and inscribed upon the ice, without once stopping for breath, a great many other pleasant and astonishing devices, to the excessive satisfaction of Mr. Pickwick, Mr. Tupman, and the ladies; which reached a pitch of positive enthusiasm when old Wardle and Benjamin Allen, assisted by the aforesaid Bob Sawyer, performed some mystic evolutions, which they called a reel.

. . . .

Mr. Weller and the fat boy, having by their joint endeavours cut out a slide, were exercising themselves thereupon, in a very masterly and brilliant manner. Sam Weller, in particular, was displaying that beautiful feat of fancy sliding which is currently denominated "knocking at the cobbler's door," and which is achieved by skimming over the ice on one foot, and occasionally giving a postman's knock upon it with the other. It was a good long slide, and there was something in the motion which Mr. Pickwick, who was very cold with standing still, could not help envying.

"It looks a nice, warm exercise that, doesn't it?" he inquired of Wardle, when that gentleman was thoroughly out of breath by reason of the indefatigable manner in which he had converted his legs into a

WENT SLOWLY AND GRAVELY DOWN THE SLIDE WITH HIS FEET ABOUT A YARD AND A QUARTER APART

Drawings by Thomas Nast, from Harper & Brothers' 1874 Edition

a pair of compasses, and drawn complicated problems on the ice.

"Ah, it does, indeed," replied Wardle. "Do you slide?"

"I used to do so, on the gutters, when I was a boy," replied Mr. Pickwick.

"Try it now," said Wardle.

"Oh, do, please, Mr. Pickwick!" cried all the ladies.

"I should be very happy to afford you any amusement," replied Mr. Pickwick, "but I haven't done such a thing these thirty years."

"Pooh! pooh! nonsense!" said Wardle, dragging off his skates with the impetuosity which characterized all his proceedings. "Here; I'll keep you company; come along!" And away went the good tempered old fellow down the slide, with a rapidity which came very close upon Mr. Weller, and beat the fat boy all to nothing.

A LARGE MASS OF ICE DISAPPEARED

Mr. Pickwick paused, considered, pulled off his gloves and put them in his hat: took two or three short runs, balked himself as often, and at last took another run, and went slowly and gravely down the slide, with his feet about a yard and a quarter apart, midst the gratified shouts of all the spectators.

"Keep the pot a bilin', sir!" said Sam; and down went Wardle again, and then Mr. Pickwick, and then Sam, and then Mr. Winkle, and then Mr. Bob Sawyer, and then the fat boy, and then Mr. Snodgrass, following closely upon each other's heels, and running after each other with as much eagerness as if all their future prospects in life depended on their expedition.

It was the most intensely interesting thing, to observe the manner in which Mr. Pickwick performed his share in the ceremony; to watch the torture of anxiety with which he viewed the person behind, gaining upon him at the imminent hazard of tripping him up; to see him gradually expend the painful force he had put on at first, and turn slowly round on the slide, with his face toward the point from which he had started; to contemplate the playful smile which mantled on his face when he had accomplished the distance, and the eagerness with which he turned round when he had done so, and ran after his predecessor: his black gaiters tripping pleasantly through the snow, and his eyes beaming cheerfulness and gladness through his spectacles. And when he was knocked down (which happened upon the average every third round), it was the most invigorating sight that can possibly be imagined, to behold him gather up his hat, gloves and handkerchief, with a glowing countenance, and resume his station in the rank, with an ardor and enthusiasm that nothing could abate.

The sport was at its height, the sliding was at the quickest, the laughter was at the loudest, when a sharp, smart crack was heard. There was a quick rush toward the bank, a wild scream from the ladies, and a shout from Mr. Tupman. A large mass of ice disappeared; the water bubbled up over it; Mr. Pickwick's hat, gloves, and handkerchief were floating on the surface; and this was all of Mr. Pickwick that anybody could see.

Dismay and anguish were depicted on every countenance, the males turned pale, and the females fainted. Mr. Snodgrass and Mr. Winkle grasped each other by the hand, and gazed at the spot where their leader had gone down, with frenzied eagerness; while Mr. Tupman, by way of rendering the promptest assistance, and at the same time conveying to any persons who might be within hearing, the clearest possible notion of the catastrophe, ran off across the country at his utmost speed, screaming "Help!" with all his might.

It was at this moment, when old Wardle and Sam Weller were approaching the hole with cautious steps, and Mr. Benjamin Allen was holding a hurried consultation with Mr. Bob Sawyer on the advisability of bleeding the company generally as an antidote against any little bit of professional practice—it was at this very moment, that a face, head and shoulders, emerged from beneath the waters and disclosed the features and spectacles of Mr. Pickwick. "Keep yourself up for an instant—for only one instant!" bawled Mr. Snodgrass.

"Yes, do; let me implore you—for my sake!" roared Mr. Winkle, deeply affected. The adjuration was rather unnecessary; the probability being, that if Mr. Pickwick had declined to keep himself up for anybody else's sake, it would have occurred to him that he might as well do so for his own.

"Do you feel the bottom there, old fellow?" said Wardle.

"Yes, certainly," replied Mr. Pickwick, wringing the water from his head and face, and gasping for breath. "I fell upon my back. I couldn't get on my feet at first."

The clay upon so much of Mr. Pickwick's coat as was yet visible bore testimony to the accuracy of this statement; and as the fears of the spectators were still further relieved by the fat boy's suddenly recollecting that the water was nowhere more than five feet deep, prodigies of valor were performed to get him out. After a vast quantity of splashing, and cracking, and struggling, Mr. Pickwick was at length fairly extricated from his unpleasant position, and once more stood on dry land.

"Oh, he'll catch his death of cold," said Emily.

"Dear old thing!" said Arabella. "Let me wrap this shawl around you, Mr. Pickwick."

"Ah, that's the best thing you can do," said Wardle; "and when you've got it on, run home as fast as your legs can carry you, and jump into bed directly."

A dozen shawls were offered on the instant. Three or four of the thickest having been selected, Mr. Pickwick was wrapped up, and started off, under the guidance of Mr. Weller, presenting the singular phenomenon of an elderly gentleman, dripping wet, and without a hat, with his arms bound down to his sides skimming over the ground, without any clearly defined purpose, at the rate of six good English miles an hour.

But Mr. Pickwick cared not for appearances in such an extreme case, and urged on by Sam Weller, he kept at the very top of his speed until he reached the door of Manor Farm, where Mr. Tupman had arrived some five minutes before, and had frightened the old lady into palpitations of the heart by impressing her with the unalterable conviction that the kitchen chimney was on fire—a calamity which always presented itself in glowing colors to the old lady's mind when anybody about her evinced the smallest agitation.

Mr. Pickwick paused not an instant until he was snug in bed. Sam Weller lighted a blazing fire in the room, and took up his dinner; a bowl of punch was carried up afterwards, and a grand carouse held in honor of his safety. Old Wardle would not hear of his rising, so they made the bed the chair, and Mr. Pickwick presided.

THE WORLD OVER

Music from Light

Now that the attention of the public has been drawn to the use of the incandescent lamp, not only as a receiver in transcontinental wireless telephony, but as a generator of power necessary to transmit the voice in the first place it may be interesting to know that this incandescent lamp or audion has another entirely different field of utility—that of producing sound or music.

Tradition has it that on the plains of Egypt, three thousand years ago, the giant statue of the Memni emitted weirdly beautiful notes when struck by the first rays of the rising sun. Today, after three thousand years, it is interesting to know that we have at last reached the point of transmuting light rays directly into sound rays.

In Dr. Lee de Forest's laboratory there are a number of small spherical incandescent bulbs, from which can be obtained a succession of musical notes, clear and sweet, of surprizing volume, the pitch and timbre of which can be varied almost at will to imitate any musical tone of an orchestra.

During the work on the experiments in developing the audion as a wireless telephone detector and incidentally as an amplifier to be used on long distance telephone lines, the discovery was made that when the circuits of the audion were connected in a certain way, a clear musical note was heard in the telephone receiver, which was connected in one of these circuits. The pitch of the notes is very easily regulated by changing the capacity or the inductance in the circuits.

A scale has been arranged similar in function to that of an organ, with switches in place of the ordinary keys, so that by pressing certain keys the operator can cut out, or in, more or less inductance or resistance, thus changing the notes emitted from the telephone receiver at will.

In order to bring out the volume of sound fully it was necessary to connect a number of loud speaking horns connected with telephone receivers similar to those which you have sometimes heard in the central railroad stations as train announcers.

In its simplest form, used as a detector for wireless signals, the audion is a small incandescent lamp about 1½ inches in diameter, containing, besides the usual filament, a grid-shaped wire and behind that again a small rectangular plate of nickel, these elements being sealed inside the glass bulb, together with the filament. This bulb is perfectly insensitive until the filament is brightly lighted, whereupon it becomes, in connection with the aerial wire of any wireless receiving station, a detector of extraordinary sensitiveness.

So sensitive is this audion detector nowadays, that Dr. Austin, of the Bureau of Standards, Washington, D. C., has recently announced that it brings in the signals from the big navy station at Colon, Isthmus of Panama, 20,000 times audibility. The recent work of telephoning from Arlington to Honolulu was made possible by the use of the audion detector or amplifier at the receiving station.

Now, this same little bulb can be made to actually generate alternating current. It receives the energy which is expended in these currents from the dry battery or dynamo. The audion is in other words a transformer of energy. The alternating current, if of low frequency, can actuate the telephone diaphragm and make musical notes which the ear can hear, and this is the idea involved in the musical instrument.

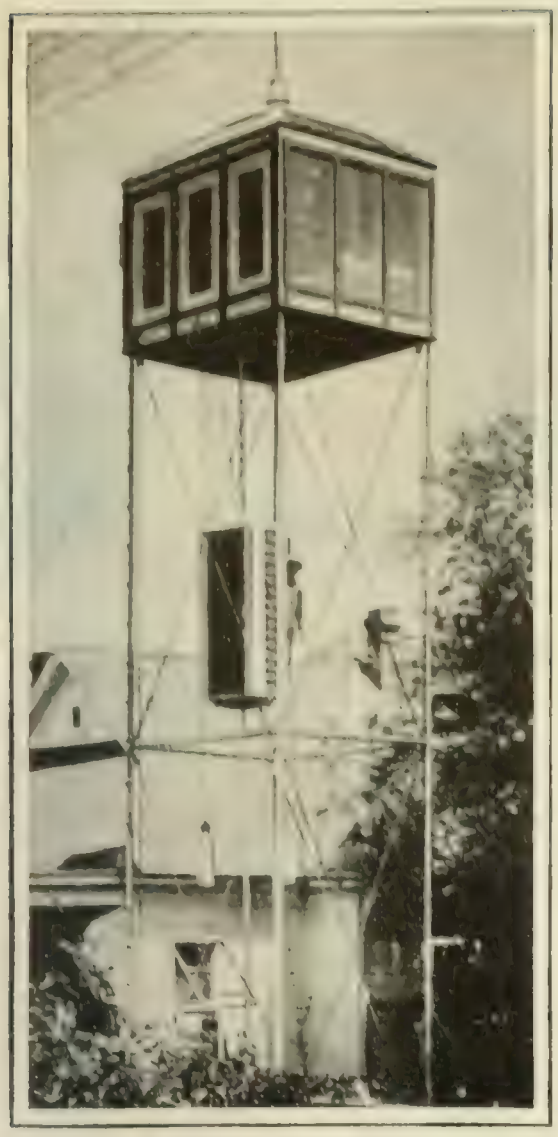
THE YOLANDO II

A Queer South American Boat

"Skimming lightly over the water" is a trite description used of many a boat. It suggests a rather pretty picture—"like a bird" is the qualification it usually carries. But the boat that comes nearest to fitting that familiar phrase is a queer looking craft indeed—built not at all for beauty—not even for speed—but literally to skim over the water. The "Yolando II" is its name. It has a draught of only three inches.

Gonzalo Mejia, the builder, has the contract for carrying the mails in Colombia, South America. He found that, on account of the shallowness of the water, it was sometimes taking sixty days to make the journey up the Magdalena River, which during the dry season is often less than a foot deep. So he devised the "Yolando II," and expects to reduce the trip from two months to twenty hours.



The boat is run by high powered engines developing 150 horsepower, and is equipt with two aeroplane propellers.

The Sacred Throne of China

China has changed its government, but the sacred throne room of the Son of Heaven is left untouched. The new republicanism halts at its door. Up to the time of the death of the old Dowager Empress, few foreigners had ever crost its threshold and not many have entered since.

There was looting in the Palace during the Siege of Peking, but the soldiers did not reach the outer portals of the sacred room. There are doors within doors like those of an old Shinto shrine.

As might be expected, the throne of a long line of heavenly sons is enriched with every device known to the ancient arts of the Empire. Lacquer, bronze and porcelain, carved, wrought and decorated with a cunning beyond

A NOVEL BEDROOM

the skill of any modern artists, make a background so dazzling that only the coronation robes of a Chinese Emperor could hold their own against it. Imagination adds the vivid and kaleidoscopic picture of a coronation party in gold embroideries and rich brocades.

Old, old are the iron lanterns that light the throne. The bronze urns upheld by gold elephants had been made for centuries when Columbus set out to find a short cut to East India. Even Chinese tradition places no dates on the panels of the lacquer screen. Every line of embellishment is symbolic.

Grim tales the old throne room might reveal—and may some time. When all the living Chinese diplomats have been sleeping for a few hundred years and when future historians can view the Dowager Empress with the same perspective that we now turn upon Queen Elizabeth—then the inner history of the sacred room perhaps will be written. And it will be worth coming back to this old earth to read.

A Castle in the Air

The city engineer of a small town in California, who desired to sleep in better air than the usual sultry bedroom, hit upon the ingenious scheme of building an elevated sleeping apartment, far enough above the ground so that there would be a noticeable change in the temperature and the purity of the air. The result of his efforts is veritably a nest in an iron tree. He erected four stout iron pipes, braced them securely and built a comfortable sleeping room at the top. The distance between the ground and his bedroom floor is nearly forty feet, and it is safe in all weather. Its builder estimates that it will withstand a two hundred miles-an-hour hurricane.

Aside from the idea itself, probably the most unique feature is the means for reaching the lofty sleeping room. A small, box-like elevator, guided by a two-inch galvanized iron pipe, is lifted by the strength of a one-sixth horsepower electric motor. There are screens at two ends of the house, so that the ventilation nearly approaches that to be had by sleeping in the open on a hill top.

THE GERMAN GOVERNMENT'S PERMISSION TO BUY MILK

A Municipal Milk-Ticket

In the first part of the war a large part of the cattle of Germany were killed to save fodder during the winter. This has caused a shortage of milk this year; so in order to see that all the babies got their proper share monthly milk-tickets were issued. The one reproduced on this page is issued by the Berlin suburb of Neukölln and entitles the holder to purchase every day from the dairy of J. Smidt's Sons a liter of milk at a cost of 28 pfennigs, about eight cents a quart.

A Cent's Worth of Electricity

One cent's worth of electricity will make four cups of coffee, or cook a steak, or boil two quarts of water, or make a Welsh rarebit, or operate a seven-inch frying-pan for twelve minutes, or an electric griddle for six minutes, or run a sewing-machine for three hours, or an electric flat-iron for fifteen minutes, or a luminous radiator for eight minutes, or a heating-pad for two hours, or a foot-warmer for fifteen minutes, or a massage machine for four hours, or a curling iron once a day for two weeks, or a dentist's drill for an hour and a half, or an electric piano-player for an hour, or vulcanize a patch on an automobile tire, or keep a big glue-pot hot for an hour, or brand electrically one hundred and fifty hams, or raise a passenger elevator five stories a minute, or raise two hundred and fifty gallons of water one hundred feet high, or raise ten tons twelve feet high in one minute.

Farthest South

Ushuaia is the most southerly town in the world; it lies in latitude 55 south, and is only seventy miles from Cape Horn. As the capital of that part of Tierra del Fuego which belongs to the Argentine Republic, it prides itself on being the residence of the Governor, and on possessing a wireless station, a fishing and canning company, several stores, a church and one hotel. It is also the penal settlement of Argentina; in the large building at the back of the town there are over 1000 men imprisoned for terms varying from five years to a lifetime.

Mount Olivia, which is 4600 feet high and the highest mountain in the island, overlooks the town; it is never entirely free of snow. For eight months in the year a hard sheet of ice covers the ground, on which the only vehicles to be seen are sleighs.

THE NEW BOOKS

THE SPELL OF GREED

In the great revival of nationalist literatures like the Irish and the Welsh, the work of David Pinski in the racial interpretation of the Jews is deserving of more than passing attention. Aside from the literary standpoint even, *The Treasure*, his first play to be translated from the Yiddish into English, ranks high in dramatic quality, as is attested by its production in Berlin by Max Reinhardt, where it was acclaimed by no less a critic than Prof. Paul Schlenther. Harsh and bitter as is Pinski's study of first a family and then a whole village in the Russian pale, as it falls under the spell of greed for the mythical treasure found by the daughter of a gravedigger, there is more in it than the merely ethnic, the merely national. There is a deeper truth, reflecting man's continual struggle for earthly possessions in order to gain freedom and flexibility for life. The touch of romance added in the longing of the dowerless Jewish girl to escape her lot, and be, if only for a day, the great lady, lends an additional charm.

Admirably translated by Ludwig Lewisohn, *The Treasure* is a play that might well be staged in our spreading "little theaters," that are doing so much to revivify an ancient art.

The Treasure, by David Pinski. Huebsch. $1.

RESPONSIBLE CITIZENSHIP

The relationship of the individual to government has been a most valuable index of human life. The increase of the proportion of mankind to be included in Aristotle's class "political animal" is seen, both by advocates and opponents, to center in the possibilities and effects of responsibility.

The New Citizenship, by Percy MacKaye, is the most definite evidence we have that the public recognition of entrance into citizenship is approaching the field of art. The persons in the ceremony include among many others Washington, Jefferson, Lincoln and Wilson, whose most impressive words join with the folk dances, hymns and other life products of immigrants in a conscious effort to bring the sixth of our population not yet Americanized into the melting pot.

But with its hospitable inclusiveness the state must recognize responsibility for new standards of fitness. Dr. Goddard's pioneer work in feeble mindedness takes on new significance in *The Criminal Imbecile*, a record of three murder trials in which tests of weakness of mind establish a new standard in criminal procedure. The right of the segregated to healthful occupation and "the pursuit of happiness" has its influence in opening avenues of industrial occupation to others whose lives are fractional. *The Work of Our Hands*, by H. J. Hall, tells of productive occupation for invalids and cripples according to their ability to work, whether less than an hour or eight hours a day. There are many suggestions here of the possibilities of the "work cure" as a means of keeping one's numerator up to par.

Dr. Steiner, in *Introducing the American Spirit*, personally conducts the skeptical Herr Director and the Frau Directorin thru New York City, Lake Mohonk, Chicago, the Mormon country and other representative sections of America in an effort to interpret to them the Spirit of America. The established citizen, as well, will find an enlargement of his own American spirit in these skilfully organized studies of the meaning of our life. C. S. Cooper's *American Ideals*, perhaps not intentionally, shows us the more adolescent and rhetorical America to which we so easily shut our eyes. The Open Forum Movement has had a most striking demonstration in Ford Hall at Boston. *Democracy in the Making*, by G. W. Cole, is the account of its work. What has been accomplished in ten years is uniquely shown in section three, where brief sketches are given of sixteen representative "Ford Hall Folks."

The New Citizenship, a Civic Ritual Devised for Places of Public Meeting in America, by Percy MacKaye. Macmillan. 50 cents. *The Criminal Imbecile*, by Henry Herbert Goddard. Macmillan. $1.50. *The Work of Our Hands*, by H. J. Hall, M.D., and Mertice M. C. Buck. Moffatt, Yard. $1.50. *Introducing the American Spirit*, by Edward A. Steiner. Revell. $1. *American Ideals*, by Clayton Sedgwick Cooper. Doubleday, Page. $1. *Democracy in the Making—Ford Hall and the Open Forum Movement*, George W. Coleman, ed. Boston: Little, Brown. $1.50.

TO READ ALOUD

If one wishes to know what a flight in an airship over a battle line is like, let him read the first of Donn Byrne's *Stories Without Women*. Then he will need no urging to those that follow.

Hearst. $1.25.

English society stories mostly, meant to be ironic and just amusing and succeeding pretty well, fill *Off Sandy Hook*, by Richard Dehan.

Stokes. $1.25.

The Book of Wonder, by Lord Dusany, reprints bewildering grown-up nonsense tales from *The Sketch* and *The Saturday Review*.

Boston: Luce.

Scally, by Ian Hay, is English too, with a curate, an admirable instead of a timid one, and a nondescript dog remarkable for size and amiability, as main characters.

Houghton, Mifflin. 75 cents.

The real England of today is the theme of three delicately handled stories by H. Fielding-Hale in *The Field of Honour*, but the tale of the French bell-ringer is as good as that of the old English soldier.

Houghton, Mifflin. $1.50.

What a pity Mary Raymond Shipman Andrews could not let the fine idea of *The Three Things* lie long enough to ripen and gather form and lose some superfluous sentiment so that it might the better have stood beside her other deservedly popular little stories.

Boston: Little, Brown. 50 cents.

New England as the story tellers' mine is not quite worked out and Dorothy Donnell Calhoun has found some pleasant and characteristic and amusing people and incidents to record in *Blue Gentian Folk*.

Abingdon Press. 75 cents.

Blessed be the writer who can make men laugh. Men certainly do laugh over *Speaking of Operations* by Irvin S. Cobb. Women laugh too, but less unrestrainedly. Thus is evidently a man's story.

Doran. 50 cents.

Elizabeth Woodbridge's humor is quieter, but there is very excellent humor to be found in the "simple life" described in *More Jonathon Papers*, and there is charm in the out-of-door world in which the writer and the fisherman spend their holidays.

Houghton, Mifflin. $1.25.

BUILDING A HOUSE

Harold Donaldson Eberlein has made an admirable book in *The Architecture of Colonial America*. He considers the early Dutch and Swedish types; the English of New England and of the South; the Georgian; the classic revival; the church buildings, with some account of materials and of the early architects. Many of the excellent photographs with which the book is very fully illustrated were taken by Mary A. Northend, whose *Remodeled Farm Houses* with its pictures of "before and after" are warranted to tempt any reader to the purchase of a few gray shingles and a fireplace. These farmhouses are all in Massachusetts and all homelike, but one feels that one has stepped suddenly from the home into the palace when one opens Porter Garnett's *Stately Homes of California*. Perhaps these magnificent residences are yet too new to fit into the landscape or look used or usable. The color prints from the *Sunset Magazine*, however, are attractive.

Architecture of Colonial America, by Harold Donaldson Eberlein. $4.50. *Remodeled Farm Houses*, by Mary A. Northend. $2. *Stately Homes of California*, by Porter Garnett. $5. Boston: Little, Brown.

PEACE AT ANY PRICE

In her new book, the only likeness to the Zona Gale the public knows is the title, *Heart's Kindred*. It opens with realistic scenes in a miner's hut and the saloon of a western town where bloodletting, both of animals and men, seems a bit exaggerated till one realizes that one is reading not a novel but a tract. The reader suspects this on finding himself in the midst of a Chicago mass meeting called to avert our entering the war, and is sure of it when, hustled on with the characters to Washington, he attends the Woman's Peace Meeting

Cadillac
Standard of the World

Prove the Cadillac to yourself; then ask—
"Where is there another such Motor Car?"

DISMISS from your mind, for the moment, the new charms which the Cadillac eight-cylinder engine has contributed to motoring.

Dismiss from your mind its wonderful smoothness—its swift acceleration—its remarkable flexibility—its marvelous activity—its unusual hill-climbing powers—its incomparable roadability—its superb luxury.

When you have dismissed these, then direct your thoughts in other channels—toward other factors which may make or unmake your physical comfort and your mental ease.

First, simply sit in the Cadillac.

Observe the depth of upholstery—how you recline in the seats as you do in your favorite arm chair at home. Your position is one of rest and repose.

Then ride in the Cadillac—and ride in other cars which aspire to share its prestige.

But be not content with merely riding.

Sit behind the wheel and ***drive*** the Cadillac yourself.

Then ***drive*** other cars.

Then drive the Cadillac ***again.***

Do not confine your comparisons to short drives over smooth roads.

Take the bad roads—the worse the better.

Drive through sand and mud, hard roads and soft roads, up hill and down dale.

Observe, first, how much more softly the Cadillac clutch engages and how much more smoothly the car glides into motion.

Observe how much more easily you release the clutch, how much more easily you shift into "second"—then into "high."

Depress the accelerator and observe how much more quickly the Cadillac responds—no hesitation, no "loginess," but an instantaneous "get-away."

You come to a bad stretch of road, with irregular, weaving wheel tracks. Observe how much more easily the Cadillac is controlled—how it holds the road.

Observe how much more easily you turn the corners. No abnormal strength required to guide the car—just a gentle influencing of the steering wheel.

And then, the breaks. Observe how much more easily those of the Cadillac are applied. No straining of the muscles, no delay in the effectiveness—just a gentle pressure of your foot and the brakes are "on"—lightly or firmly as the conditions demand.

Remember, that upon the ease and sureness in handling, the steering and the braking, ***your safety depends***—regardless of whether you drive your own car or employ a chauffeur.

Observe that in the Cadillac, a sense of velvet softness characterizes every motion of the car and every action in its operation.

Observe that after a long drive, you have no feeling of fatigue, but in its place—one of intense exhilaration.

Now, recall the thoughts we asked you to dismiss—the wonderful smoothness—the swift acceleration—the remarkable flexibility—the marvelous activity—the unusual hill climbing powers—the incomparable roadability—the superb luxury.

Add to these the things which you have demonstrated to yourself—the extreme ease of operation and control—the absence of fatigue.

Add to these the Cadillac's reputation for long life, for constant, for enduring and for dependable service.

Then ask yourself:—

"Where is there another such motor car?"

Styles and Prices

Standard Seven passenger car, Five passenger Salon and Roadster, $2080. Three passenger Victoria, $2400. Four passenger Coupe, $2800 Five passenger Brougham, $2950. Seven passenger Limousine, $3450. Berlin, $3600.
Prices include standard equipment, F. O. B. Detroit.

and hears by way of speeches quotations from various women writers. There are two difficulties with such a composition, the first is that writers equal to "Uncle Tom's Cabin" and "Lay Down Your Arms" are more rare than poets. To be effective one's story must grow out of the cause, not be dragged across the continent by the hair of the head in order to meet its topic. The other, in this particular case, is that however dreadful be the killing of men, before men can be persuaded to give up arms as a final resort, they must be shown at least that the teacher of the new way sees the necessity of some forcible settling of essential differences between nations. That it is our business to find this same road to peace now while this horrible slaughter is before our eyes is the solemn belief of all the laborers for international agreement, but the cause is to be forwarded only by a frank admission of all the difficulties. To one facing these "Killin' is killin'" is not a convincing answer.

Heart's Kindred, by Zona Gale. Macmillan. $1.35.

ROYALTY AND BRAINS

Quite apart from the gossipy inanities that make up most court memoirs is the clever and interesting volume of the Infanta Eulalia, the aunt of the King of Spain. Altho primarily an intimate, vivid glimpse of European royalty, and the home life of palace prisoners, it is even more the autobiography of a princess and her fight for the birthright of any free, normal and intelligent human being against caste and etiquet, systems designed to make of royalty nothing but mere figureheads for the state.

The exchange of a palace for a Normandy cottage, of belief in the divinity of kings for belief in the democracy of men, would represent a great mental evolution for any man or woman; how much more for a descendant of the house of Bourbon, who sees "the world waking to the fact that the rule of money is no better than the rule of rank," and who looks forward to the day "when the inequalities of property will have no more authority than the inequalities of rank to oppress mankind." Truly here is a case for the student of heredity and environment!

Valuable as are the Infanta's keen analyses of the Kaiser and the Czar, the fundamentals of whose complex and baffling characters she has come close to striking, equally so are the intelligent and experienced observations of the causes of the present war, and its effect on the questions of armament, democracy, and prohibition in Europe when peace shall be restored.

Court Life from Within, by H. R. H. Infanta Dona Maria Eulalia. Scribner. $3.50.

A CYCLOPEDIA OF MUSIC

Mr. Arthur Elson seems to be as fond as James Russell Lowell pronounced himself to be of the full and descriptive title-page. That of his latest volume, keeping up the tradition of his earlier publications, reads: *The Book of Musical Knowledge: The Ho-*

tory, Technique, and Appreciation of Music, Together with Lives of the Great Composers, For Music Lovers, Students and Teachers. And this epitomizes fairly well the contents of a bulky octavo, constituting a systematic cyclopedia of music designed for popular use and planned with a view to placing before the general reader the main facts that will enable him to appreciate music intelligently. In his biographical and critical accounts of famous music-makers the author follows the beaten paths. There is a well-written and readable sketch of the development of music. Several chapters are devoted to the elucidation of musical form. Several others deal with the various instruments. The author also touches on orchestration, conducting, and acoustics; and with the aid of diagrams in notation tells how to read music. An appendix lists the more important musical terms, and outlines, with bibliographical references, a more extended course of study.

The Book of Musical Knowledge, by Arthur Elson. Houghton, Mifflin. $3.50.

HOW TO START LIFE

To bridge the gap properly between the school and the working life and to launch successfully the youth upon his natural vocation is the problem to be solved by vocational instruction and guidance. Meyer Bloomfield, director of the Vocation Bureau of Boston, contributes some valuable help in solving the difficulties involved in this task in his *Youth, School, and Vocation.* He discusses the waste and inefficiency inherent in the present lack of system, the value of suitable instruction during school life, and the efficacy of well organized vocation bureaus. The example and methods of Germany and England are carefully reviewed and are made to contribute many suggestions and plans.

In a larger volume Dr. Bloomfield has brought together from many sources a number of addresses and papers bearing on various aspects of vocational work. These *Readings in Vocational Guidance* are by such well-known educators and workers as ex-President Eliot, Dean Keppel, Professor Hanus, C. A. Prosser and Dr. Charles R. Richards. Almost every phase of the subject is treated in these two volumes, which make no other claim than to put into our educational and social system the fullest measure of common sense in the interest of efficiency, suitability of life work, and individual happiness.

Youth, School, and Vocation, by Meyer Bloomfield. Houghton, Mifflin. $1.25. *Readings in Vocational Guidance*, Meyer Bloomfield, ed. Ginn. $2.25.

WHAT AILS OUR STAGE?

When it was announced that Prof. T. H. Dickinson, who prepared the useful anthology, "Chief Contemporary Dramatists," was about to issue a new book on the theater, it was our hope that in it he would take a more definite attitude regarding contemporary dramatists. Instead of which he is the author of a treatise on *The Case of*

Resources plus promotion.
For half a century and more—
ever since the first locomotive poked its nose west of the Missouri River—this railroad has worked continuously for the development of the territory which it serves.

This fact is important to every man or woman who contemplates moving to a younger, roomier part of the country. The great advantage of living in a new community lies in the country's growth and the rise of values. The best guarantees of this growth are the region itself—*plus intelligent promotion.*

Nature has attended to the resources of the West and Northwest—the Union Pacific System has helped commercial bodies, state officials and groups of citizens in the quick and solid development of Nebraska, Kansas, Colorado, Wyoming, Utah, Idaho, Oregon and Washington.

Farmers, bankers, merchants—all who live along the line of the Union Pacific System—will tell you that this railroad stands behind them and helps to *guarantee their future.*

American Drama, wherein he attempts to analyze the conditions confronting the theater at the present time, and to show what the theater will be in the future, subject to the demands of social democracy. The book is highly speculative in most of its chapters, altho it does enter into specific discussion of the festival and the pageant as forms likely to satisfy the instincts of the crowd. Professor Dickinson is the first of the younger men interested in the theater today, who has approached the subject in the spirit Lessing approached the State Theater of Germany. It is encouraging to hear a voice clamoring in the wilderness for critical standards in the theater, and tho we believe that Professor Dickinson very often blinds himself to theatrical conditions as they actually are, there is much suggestive material in his analysis of the life stuff out of which he believes American drama of the future is to be evolved. We agree with his point of view that the present theater has suffered because of fictitious values.

Fanny Cannon, the author of *Writing and Selling a Play*, has had practical experience in different phases of theater work, and advises the novice from the standpoint of the commercial manager. She warns the beginner as to the things not to be done, and pleads for a thoro understanding of the technic of the drama before the inexperienced writer attempts the dialog form. Altogether, this is a very practical little manual, which fills an immediate need.

The Case of the American Drama, by T. H. Dickinson. Houghton, Mifflin. $1.50. *Writing and Selling a Play*, by Fanny Cannon. Hoyt. $1.50.

LITTLE FOLKS' RIMES

Sandman Time, by Ilsien Nathalie Gaylord. A half dozen delicate little poems of childhood that should set well to music as lullabies.

Boston: Badger. $

Bears in Mother Goose Land. The text lines are by Hannah Rose, the old by Mother Goose herself, droll pictures of bears and lots of other friendly beasts besides the map of Mother Goose Land are by Frank Vel Beck.

Dorrance. $1.

A Child's Stands Book of Old Verses. A dozen or more favorite verses to be illustrated by pasting in a set of artistic postcard pictures, by Jessie Wilcox Smith, which comes with the book.

Penfield. 50 cents.

FAIRY TALES

Really Truly Fairy Stories, by Helen G. Wheelock, full of the happy, trickery, kindly fairies of rainbows and dreams, and wonders of star and spray and flower, and of Sylvia herself, who knew them all.

Dodge. $1.

The Fox That Wanted Nine Golden Tails, by Kathleen Gray Nelson, is an interesting story of a wonderful fox who dared to do the words with many other wild creatures less foolish than himself.

New York: Frank-Maurice. $1.

Stories Told to Children, by Mildred Fairborn, are an delightful as one would expect from the author of "The Road Mender." From the dreadful Griffin and gentle Fairies Tooloo these are all worth knowing.

Badger. $1.

STORIES FOR GIRLS

Jean Cabot at the House with the Blue Shutters, by Gertrude Fisher Scott, is the last of a popular series, and ends as such always do, with a romance.

Boston: Lothrop, Lee & Shepard. $1.

Lotta Embury's Career, by Elia W. Peattie, is a good story of a girl who couldn't be a musician, but could make a success of her father's little store.

Houghton, Mifflin. $1.

The Three Gays, by Ethel C. Brown. For the holidays the Gay family went back to their grandfather's farm, where they cooked the Christmas dinner in the brick oven, had a live Christmas tree out in the snow, and did many jolly things that city boys and girls can never do.

Philadelphia: Penn Pub. Co. 80 cents.

Polly Comes to Woodbine, by George Ethelbert Walsh. Polly came from a children's home and Polly was blind. What happened to her, and what happened thru her to Jethro and anxious Miranda, make a happy story.

Boston: Lothrop, Lee & Shepard. $1.

BOYS' BOOKS

The Twisted Skein, by Ralph D. Paine. A well-written story of Yale undergraduate life, dealing largely in athletics. The hero is an earnest, studious young fellow working his way thru college. The episode with "the wrong sort of a girl" and the threatened blackmail suit is inappropriate in a boys' book.

Scribner. $1.35.

In Camp on Bass Island, by Paul G. Tomlinson. "Instantly all was confusion. Every one was immediately wide awake and on his feet." And so on. Four boys camping in the Thousand Islands—fishing—swimming—"fire!"—a hermit's cave. About 300 pages of literary light-lunch.

Scribner. $1.25.

Arlo, by Bertha B. and Ernest Cobb. A simply and gracefully told little novel for little readers. A little boy, exiled from a dukedom, wanders for some years thru the country, finally to discover that his own father has become the reigning duke, and the memory of a song brings him home to his true parents.

Riverdale Press. $1.

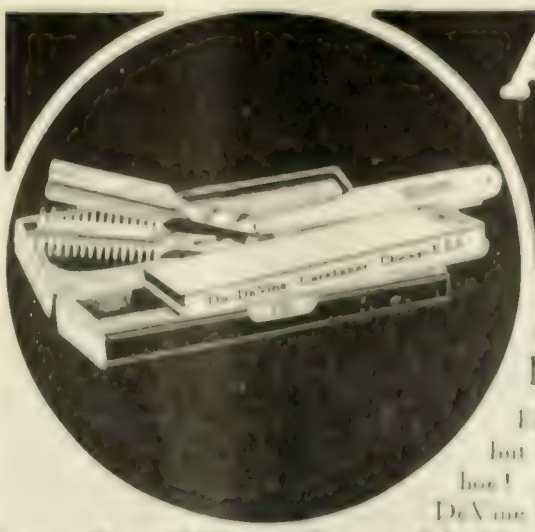
The Fur Trail Adventurers, by Dillon Wallace. Big game hunting, exploring, snowshoeing, camping and kindred adventure in the snow-covered Thunder Bay District. Phil Porter, the hero, is the usual exaggerated superboy, who accomplishes wonders in bravery, skill and resourcefulness, so popular in this class of fiction.

Chicago: McClurg. $1.25.

Sandy's Pal, by Gardner Hunting. The story of a friendship between a boy who had everything and a boy who had nothing. Wholesome and democratic in tone.

Harper. $1.25.

The White Caravan, by W. E. Cule. A charming and tenderly told tale of a little English boy stolen from his beautiful home and who suffers loss of memory, which is restored to him when, after many adventures, he is returned to his family. It will appeal strongly to children of from ten to thirteen years.



Dutton. $1.35.

The Lost Prince, by Frances Hodgson Burnett. A romantic and stirring tale for boys of a manly young royal exile from a Balkan country called "Samavia" and founded on an old Serbian legend of a young prince restored to the throne after 500 years' exile of his dynasty.

Century. $1.35.

The Swiss Family Robinson. A simplified form of this children's classic, clearly printed and well illustrated. It is made readable for younger children by the omission of the long and tedious disquisitions and moralizations.

Ginn. 50 cents.

A Real Gift for a Real Man

A Great Xmas Gift!

No man has too many razors

Every self-respecting man *shaves himself!* but he wants to do it with a *real razor*—not a hoe! And he wants the safety element too! The DeVine Razor is absolutely the only razor which *combines safety with the smooth, powerful, sliding stroke* of the old fashioned razor.

Not only that but the DeVine has a *complete caretaking outfit*, including hone, strop, permanent hollow ground double edged blade, with sweet safety guard—all in *handsome Russia leather case!*—a beautiful Christmas package.

Remember—no loose blades to buy or bother with and no intricate parts to clean. Thousands of enthusiastic users endorse it because anyone who can *spread butter* can take care of the DeVine! You don't have to *learn*—you just *shave*—easily, quickly and comfortable.

And this is a *lifetime present*—always a pleasant reminder of the giver.

And the price—would be cheap at double—compared with other razors. Our price $5.00 prepaid. Satisfaction *absolutely guaranteed*. If you don't say it's the greatest value ever offered we'll cheerfully refund your money.

Act quickly! **Christmas is close at hand**

Pin a five dollar bill to this coupon and the DeVine comes by return mail. It will reach you before Xmas.

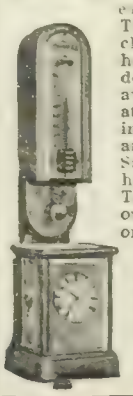
This Little Device In My Living Room Eliminates All Damper-Tending Drudgery & Uncertainty

"I Simply Couldn't Get Along Without It"—

Is the never failing expression and endorsement of every woman who enjoys the home comfort afforded by the accurate temperature control of



The "MINNEAPOLIS" HEAT REGULATOR

The very heart of the heating plant. Relieves one of all care and worry and makes the perfect heating of the home an easy matter.

The time attachment enables one to secure a change of temperature at any pre-determined hour. For example, the indicator is set for 60 degrees during the sleeping hours and the time attachment arranged for a change of temperature at say 7 A. M. At exactly the hour designated the indicator automatically and silently moves to 70 and the rooms are warm at the time of arising. Saves fuel and many steps. Insures comfort and health.

The "Minneapolis" has been the standard for over 30 years. Used with any heating plant—old or new—hot water, hot air, steam, vapor or vacuum—coal or gas.

Sold and installed by the heating trade everywhere. Guaranteed satisfactory. Send for booklet—shows models, explains details, gives prices.

THE PERFECT CITY VEHICLE

Free from smoke and disagreeable odors. Simple in operation, silent, economical. The result of years of study, protected by several mechanical patents.

BROADWAY, Fifty-First St. and Seventh Ave.
NEW YORK

WANTED by a gentlewoman of many years' experience as companion to a lady. Is a pleasing reader and used to reading aloud. Has a cheerful disposition, has been around the world and knows how to travel. Could take charge of office, secretarial and is familiar with business methods, etc. Reply, stating requirements to remuneration, etc., to "A. M." care Independent.

The Master of the World, by Jules Verne. An attractive reprint of one of this prophetic writers last and most imaginative books and companion volume to his aeroplane-prediction romance "Robin the Conqueror." In this story, the scenes of which are laid in America, there is a machine, a sort of hydro-aeroplane, "The Terrible," that travels on the land like an automobile, under the water like a submarine, on the surface like a motor boat and in the air like an aeroplane.

Philadelphia: Lippincott. $1.

The Lion Hunter, by Rousleyn Gordon-Cumming, is the breezy, picturesque and vivid descriptions of a Scotch sportsman hunting big game in the heart of wildest Africa three-quarters of a century ago, when Livingston and Du Chaillu we e almost the only other white men who had braved those dangers. With crude, smooth bore guns and a small native following the author certainly accomplished wonders. The country was teeming with game and his adventures were thrilling and varied, Tho at times his sportsmanship would not measure up to modern ethics, his ingenuousness and simple honesty are appealing and the book is refreshing and delightful.

Outing. $1.

American Boy's Book of Bugs, Butterflies and Beetles, by Dan Beard. The author has given more wholesome, practical information on sports, mechanics and out-of-door life to boys than probably any other American writer. And he knows exactly how to interest them, what to emphasize and what to omit. He reaches his juvenile audience most effectively. In this book he tells how to collect and why, how to care for collections and then gives definite and accurate descriptions of the different species of insects. The book is well illustrated with sketches and diagrams and as practical as it is interesting.

Philadelphia: Lippincott. $2.

The Book of the Thin, Red Line, by Henry Newbold. A timely and stirring book for older boys—stories of real military adventures by real men who won distinction and high command by their heroism and gallantry in action. There are six stories, the scenes in India, in Europe and one in our Civil War with Stonewall Jackson. The book is admirably illustrated with full-page color plates.

Longmans, Green. $1.50.

Thomas A. Edison, by Francis Rolt-Wheeler, is a sprightly, anecdotal and descriptive account of the great inventor's life and work, with untechnical explanations of his greatest mechanical discoveries.

Macmillan. 50 cents.

Great Authors in Their Youth, by Maude M. Frank. Scott, Stevenson, Thackeray, Dickens, Browning, Barrett, Tennyson, Brontë, Lamb, Austen and Ruskin revealed as children, with brief accounts of their homes and early associations.

Holt. $1.25.

FOLK WHO WRITE

It almost shakes one's faith in the newspapers to find that after all our obedient pains to rime Oliver Onions with lions according to instructions imported from England, here comes his own announcement that his family pronounce it the "common or garden way"!

For devotion to a loved pursuit it would be hard to match the life of Dr. Henri Fabre, who died last month in his little home in the Midi after a lifetime struggle with poverty and indifference. Darwin long ago recognized him, but he was eighty before his countrymen wakened to the fact that a great scientist was in their midst and saw to it that he should no longer dwell close to the edge of want.

What a pity the stage-struck Alcott girls could not have foreseen the success of *Little Women* as a play and now the putting on the boards of *An Old Fashioned Girl*

$2 a Box DURO SHIRTS wear like iron

A REVIEW OF FINANCE AND TRADE

THE INVESTOR'S SERVICE

The Independent is now offering a Service for Investors which will give personal attention to the desires of its subscribers for information in regard to investments of all kinds. We cannot of course decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write to us frankly and this Department will give them by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves.

THE YEAR IN FINANCE AND TRADE

BY FRANK D. ROOT

FINANCIAL EDITOR OF THE INDEPENDENT

AT the beginning of the present year the Great War was five months old. In 1914 its weight had been added here to other influences which were making the financial and industrial record one of depression and restraint. When that year closed there were signs of coming improvement, but the situation was quite unsatisfactory. For example, in the great iron and steel industry the output of pig iron had fallen in December to only a little more than 1,500,000 tons, and the net earnings of the Steel Corporation in the December quarter were so inadequate (less than $11,000,000) that they yielded nothing for the common stock and only $700,000 for the dividend of $6,364,000 on the preferred shares. The country's steel mills were working at not more than 60 per cent of their capacity and thousands of steel workmen were idle. Prices had averaged $2 per ton below those of 1913. The reduction of railroad earnings had been 6½ per cent for gross and 8¼ per cent for net, and the market prices of standard railroad shares had declined, the list showing considerable losses for the year.

The number of failures had increased from 16,037 to 18,280, and the liabilities from $272,000,000 to $358,000,000. The building industry showed a reduction of 9 per cent; gold exports had risen to $165,000,000; the price of copper (13 cents) was restricting production, and the price of cotton was less than 8 cents a pound.

But on the other hand, the crops had been large; it had not been found necessary to use the gold pool of $109,000,000 or the cotton pool of $135,000,000; the New York Stock Exchange, closed for several months, had been reopened on December 12, and an extraordinary increase of exports, with a great excess of shipments over the imports received, was making a great trade credit in favor of the United States.

Such a record and such a situation are in sharp contrast with our condition at the present time. Turning again to the iron and steel industry, we find that the output of pig iron has rapidly increased until the record was broken in October, when 3,125,491 tons were made. The steel mills have more work than they can do. They are rejecting orders. Prices are high. For several months past additions have been reported every week. The Steel Corporation's net earnings have advanced from $12,500,000 in the first quarter to $28,000,000 in the second, and $38,500,000 in the third. This probably foreshadows restoration of the suspended dividend on the common stock.

Our exports have been so large that in the twelve months that ended with October they exceeded the imports by $1,626,886,000. During the last four months there has been an unprecedented volume of railroad freight traffic. At and near the ports there is a remarkable congestion of export freight. Several railroad companies are refusing to receive freight

for ocean shipment. Market prices of railroad shares show gains of from ten to twenty points. In the prices of the shares of manufacturing companies that are working on war orders the gains have been extraordinary and amazing. Business on the New York Stock Exchange has risen from only 5,000,000 shares in January to an average of nearly 21,000,000 in the four months ending with November. Copper at 20 cents, instead of 13, has stimulated production and increased mining companies' dividends. The price of cotton has risen from 7¾ to 12½ cents a pound. Gold imports of $326,000,000 have succeeded exports of $165,000,000. Our crops are greater than ever, and at the head of the list stand a billion bushels of wheat.

At first, however, the coming improvement was not clearly promised or foreseen. In January the prevailing sentiment was hopeful. Exports were very large. Neutral nations accustomed to borrow in Europe were coming to us for money. There were new loans to Sweden, Norway and Argentina, with others, at rates averaging a little more than 5 per cent, to Canada's provinces and cities. The gold pool was dissolved. Great exports had left no warrant for the use of it. And the pool made for the relief of cotton growers ceased to exist. Applications to the managers of it had called for only $28,000. Only a small part of the issue of $384,000,000 of emergency currency was still outstanding, and nearly all of the $215,000,000 of Clearing House certificates had been retired. The price of cotton was rising slowly in January, but was still below 9 cents a pound. The Stock Exchange was open again, but trading was restrained. Soon after the beginning of the year the payment of dividends on the common stock of the United States Steel Corporation was suspended, owing to small net earnings. This action deprest the stock market. Transactions on the New York Exchange amounted to only 5,000,000 shares in January, and in February were less by 700,000. But in February the excess of exports over imports rose to $173,500,000, which was to be the high record until October. Sterling

OUR GREAT EXPORTS

The remarkable growth of our exports, and of the excess of exports over imports, since the beginning of the war is shown below. In August of last year, the first month of the war, the excess, $19,400,396, was on the other side of the account, but there was a change to a credit balance of $16,000,000 in September, and thereafter the credit excess rapidly increased. The record was broken in October. The forthcoming official report may show as large an excess for November:

1914	Exports	Imports	Excess of Exports
August	$110,367,494	$129,767,890	*$19,400,396
September	156,052,333	139,710,611	16,341,722
October	194,711,170	138,080,520	56,630,650
November	205,878,333	126,467,062	79,411,271

The Union Trust Company of New York will act as **Trustee of permanent charitable, educational or religious trusts,** created either under a will or a trust indenture, and gives special attention to trusts of this character. The Company also acts in the capacity of Treasurer, Assistant Treasurer, Financial Agent or Depositary for such institutions, and is qualified and equipped to render expert and attentive service in all such relations.

The Union Trust Company's record of fifty years in the continuous administration of all the usual forms of trusts invites confidence in the permanent maintenance of a high standard of ability as trustee.

UNION TRUST CO., 80 Broadway
CAPITAL AND SURPLUS - $8,300,000

exchange declined to 4.79, and this was the subject of much comment. But there was soon to be a lower rate. The course of exchange pointed to the change that had taken place since the early weeks of the war, when the discount was against us, and exchange rose even to $7.

In March there was more activity in the market for securities. Congress had adjourned, the Ship Purchase bill had been laid on the shelf, and two decisions favorable to railroad interests were announced by the Supreme Court. One annulled West Virginia's two-cent passenger rate law, and the other rejected the law of North Dakota which reduced freight rates for coal. New York made a satisfactory sale of bonds, altho the interest rate had been reduced from 4½ to 4¼ per cent. The price of copper rose more than 2 cents a pound, to 15½; cotton was selling at 9¾ cents, instead of 7¾, and wheat was in the neighborhood of $1.60 at Chicago.

SIGNS OF BETTERMENT

There were plain signs of betterment at the beginning of the year's second quarter. Confidence in the ability of the nation to receive and pay for all the American securities which foreign holders might offer caused a removal of all minimum limits from Stock Exchange business. The steel industry was engaged at 70 per cent of its capacity, and the Corporation's earnings were rapidly increasing. It was in the first week of this quarter that trading and speculation in the shares of manufacturing companies at work on war orders attracted attention thruout the country. Because of this trading the New York Exchange's business, which had been only 4,300,000 shares in February, and less than 8,000,000 in March, leaped up to 21,000,000 shares. Bethlehem Steel began its upward march, rising to 83, and there were large advances for American Locomotive, New York Air Brake and the motor company stocks. Five-eighths of an order given to the Canadian Car and Foundry Company for $83,000,000 worth of shrapnel had been distributed in this country, and there were numerous reports about other orders. Purchasers of shares appeared to assume that the profits had already been gained and were soon to appear in dividends. A receivership for the Rock Island Railroad did not check the speculation movement, and days when the transactions exceeded a million shares ceased to be a novelty. The price of copper rose to 21 cents, sales of wheat at $1.65

THE YEAR'S CROPS

	1914	1913
Wheat	1,002,029,000	891,017,000
Corn	3,090,509,000	2,672,804,000
Oats	1,517,478,000	1,141,060,000
Barley	236,682,000	194,953,000
Rye	44,179,000	42,779,000
Buckwheat	16,350,000	16,881,000
Flax	18,416,000	15,350,000
Rice	26,251,000	23,649,000
Hay, tons	101,276	88,686
Potatoes	425,903,000	462,495,000
Tobacco, lbs.	1,050,025,000	1,034,679,000
Cotton, bales	11,161,000	16,134,930

were made and there was some gain for cotton.

Prices of commodities as well as those of securities suffered in May, because of the sinking of the "Lusitania." Stocks declined, the Exchange's business fell away to 12,500,900 shares, copper's price lost 2 cents, cotton was lower by 1 cent, and 20 cents a bushel were cut from the price of wheat. In June, the decision of the Federal Court at Trenton against dissolution of the Steel Corporation for violation of the Anti-Trust law started an upward movement, which carried Steel common shares from 55 to 69, but Secretary Bryan's resignation caused decline again. The importation of $40,000,000 of gold did not prevent a fall of exchange to $4.75¾. Copper prices were up again, but in anticipation of a crop of a billion bushels the price of wheat dropt to $1.04.

WAR ORDER SPECULATION

The Government's crop report indicated 963 bushels of wheat, and the price advanced a little in July, but the high rates of earlier months were not to return. At the beginning of the year's third quarter the wild trading in war order shares was resumed. It was in the first week of July that Muenter attempted to kill J. P. Morgan, Great Britain's agent with respect to orders for war supplies. Activity in the steel industry demanded attention, for now eighty-seven per cent of capacity was employed, and the Corporation's net earnings for the quarter ending with June had been $27,950,055, against only $12,458,159 in the preceding quarter. The Corporation had na war orders, but orders taken by other companies made a market for its crude forms of steel, and considerable quantities of these forms—especially the rounds used in making shells—were sold to foreign governments for munition factories abroad. The Corporation's monthly net earnings had steadily advanced from $1,600,000 in January to $11,300,000 in June, and the pig iron output from 1,601,421 to 2,380,827 tons. Official reports of the fiscal year's foreign trade

Have You Overlooked This Risk?

Although the vast majority of employees are absolutely honest, that defalcations do occur is proven by the fact that this Company alone deals with an average of eight defalcations daily!

Have you overlooked the risk you may be running in leaving your business funds exposed to this danger?

An American Surety Bond is the best guarantee against such a loss, because it has behind it a Company whose ability and willingness to pay just claims promptly is recognized throughout the land.

showed that the predicted billion excess of exports had been reached, the exact amount having been $1,094,422,792, with which may be compared the preceding year's $470,653,491. Wild speculation characterized transactions on the Stock Exchange, where the price of Bethlehem Steel rose to 275. Many warnings were published or given privately to traders by banking and brokerage houses. Large deposits were required from trading customers and new restrictions were imposed upon loans.

In August there was even a greater volume of trading in stocks (nearly 20,500,000 shares), and railroad securities were advancing until the movement was temporarily checked by the sinking of the White Star steamship "Arabic" and the Interstate Commerce Commission's decision granting to the western railroads a freight rate increase of $1,600,000 in reply to their appeal for $7,500,000. The commission also ordered a reduction of the freight rates on anthracite coal. Sterling exchange fell to $4.55½, altho $40,000,000 of gold and $65,000,000 of securities were received from England by way of Halifax, having been carried across the ocean on battleships. The price of wheat at Chicago dropt to 97½, mainly because of our favorable crop reports and an estimate that the world's crop of wheat exceeded that of 1914 by 13½ per cent.

THE ANGLO-FRENCH CREDIT

There had been abundant evidence that some new provision must be made for paying the debts here of Great Britain and France. In September the Anglo-French commission, led by the Lord Chief Justice, Baron Reading, arrived in New York, where the two nations desired to negotiate a loan of $1,000,000,000. After several conferences with our leading bankers it was announced on the 28th that the loan was to be $500,000,000, for five years at 5 per cent, issued so as to yield about 5½ per cent, altho subscribers thru the banks of the large American syndicate would receive only a little less than 6 per cent. All the money was to be expended here, and the sum was inadequate, for arrangements have since been made for an additional credit of $50,000,000, which may be increased to $150,000,000. There was opposition from certain German-American organizations, which sought to restrain subscribing banks, but a great majority of our people realized that success of the project was required for the benefit of American trade, industries, and agriculture. Exchange de-

declined to $4.50, but there was a partial recovery. In this month there was a furious and reckless movement in the stock market, where war order shares sometimes gained 30 or 40 points in a day. The price of wheat remained in the vicinity of one dollar, but the price of cotton (less than 8 cents when the year began) rose to 11¾ cents. While the railroads' gross earnings had shown a reduction of nearly three per cent for the first half of the year, their net earnings had been increased by 13¾ per cent. In this month the roads began to feel the severe pressure of freight for export, a pressure that was to enlarge their traffic and receipts.

The year's fourth quarter opened with a fresh burst of speculation in war order stocks. October's transactions on the New York Stock Exchange amounting to 26,678,953 shares. A succession of days showing from 1,000,000 to 1,500,000 shares required work in the night as well as by day in banking and brokerage houses, where rooms full of cots for the clerks could be seen. Bethlehem Steel common shares rose to 459, and then, for a short time, to 600. There were extraordinary advances for the shares of motor companies and for those of other corporations working on contracts for arms, powder, and ammunition. No dividend has been paid on the Bethlehem Steel common stock since it was listed, nine years ago, and only once before this year has the price passed 50. Then, in 1912, sales were made at 51⅝. The price in January last was 46½; on October 22 there were sales at 600. A considerable part of the price has since been lost, sales having been made at 471.

A REVIVAL IN STEEL

It became known that in the steel industry a remarkable revival of activity was in progress, due partly to domestic demands, altho war orders —including those for rails, locomotives and cars—were still the most influential cause. The capacity of the mills was engaged for many months ahead, and offers of large premiums for early delivery on new orders had been rejected. At the furnaces the record for output of pig iron was broken in October, when 3,125,491 tons were made. The Corporation's net earnings for the quarter ending with September had been $38,718,644 (rising from $12,500,000 in the first quarter, and a little less than $28,000,000 in the second), and it is generally expected that the dividend on the common stock will soon be restored. For this reason the price of shares has recently been in the

} Directors

neighborhood of 87. In October several prominent railroads which have terminals at Eastern ports made new high records for both gross and net earnings. This has encouraged the companies to spend large sums for cars, rails, etc., and in this way the steel industry has gained something The Government's final report on grain satisfied those who had been looking for a billion wheat crop. The estimate was 1,002,029,000 bushels For oats also a new high record was made, and several of the other crops have never been equaled. The yield of corn nearly reaches the summit, and exceeds last year's crop by 400,000,000 bushels. Sales of cotton were made at 12½ cents. The month furnished much evidence of prosperity.

THE CONGESTION OF FREIGHT

There was additional evidence in November of general improvement At the steel mills the activity was without precedent, and the pig iron output was only a shade below October's. Export freight congestion at Eastern ports caused the railroads to reduce the free storage time allowed from 30 to 15 days, and a committee was appointed to deal with the problem from day to day. There were 50,000 loaded cars on side tracks near New York. The number of ocean carriers has been reduced by the war, but the exports very largely exceed the normal quantity. Shipments to the Allies in nine months were nearly $1,000,000,000 Canada's seizure of 17,000,000 bushels of export wheat caused an advance of about 10 cents a bushel in our market. In this month and the first half of December more attention was given in the stock market to railroad securities, although remarkable gains for several war order shares were recorded. Those of the General Motor Company (sales at 82 in January) rose to 558.

Extra dividends on the stocks of copper, oil and powder companies began to appear. The Allis-Chalmers Machinery Company paid something on its preferred shares for the first time in three years. There was a small reduction of the price of cotton, following the Government's report, showing a crop of only 11,161,000 bales, against last year's 16,134,000. The change is due mainly to a 14 per cent reduction of acreage Trading in stocks was restrained in December by the fact that Congress was in session and by some apprehension as to possible international complications Even the announcement that the Steel Corporation's unfilled orders had been increased in one month by 1,024,037 tons did not

DIVIDENDS

stimulate the market. Not more than 900,000 tons had been expected. The quantity has been more than doubled since last December. Steel prices continue to rise. The average for all steel products is now $39.68 a ton. This, the highest average since 1907, shows a gain of $7.50 since August, and one of $9.74, or 32½ per cent, since the beginning of the year. Freight congestion on the railroads led two Eastern companies to proclaim embargoes even upon purely domestic shipments.

GREAT INTERNATIONAL LOANS

Our foreign loans since the war began exceed $1,000,000,000, and about 80 per cent of the money has been expended here. The Canadian Government, eight Canadian provinces and ten Canadian cities have borrowed $147,000,000. Latin-America is in the list for $44,000,000. We have made small loans to Switzerland, Sweden, Norway and Greece. Great Britain, France and Russia were borrowers of the largest sums. Our net gain from immigration in the year was very small. Reference has already been made to our great trade with foreign lands. For the twelve months that ended with October the total, never before equaled was $5,010,382,000. With an import loss of $188,000,000 there was an export gain of $1,177,800,000.

In the closing weeks of the year all the reports from authoritative sources are highly favorable as to the condition of business and the leading industries. There has been a steady upward movement. Our crops have been very large, with a demand for the surplus at good prices. Money rates have uniformly been low. In recent months the traffic and earnings of our railroads have been growing. Our manufactures have been greatly stimulated by orders from belligerents and also from neutrals. We are planning to extend our trade in countries where in the past we had scarcely a foothold, and the plans are in the hands of men well equipped for the work. In the year 1915 no other country has been so fortunate as our own.

The following dividends are announced:

International Silver Company, Coupons No. 26 of Debenture Bonds, payable on and after January 1, 1916.

Manila Electric Railroad and Lighting Corporation, quarterly, 1½ per cent, payable December 1, 1915.

United Shoe Machinery Corporation, quarterly preferred, 1½ per cent; common, quarterly, 2 per cent; both payable January 5, 1916.

Baldwin Locomotive Works, preferred, semi-annual, 3½ per cent, payable January 1, 1916

Ray Consolidated Copper Company, quarterly. 50 cents per share, payable December 31, 1915.

The Brooklyn Savings Bank, 4 per cent per annum, payable on and after January 20, 1916.

Utah Copper Company, quarterly, $1.50 per share, payable December 31, 1915.

When Boston Burned

After the disastrous $80,000,000 conflagration that swept Boston in 1872, a Boston newspaper paid tribute to the Hartford Fire Insurance Company's prompt and liberal settlement of its enormous losses.

"All adjusted claims were paid at sight," said this newspaper, "without discount or delay. Such a record is its own argument for integrity, ability and determination. A policy in the Hartford is as good as a gold bond."

And it is worth adding that this disaster came less than a year after the great Chicago fire that cost the Hartford Fire Insurance Company over $1,933,562. Such is the financial strength back of the

INSURANCE SERVICE OF THE TWO HARTFORDS

For over a century the Hartford Fire Insurance Company, through war, panic and disaster, has met every honest obligation fully, fairly, and on the dot of time. As a result it writes today more fire insurance than any other company in the United States.

The Hartford Accident & Indemnity Company, extending the parent company's activities into the field of casualty and bonding insurance, has already earned a reputation worthy of the Old Hartford's best traditions.

The two companies, between them, write practically every form of insurance but life insurance.

Check on the coupon below any form of insurance in which you may be interested. Mail it to us and we will send you full information.

INSURANCE

CONDUCTED BY W. E. UNDERWOOD

THE YEAR'S INSURANCE

Of course, it is impossible in advance of the actual figures themselves to present even an approximately correct statement representative of the progress made by the various branches of insurance during the year now drawing to a close; but to one serving as chronicler and commentator of that business, there come day by day numerous vague impressions which, cumulative in their effects, gradually harden into certain well defined beliefs as the calendar period approaches its end, and these fairly serve to indicate broadly what the result has been in sum. Upon just so shallow a base do I venture the statements which follow.

According to these indications the aggregate amount of premiums invested this year by the American people for insurance protection of all kinds considerably exceeds that expended by them in any previous year. We naturally expect there will be a steady increase each year; growth upward is to be looked for in an industry as vigorously cultivated as is that of insurance in the United States. But it seems to have exceeded the average in 1914.

In the life insurance branch we have about 250 life insurance companies which may be classed as old line, legal reserve. There are about 200 joint stock fire insurance companies and about 130 joint stock casualty and surety companies. In addition to these, there are something like 300 assessment associations and fraternal orders, furnishing life or accident insurance or both. Counting per capita, we are by long odds the most heavily insured people on earth.

Of the old line life companies perhaps thirty-five, all orthodox in the matter of calculating policy reserves, have probably written seventy-five per cent of the new business transacted in the year. Their efforts seem to have met with more than the usual measure of success and when the returns are fully made I expect to find that the greater number of them will have broken all previous records. The other 200-odd, using various modifications of the policy reserve principle, have, with some exceptions, either held their own or made satisfactory progress. A comparatively small number of the latter class, inherently defective either as to management or financial condition, offer little promise of long continuance of days. The companies in this class are to be carefully scanned by policyholders. Of more than 250 organized or projected within the past decade, into which stockholders paid in on capital account more than $41,000,000 and nearly $32,000,000 additional as surplus, exclusive of the expenses incident to organization, the latter estimated at over $100,000,000, sixty-five have already failed, merged, retired or otherwise ceased business. Of more than $7,000,000 of surplus which the sixty-five had when they started, but $1,000,000 remained at the end; and on a capital estimated at $15,000,000 they paid but about $100,000 in dividends to stockholders.

If the record of the fire waste in the United States and Canada is any indication of the experience of the fire insurance companies, the condition of the latter has materially improved during 1914. There seems to be a reduction of between $50,000,000 and $60,000,000 in North America in favor of this year as compared with 1912 and 1913. The companies will doubtless reflect this experience, in which event there is some probability that there will be a satisfactory showing, especially among the leaders, in underwriting profit. There has been little adverse legislation to hamper their activities and no disturbances of a seriously obstructive character save in the State of Illinois, where the present Insurance Superintendent has been strenuously endeavoring since his accession to the office to make trouble for them in the courts. Up to the beginning of this year there was a marked tendency in a number of the western and southern states to deprive the fire companies of their rating privileges by making them subject to review by commissions appointed for that purpose, or by the commissioners of insurance. As it is, there are several states in which this condition now exists. While it is doubtless entirely useless for me to say so, this is a serious mistake and can only result in either driving the best companies from fields so afflicted or in raising the rates by increasing the cost of doing business. Fire insurance thrives best, at the lowest rates, where the insurers are not hampered by restrictive laws and regulations. This is proved by the figures of the older eastern states when compared with those shown by the western and southern states.

I may observe, incidentally, that some of the troubles with which the fire insurance business as a whole has to contend are caused by the tactless acts committed now and then by some of the largest companies engaged in it. One of these was recently indulged in by a large New York company in announcing that it would soon divide among its stockholders a surplus fund of $7,000,000 which, with the investment of an additional $1,000,000 by the stockholders, would be used in increasing the capital stock from $2,000,000 to $10,000,000. It is not claimed that the $7,000,000 has not been fairly earned, nor that the stockholders are not fully entitled to it. In fact, I am quite sure that, upon investigation, it will be found to have been earned—not out of profits made on writing risks—on the investment of the assets. In the present state of the public mind the declaration of such a dividend was injudicious; and if it does not reëcho thru several legislative halls this winter, to the disadvantage of the whole fire insurance structure, I shall be happily disappointed.

Barring the personal accident and health branch of the casualty business, I am under the impression that it has prospered greatly this year. There is keen competition in the accident branch and, under the most favorable conditions, profits are small. Losses amounting to nearly a million dollars were incurred this year in the "Lusitania" disaster. There have been other heavy individual losses, especially in the State of Missouri as the result of a suicide law there which, thru court decisions, has been twisted to cover accident losses. All the other lines worked by the casualty companies, and especially that of workmen's compensation, seem to have realized substantial profits.

Considered as a whole, the insurance business is in a sound and healthy condition and has shared fairly in the unusual prosperity which has blest the United States this year.

L. C., Rice Lake, Wis.—If you will write to the United States Casualty Company, 80 Maiden Lane, New York City, they will furnish you with full particulars respecting a new policy they are writing which, excluding death benefits, provides weekly indemnities for accident and sickness disabilities. The rates, ages 18 to 49, are, respectively, $40, $47.50 and $53.75.

M. D. S., Enterprise, Ala.—The Knights and Ladies of Honor is not a life insurance company; it is a fraternal assessment life insurance association. It accumulates no reserve to offset the increasing death losses due to advancing age, and is compelled to adopt such methods as you describe. This order has been losing business steadily since 1907, the total insurance in force at the end of that year being $88,027,250, as against $62,728,000 at the end of 1914. During the same period, its total disbursements each year have used its total income. Either you must pay an annual rate sufficient to meet death losses (which are increasing every year) and expenses, plus a sum of money to be used as the nucleus of a growing reserve, or you must submit to a readjustment periodically that will result in raising money enough to make good accumulated deficits. If you can get a policy in a well established old line company with a good dividend record—

This department of The Independent will undertake to furnish on the request of readers any information respecting the business of insurance and the companies transacting it which we have or can procure. We cannot, however, pass upon the debatable comparative differences between companies that conform to the requisite legal standards set up for all, except in so far as the claims made by any of them seem to be inconsistent with the principles of sound underwriting. Address all communications on insurance subjects to the editor of the Insurance Department.

"PEACE ON EARTH"

HENRY FORD—Everybody is for peace—so why not have peace?

CARDINAL GIBBONS—Thank God we are at peace with the world

GUSTAVE RIVET, SENATOR—Who dares talk of peace at this time?

HERMAN BERNSTEIN, EDITOR OF *The Day*—The peace mission cannot fail

M. LOISY—Is Christianity bent upon destroying itself, or does it exist no longer?

ABBÉ WETTERLÉ—No peace is possible until Germany is completely crushed.

VICTOR BERARD—I say that it is criminal to talk of peace now.

LONDON POST—Germany can have peace as soon as she likes—but only on the terms of the Allies.

EMILE BOUTROUX, DIRECTOR OF THE THIERS FOUNDATION—The wise thing to hope for is a long war.

MAXIMILIAN HARDEN—For the German people desire only a worthy peace, and will never diminish its aims.

COLONIAL SECRETARY SOLF—Germany asks nothing more than an honorable peace with guarantees for a happy future.

KING CONSTANTINE OF GREECE—My people do not want war, and if they and I can help it we shall not have any.

PRESIDENT CHARLES WILLIAM DABNEY—The civilized world is looking . . . for truth, for righteousness and for peace.

POPE BENEDICT—Prepare for that peace which the whole of humanity ardently wishes for, that is, a peace that is just and lasting.

MME. DANIEL LESNEUR—A peace which would bring Europe back to the instability of the days before the war cannot be considered.

BONAR LAW—In spite of what is happening in the Near East, I am more hopeful than I have been for a good many months.

CHANCELLOR VON BETHMANN-HOLLWEG—This war can only be terminated by a peace which gives human certitude that it will not return.

ADOLPHE CARNOT—An assurance of final triumph and we shall then be in a position to dictate peace. It is not for us to talk about peace until then.

PRESIDENT POINCARE, OF FRANCE—It was not to win a precarious peace that France rose up in mighty grandeur to the accents of the "Marseillaise."

ALBERT THOMAS, CHIEF OF MUNITIONS BUREAU OF FRANCE—There will be no peace until a system of right, founded upon the victorious union of the Allies and sup-

Get the Saving Habit

The habit of saving has been the salvation of many a man. It increases his self-respect and makes him a more useful member of society. If a man has no one but himself to provide for he may be concerned simply in accumulating a sufficient sum to support him in his old age. This can best be effected by purchasing an annuity as issued by the Home Life Insurance Company of New York. This will yield a much larger income than can be obtained from any other absolutely secure investment. For a sample policy write to

ported by the free adherence of neutrals, has abolished forever the violence of war.

German Field Marshal von Hindenburg—This war must not end without the three principal sinners, Great Britain, Serbia and Italy, receiving just punishment.

Gabriel Hanatoux—We have already killed two or three million Germans and Austrians; since it seems that that is not enough, we shall keep it up until the survivors see reason.

Stephen Pichon, Former Minister of Foreign Affairs—Peace will be acceptable only when it can guarantee to France, the strength, prestige and prosperity of the victor, liberty and independence, a durable tranquillity.

Prof. Charles Richet, Member of the Academy of Sciences—The advantages of even a victorious peace seem to me mediocre in comparison with the blood which has been shed and the sacrifices made.

William Jennings Bryan—I hope that the Congress will at once assure the President of its readiness to support him in any effort which he may see fit to make to hasten the restoration of peace in Europe.

LOOK AFTER YOUR OWN FENCES

By William Frederick Dix

ONE eminent financier will predict that, in case this country should be drawn into the present European complications, an immense activity would be created, our foundries and mills and railroads would be rushed with work, stocks would rise and a general enthusiasm would usher in good times. Another will state that any such event as an entanglement with any warring country would be disastrous to America's prosperity, that the dangers and uncertainties and the fearful cost of warfare would cause a depression which we could not recover from in years.

Another expert in economics will say that, even if we keep out of the present war entirely, the effect upon us of a cessation of hostilities will be hard because Europe will have become well nigh bankrupt and exhausted, her purchasing power will be limited, that she will have to give up all luxuries for many years and that she will naturally have to encourage home industries and spend as little money outside her own frontiers as possible. Therefore, with poverty stricken foreign customers our own trade will languish. Another expert announces that American business will boom just as soon as the way stops because Europe will be in need of everything we can manufacture and grow and send over and that American goods will surely be in demand as never before.

One man will tell you you can make a fortune now by buying war stocks, another says it is too late and that some of them may collapse at any time. You hear wonderful tales of A, B and C buying something at 50 and selling at 500 and you wonder why in the world you didn't do the same. You perhaps scan the stock market reports and think that a fortune is within your grasp if

you can only hit it right. Many a conservative business man these days, weary of the daily grind and small margin of profits or no profits at all, is tempted to take one big plunge and see if he cannot somehow "win out big."

And in these days of disquietude and wars and rumors of wars and conflicting news and alarms and contradictory advice from the "men who know," it is a remarkably good opportunity to attend strictly to your own affairs and let the other fellow take the fearful risks and possibly rake in the winnings. A, B and C may, it is true, make large profits quickly. If they do you may be sure they will spread the glad tidings and tell you how easy it is if you were only as smart as they. But how about D and E and all the rest of the alphabet? How about the many who plunge and lose? Do they talk about it? Not much!

This is decidedly the time to look after your own fences, to see that they are sound and that your property is adequately protected. Do not speculate with your surplus earnings or your savings. This is the most favorable time to invest in good bonds, to increase your life insurance, to keep a good balance in your bank. It is not often that you can readily pick up gilt-edge bonds on a five per cent basis.

If you can introduce a little more economy into your personal and household expenses, do so now when you have such good company. "The best people are doing it." Do not strain your credit, reduce your debts, get yourself in as strong a position financially as possible. The whole world is in an abnormal condition and no one can possibly predict as to the immediate future.

The man who conducts his business and his household affairs along sound and conservative lines is the man who is in an admirable position. The man who, by some freak of the market acquires sudden wealth, may excite envy, but the man who pursues the even tenor of his ways, undisturbed by alarms, giving his energy and best attention to the business he knows best—his own—who thinks of safety first and who is wise enough to be thoroly conservative, is the man who will command, not the envy of the thoughtless but the admiration and the respect of the thoughtful.

New York City

THE BEGGAR

I will write no verses today;
From its blazing threshold the sun
Hath scattered its gold in my way;
I will walk till the daylight is done.

I will lie on the sweet-smelling grass
In my hunger to eat my bread,
Watching the clouds as they pass
In the azure seas overhead.

Beggar with thoughts in the sky,
Ragged among the flowers,
Earth-born and doomed to die,
Living eternal hours.

ATLANTIC MUTUAL INSURANCE CO.

ATLANTIC BUILDING, 51 WALL STREET, NEW YORK

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries.

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of	$27,964,578,109.00
Received premiums thereon to the extent of	287,324,890.99
Paid losses during that period	143,820,874.99
Issued certificates of profits to dealers	90,801,110.00
Of which there have been redeemed	83,811,450.00
Leaving outstanding at present time	6,989,660.00
Interest paid on certificates amounts to	23,020,223.85
On December 31, 1914, the assets of the company amounted to	14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

THE MOVIES

BY MARGUERITE WILKINSON

Where double rows of sharp, unwinking lights
Curve to a vivid arch above the door
Of the "Palace Theater," there a rasping lilt,
The stedfast gayety of the phonograph
I heard. The thing was singing "Tipperary."
I stopped to look and listen with the crowd
And read the lurid promise of sensation
That billboards showed. "Loretta's Only Sin,"
"A Gentleman Convict," caught in high finance,
"A Fight with Lions," gory, two reels long!
I saw the posters, gaudy green and red.
A train wrecked, and a comet in the sky,
And tawny lions grinning at their prey
And flourishing stormy tails.
Then I looked in.
Envious of those who purchased happiness
With ten cent pieces at a picture show.
And all the time the insistent "Tipperary"
Was calling idlers from the cheerless street.
And *"It's a long, long way to Tipperary
It's a long way to go!"* . . .

Then I went in and joined a sodden crowd
In the stale smother of their own hot breath,
Gazing, as only such and children gaze,
Upon the glamor of a world unknown.
Women were there from tawdry furnished flats—
Drab wives with sickly babies in their arms,
Who came to find a little glimpse of home
As money or the country makes it fair:
And other women, whose vague dreams had vanished,
Blown as a candle's flame before a wind
Of swiftly driven sorrow, doubt or sin,
Who came to seek those dreams of other days;
And there were men, the solid workingmen,
Mechanics of untaught imagination,
Who came to see the antics of the rich
Displayed in pomp upon the pictured screen,
To help out piece by piece a vision of wealth;
And other men, the failures of the city,
The frayed and faded tissue of the race,
(Who work no harm to others and no good
Can compass for themselves)—they came to color
The dingy fabric of experience
With this poor, garish loveliness and light.
And there were lovers, laughing girls and boys
Who spent, with all youth's own brave gayety
The wages of an hour's dull toil, who came
To find their own romance and know no good.
And there were children, fruit too early ripe
For soundness, sad in grim sophistication,
And then a few, whose hands were sealed and heavy
Against their kind, who had drunk sin like wine
And now must taste the bitter, bitter dregs
And fasting long for respite—to forget!
Such were the folk who drew with subtle power
My soul into the current of their pleasure.
For as I watched, I loved and understood
Yes, *"It's a long, long way to Tipperary—
But my heart's right there!"*
For us the lions were life and life's adventure.
Danger and stress and glory and abandon,
The triumph and dumbness of the spirit
"Loretta" was a princess in a tower,
And the young clerk who saved and married her
Was Galahad or Launcelot or Arthur,
The "convict" Judas, Faust or Macbeth
And we, with eager, all-devouring eyes
Were savoring the very core of joy
And Tipperary was the holy land
The heavenly land of every heart's desire
Gone were the debts, discomforts and the homely
Gone the dull, petty travesties of life
Our souls were free as the white souls of babes
We traveled all the way to Tipperary
"It's a long way to go!"

THE BUILDER

America, thou Builder!
Thou reacher up to God!
Thou, whose tall cities grope with thrusting spires
Into the shining empire of the sky,
Stand now with thy good weapons in thy hands.
There's a task here for a Builder.

Hark the wind
That moans in from the sea! It hath no more
The song of proud ships going unafraid
Nor the sweet hum of cities at their mills;
The beat of souls is in it . . . and the wings
Of wasted dreams, and the great gasp of Death.

See, there's a flame to eastward! Half a world
Burns to its naked timbers! Heav'n itself
Is stained, and all the dynasty of stars
Which we had built our stone to like a song,
Is blotted by the angry bloodied fires!

They burn! Our brothers' cities! All those towers
Where History lay cradled and where Truth
Dwelt in her golden garments like a Queen,
And Art, her handmaid, brushing from her robe
The Dust of rotted centuries, stood forth
Clear-eyed, a star-smudged palette in her hand,
And God Himself upon her brush's tip—
They burn! Those ancient splendid cities burn!
What Art is left? What truth? What History?
The whole's to build again—and we alone
Are strong to build it! Now, my country, rise,
And take the stone up in thy straining hands.
To thee of all the nations and the tribes
That e'er have played the game of Destiny
Is given the task to shape the world anew!

Then wake, for dawn is shining on the stone!
Fling thy tall spires to Heaven like a song!
Come, lift the world up to the rising sun,
America, thou Builder!

—From *Poems*, by Dana Burnet, Harper & Brothers.

PLAYING THE GAME

One of the most stirring stories of British grit and courage in the war is undoubtedly that of the charge of the London Irish Rifles in the attack upon Loos. The graphic account of their gallant fight against tremendous odds as one of the wounded soldiers told it to a correspondent of the *Winnipeg Free Press*, has the thrill of old-time warfare, in interesting contrast to the mechanical monotony of much of the fighting today:

As soon as we heard the great bombardment start we knew the big advance was about to begin, and for nineteen solid days the guns banged away, till as one wit in the regiment put it, "It was a wonder the shells didn't bally well jam together in the air," so thick did they come.

One set of our men, footballers by profession, made a strange resolution. It was to take a football along with them. The officer discovered this and ordered the football to be taken back to the base. But the old members of the London Irish Football club were not to be done out of the greatest game of their lives—the last to some of them, poor fellows—and just before Major Beresford gave the signal, the leather turned up again mysteriously.

Suddenly the officer in command gave the signal, "Over you go, lads." With that the whole line sprang up as one man, some with a prayer, not a few making the sign of the cross. But the footballers, they chucked the ball and went after it just as cool as if on the field, passing it from one to the other, tho the bullets were flying thick as hail, crying, "On the ball, London Irish!" and they actually kicked it right into the enemy's trench with the cry "Goal!" tho not before some of them had been picked off on the way.

When we reached the German trench under a cloud of smoke we found nothing but a pack of beings dazed with terror. In a jiffy we were over the parapet and the real work began. A kind of madness comes over you as you stab with your bayonet and hear the shriek of the poor devil suddenly cease as steel goes thru him and you know he's "gone west." The beggars did not show much fight, most having retired into their second line of trenches when we began to occupy their first to make it our new line of attack. That meant clearing out even the smallest nook or corner that was large enough to hold a man.

When it came to cold steel, which they can't stand, they ran like hares. So, having left a number of our men in the first trench, we went on to the second and then the third, after which other regiments came up to our relief and together we took Loos. It wasn't really our job at all to take Loos, but we were swept on by the enthusiasm, I suppose, and all day long we were at it, clearing house after house, or rather what was left of the houses, stabbing and shooting and bombing till one felt ready to drop dead one's self. We wiped the Twenty-third Silesian regiment right out, but it was horrible to work on with the cries of the wounded going up all round.

The battle now became terrific. It seemed as if the whole of Krupps was being chucked at us wholesale.

We could hardly stand from fatigue, having been in action steadily since Saturday morning, but still we fought on almost blindly.

The last few hours, however, were terrific. Our own shells had come to our rescue and under their shelter new troops came to relieve us, together with the stretcher bearers for our wounded. As soon as we got to the back trenches in safety a huge cheer went up from all the others. "The London Irish—Hurroo!"

Underwood & Underwood

THE NEW COMMANDER OF THE ENGLISH FORCES IN FRANCE AND BELGIUM—GENERAL SIR DOUGLAS HAIG

The Independent

VOLUME 84 DECEMBER 27, 1915 NUMBER 3499

THE DILATORY TACTICS OF AUSTRIA

AUSTRIA'S reply in the "Ancona" case is a legalistic attempt to befog the issue and delay a settlement. The points which it purports to make are these:

The United States has not precisely specified the facts on which it bases its case.

It does not designate the persons on whose testimony it relies.

It has not enumerated the particular points of law against which the commander of the submarine offended.

Even if its presentation of the facts were correct in all points and the most rigorous legal conception were applied to them, it does not in any way follow that blame should attach to the commander of the submarine or the Austrian Government.

The Austrian Government does not possess authentic knowledge of all the pertinent correspondence with the German Government on the similar, tho essentially unlike, cases to which the American Government seems to refer.

The Austrian Government is, as a matter of course, not bound by any attitude that the Berlin Government may have taken in those cases and reserves to itself full freedom of maintaining its own legal views in the present case.

These points, ingeniously as they are framed, are not well taken.

Amply sufficient evidence on which to base the American demand, even if no other were available, is contained in the official announcement of the Austrian Admiralty. There it is plainly admitted that the "Ancona" was torpedoed when it was no longer trying to escape and while passengers were still on board.

The mere statement of this fact carries with it the legal basis on which the American demand is founded. Such an attack is in direct contravention of the rules and principles of international law and equity.

The correspondence with the German Government was not referred to in the American note as in any sense binding on the Austrian Government. It was merely asserted there that thru this correspondence, which had been officially transmitted to Vienna, the Austrian Government was fully advised of the attitude of our Government toward such attacks.

The Austrian Government may not be bound by anything done by Berlin, but the American Government is bound to hold the Austrian Government to the same strict accountability to which it has held its ally.

There is no loophole of escape for Austria. Two courses are open to her. She can comply with the American demands or cause the severance of diplomatic relations between the two countries. The United States—Government and people—has no intention of allowing the junior partner in the Teutonic alliance to take up the business of violating American rights on the seas at the point where we persuaded the senior partner to drop it. Those rights will be respected to the full or we will know the reason why.

It is gratifying to observe the rapidity with which the exchange of notes is going on. The submission of Germany to our demands puts us on the most solid ground. Austria would do well to come down gracefully—and speedily.

UNDER NEW MANAGEMENT

THE retirement of Sir John French from the command of the British army on the continent is simply the public acknowledgment of what has long been apparent, that something must be done to retrieve British fortunes in France. Whether or how much he was to blame, what have been his merits and failings as a commander, are questions that will have to be left to the future historian who can study the full records of the campaign. It is sufficient for the present to know that he had one failing—he failed. Whether anybody else could do better remains to be seen and will now be tried.

"Lucky French" was the nickname given to him in the army by those who were astonished and perhaps envious at his continuous success and promotion to the highest command. But Solon's warning that a man may be called "lucky" but not "happy" until his life is over, comes to mind, for few men have suffered a more humiliating downfall than his retirement in the midst of a campaign which he had been planning for years and had conducted for nearly a year and a half. Lord Haldane stated in a speech last March that General French had for more than five years before the outbreak of the war devoted himself to the study of the anticipated conflict with Germany, with the idea of being given the command of the Expeditionary Force to be landed on the continent for the defense of France and Belgium. The *London Times History of the War* thus describes his preparation for what was to be the crowning triumph of his career:

> Particularly did he familiarize himself with Belgium, where he knew that the inevitable struggle would be contested, just as Marshal von Hindenburg spent years of his life in studying the bare plains and lonely swamps of Poland to which his name will forever be attached. Always a

believer in following out on the ground the lessons taught in the military text and history books, Sir John had made annual pilgrimages to Belgium for a number of years in succession, accompanied by one or two of his staff, visiting the battlefields of Marlborough's and Napoleon's campaigns, but always studying the ground with an eye to a possibility which he knew could not long be delayed. Among the Field Marshal's friends the name of "The Traveling Party" was given to him and his companions of these tours.

But unfortunately he was too late and had to fight in France instead of in Belgium, and with 80,000 men instead of the 160,000 which he had expected to have. Consequently he had to begin his campaign with a defeat and came near losing his whole army at the start. The foe met him at Mons only ten miles inside the Belgian border, on August 23, 1914, when the French had already begun their retirement. General French failed to coördinate his movements with those of General Joffre, and altho he managed the retreat skilfully, the British lost six thousand men in the four days following.

Since then the most that can be said is that the British have stanchly held their ground. Altho the British army has been multiplied by ten and the supply of ammunition is abundant, London has not yet been cheered by the news of any victory on land. Twice has Sir John French attempted to break the German line; at Neuve Chapelle, in March, 1915, and at Loos in September, 1915. But the loss of thousands of men advanced the British but a mile or two and the German line remains unshaken.

In both these battles the British lost their advantage and sacrificed their men thru deplorable mismanagement of their troops on the field. Whose the blame for these blunders it is hard to tell, but upon Field Marshal French falls the responsibility. Joffre has weeded out incompetent generals by the dozen. French should have done the same. But how could he when there was a shortage of officers of any kind?

By a magnificent effort of patriotism the British have raised an army of four million volunteers, but no effort of patriotism can provide them with trained leaders. The officers already in the service were not only too few but often unqualified for modern scientific warfare. The officers' corps had come to be regarded in England as a sort of social club for the sons of the rich and the titled classes, instead of a school of never ending study.

This defect in the British service had long before been noticed by military critics such as the late Lord Roberts and also by observant laymen such as H. G. Wells. On another page of this issue we quote an account by Wells of what might have been expected if the British troops went into battle under such officers as they had before the war, and we print in parallel column an account of what actually happened at Loos according to the German war correspondent, Kellermann.

Sir John, now Viscount French, was a dashing Irish cavalry officer; of the type of Sheridan rather than Grant. But trench-digging and long-range firing have antiquated the cavalry charge which used to inspire the painters and still arouses applause in the movies. The failure of French to cooperate effectively with Joffre on the one hand and with Kitchener on the other would alone justify his removal so long as these two men remain at the head of the French and British armies. Regardless of his merits, it is well that French is recalled and it would have been better—as we can now see—if he had been recalled long ago.

The British soldier is as brave and able as any in the world. Probably strategic genius is not rarer in the United Kingdom than elsewhere. But somewhere in the chain between the top and the bottom there is a weak link. French failed to find it. Let us hope that Sir Douglas Haig will be more successful.

SEEING THE LIGHT

A YEAR ago President Wilson received a delegation of women, who came to urge him to use his influence in behalf of a suffrage amendment to the Constitution, with a curtly polite negative.

Last week he promised a similar delegation to give the matter his best thought and to consult seriously with his colleagues in Congress.

The times are moving fast.

We congratulate Mr. Wilson on his new light.

SUFFRAGE AND FACTORY GIRLS

A LEADING religious paper in New York which is fiercely attacking woman suffrage and bitterly condemning the womanhood of the present day, gives prominent room to an article which charges that hundreds of thousands of young women have rushed into the factories because they despise the drudgery of housework in their parents' home or in domestic service. It declares that multitudes of women "who have never had to work or were supporting themselves by domestic service, rushed from the home. They were eager to do any work for the 'unjust male' for long hours and at a low wage rather than do housework for themselves or other women. They do not want to be servants, but ladies; they would rather toil in mill, factory or shop than do 'menial tasks.' The problem of domestic help as a consequence has become one of the most exasperating and imperative that a housekeeper and mother has to face."

How little the writer knows of the fact. These girls that rush to the factories are young things in their teens, hardly out of the grammar school. They have not run away from home. They have not resented household tasks, they have gone to the factory because they love their father and mother, their brothers and sisters and because home is the dearest place in the world for them. Before the day's work abroad is begun they are up early to help in the housework and they hasten home at night to wash and iron and mend, and have the comfort of their own homes, with their families and friends. They have gone out, as their young brothers have gone out, because their wages are needed to help pay rent and buy food and clothes for the household. They work hard on piece work and thousands of them carry home at the end of the week ten or a dozen dollars to a widowed mother for her support and that of the younger children. We know them and honor them for their love of the home God gave to them; all their money goes to their mother and she gives back to them what they need for personal expenses.

Of course they have not gone into domestic service. Why not? Because they love their home, another's home is not their home. To charge them with a lack of domesticity because they prefer to go out during the day and earn money to save their own home, rather

than to go out and work for strangers, without any home at all, with no mother, no brother or sister, where they are not treated as equals, this is a monstrous perversion of the facts. There are families in which the housemaid is treated with consideration and even love, and in which her place of work becomes a home; but how few are the cases in which the housemaid finds a home attractive enough to hold her for ten or twenty years.

Nor is it just to charge that these girls go to the factory because they do not wish to have a home of their own. The fact is that it is their desire and aim to leave the factory for a husband and a home, however humble. It is an unfortunate young woman among them who does not soon find herself attached to a young man whom she is looking upon as a possible husband. They know they stand a much better chance to get acquainted at home than at service; the home living room is much more attractive to desirable company than is the servant's kitchen, and the majority of mistresses do not desire that their maids should have "followers." For the sake of a prospective home of their own as well as for the enjoyment of their parents' home, working girls prefer the factory to domestic service.

The multitude of young women that crowd our factories present no argument against woman suffrage or against the decadence of the housewifely instinct or the loss of the feminine virtues. They are rather an emphatic declaration of women's love for their homes and so of the safety of giving them the ballot wherewith to protect the home.

THE PUZZLE OF PELLAGRA

ONE of the knottiest little problems which occupy the attention of the medical etiologist is that of the cause of pellagra. This curious disease manifests itself first in a reddening and roughening of the skin of the back of the hands and neck and later causes nervous and digestive disorders. It has long been known in parts of Italy, but is apparently a newcomer in this country, where it is spreading rapidly, especially in the South. Africa and South America have also been invaded by the disease.

Of course in such a case the first thought of the physician is to hunt for what the layman calls the "microbe," but which the bacteriologist, in the privacy of his laboratory, is most apt to call the "bug." Many investigators have thought they had found it, but have not been able to convince the others. The latest report of the discovery of the pellagra germ comes from Dr. B. W. Page, of Lumberton, North Carolina, who reports having observed in 600 cases "an actively and progressively motile cell-like body which rolls, turns somersaults, spins and darts across the field, but soon reaches a state of rest and later presents a beaded appearance." Such an athletic and versatile organism ought to be enough to account for the disease, but we must wait and see if other physicians find the same.

For while some are convinced that pellagra is due to some kind of a germ, others are equally positive that it is produced by an unbalanced diet or some particular food. Corn has been most suspected, especially moldy corn, or bolted cornmeal. It is the theory of Dr. Joseph Goldberger, of the United States Public Health Service, that pellagra is not a communicable disease, but is caused by a diet containing too much of carbohydrates and too little of protein, that is, mostly starch and sugar and not enough meat and milk. He has recently produced very convincing evidence in favor of his view by his experiments on eleven life prisoners in the Mississippi penitentiary who volunteered to take the test and were afterward pardoned by the Governor as a reward for their services to science. They were fed upon a diet of biscuits, fried mush, corn bread, sweet potatoes, rice, brown gravy, sugar and coffee. Three good meals of this, well cooked and as varied as possible, do not strike one as such bad fare; in fact, it is about what many people of that region live on from the cradle to the grave, and most of them don't get pellagra. But out of the eleven volunteers put on this ration six developed symptoms of pellagra within six months. From this Dr. Goldberger concludes that an unbalanced diet is the cause of pellagra; that the disease is neither infectious nor contagious and it can be cured or prevented by adding nitrogenous foods, such as fresh meat, milk, eggs, peas, beans and other vegetables. This conclusion has been confirmed by experiments in sanitariums and orphanages where pellagra used to be endemic but has been eliminated by a better balanced dietary secured by the increase of the nitrogenous element.

The yellow press writes up these experiments in the following absurd fashion:

> "I have been thru a thousand hells," sobbed a thin, gaunt man with glassy eyes and skin like parchment, as he staggered into a New Orleans hotel today.
>
> "Freedom is mighty sweet and I was willing to face death to secure it. But I believe I have paid in full for my crime. Nine months of torture, just think of it! Several of us tried suicide during the last few months, but we were watched night and day. At any time I would have gladly welcomed a bullet, but our guards only laughed when we attempted to escape."

Considering that there was no change in their diet during the first six weeks and that they were discharged within six weeks after the first reddening of the skin was observed and that "the nervous and gastro-intestinal symptoms were mild," it is hard to see where the "nine months of torture" comes in. And what about the millions of poor people who have to live in the "hell" of such restricted diet all their lives without the possibility of being pardoned out?

Their condition is indeed bad enough without any exaggeration by the yellow press and the only way to release them is by determining the cause of the malady to which they are liable. Dr. Goldberger's experiments, tho valuable, are not entirely conclusive and there is considerable evidence on the other side. Siler, Garrison and McNeal have been studying the cotton mill villages of Spartanburg, South Carolina, where pellagrins number 104 per ten thousand of the population. They have come to the conclusion that it is a specific infectious disease, for the disease spreads thru a household and to the near neighbors. They do not believe that the excessive use of cornmeal has anything to do with it and they find that the frequent use of milk and fresh meat does not prevent it. Whites are much more apt to contract the disease than blacks and women are more susceptible than men.

The facts that pellagra comes on in spring and summer and subsides in the winter and that it is often narrowly localized and that it is apt to appear upon the

hands and face, lead to the inference that it is due to a germ carried by some kind of an insect. Various insects are under suspicion, the stable fly and the buffalo gnat especially, but they have not yet been convicted.

And so the matter stands. When doctors disagree it would be rash for an editor to attempt to decide between them. We can only express the hope that the systematic researches now being carried on by the aid of public agencies and private philanthropy may soon solve the problem and so relieve humanity of this new scourge.

PLUCKING THE GOOSE WITH THE LEAST SQUAWKING

WHEN the income tax was enacted two years ago, it was so insignificant a burden on the vast majority of those who paid it that most of them told the truth in their declarations.

But now should the tax be increased, as the President proposes in order to put thru his preparedness program —the temptation to evade it will be very great. But the Government already has each man's sworn statement catalogued, and it will be very easy to inquire into the fiscal status of those whose new declarations disclose a smaller income than the old.

Thus the rich will find it practically impossible to shift their burdens under the more drastic law, and that is one strong point in favor of the new act.

WIVES FOR THE WOUNDED

THE rector and curate of St. Stephen's, Bristol, have advertised in the London *Times* for women who are willing to take as husbands the more or less crippled soldiers who are now coming back from France and Gallipoli in a continuous stream. It is proposed to establish a "League for the Marrying of Wounded Heroes," and the reverend originators of the plan argue for it in such language as this:

> The possibility that a man who has freely offered himself for his country has no alternative but to spend his broken life in grim untended loneliness or the gray depression of an institution is not to be tolerated. He is the very last who should be denied the shelter of a home and the joys of family life. Better for him otherwise if his days were ended on the field of battle. But there is hope. Maybe many noble-minded patriotic women will gladly give their lives and strength to ameliorate the conditions of such men, and that in the highest and best way, a consecrated marriage.
>
> Some of the best marriages have been those in which certain physical difficulties had seemed a barrier—lameness or armlessness or blindness, which has, however, not proved impossible to happiness. They were based upon high unselfishness and therefore lasting.

The scheme is well intentioned but unnecessary. On the basis of a half century of expensive experience we Americans can state with positiveness that this delicate matter can all be arranged without the aid of the clergy except of course in clinching the bargain. Only let the British Government pay such pensions as are deemed suitable by those most concerned, and then every veteran will on landing find himself beset by a bevy of sympathetic, charming and energetic ladies any one of whom will be only too glad to devote her life to his care. No soldier come from the wars is too old or ugly, none too crippled or battle-scarred, but that some woman will be found willing to wait upon his declining years and to extend them as long as possible.

MERCY AND JUDGMENT

THE German press is greatly surprized that both the English and the French are so much shocked at the execution of the English nurse Miss Cavell, who was convicted of the military offense of harboring certain Belgians and allowing them to escape the country. *The Kölnischer Zeitung*, one of the ablest and most representative of German newspapers, discusses at length the outburst of English indignation and says:

> If the English had shot a woman in similar circumstances, people in Germany would have regarded the victim as an heroic martyr, for nobody among us doubts that Miss Cavell acted from patriotic motives. But it would have occurred to nobody in Germany to make capital out of the matter, as evidence of the enemy's moral degradation. The difference in the way of thinking is explained by the difference of English and German views of justice—in a minor degree, no doubt, by the difference in views about woman's position.

The difference between the two cultures could hardly have been more clearly and frankly exprest. It has often been remarked—we remember very emphatically by Julian Hawthorne some years ago—that Germans pay no such respect to women as English and American courtesy requires; that it considers them not as something finer, not even as equal, but as markedly inferior; but it has not been so frequently remarked that German culture holds justice so sacred that it less inclines to mercy than is the case in Great Britain and America. We have suspected it, have seen evidence of that severity which prefers harshness to mercy, but that such is the German temper is here admitted on high authority. Our students in the German universities have not been pleased to see how ready their associates in the lecture room have been to take offense at a fancied insult which can be expiated only with a duel. It has seemed to them that in this German culture is a century behind the age.

Law is sacred but must not be, the English would say, too sacred. Mercy is even more sacred than justice. Mercy is the choicest attribute of God.

> "And earthly power doth then show likest God's,
> When mercy seasons justice."

The law is good, very good, but it is the balance of mercy and law, not the stringency of law alone by which we measure a nation's moral culture. Javert, the ideal of criminal law, is the most hateful of all Victor Hugo's characters. If it be true that Germans would not condemn the criminal execution of a German woman for a similar infraction of law, this would be evidence that Germany is a century behind the Christian conscience of the day. By going back a few centuries we can find similar crimes or worse committed in England under the pretext of law. In 1586 Margaret Clitherow was sentenced to a most cruel death for having harbored and maintained Jesuit and Seminary priests. She is counted among the martyrs of the church, and Miss Cavell's name will go down to history with that of Joan of Arc as martyrs of patriotism. It was a sad day for Germany when that blood was shed. It will be long remembered against Germany. The American Minister tried to save her at Brussels, but his plea was harshly refused and law allowed no delay. The Apostle James has pronounced judgment on those who condemned and slew her and on those who defend the crime. "He shall have judgment without mercy that hath showed no mercy; and mercy rejoiceth against judgment."

THE STORY OF THE WEEK

THE GREAT WAR

December 13—General de Castelnau appointed chief of staff under Joffre. The last of the Allies driven from Serbia into Greece.

December 14—Turks attacking British at Kut el Amara, Mesopotamia. 45 French aeroplanes drop bombs on railroad stations and works behind the German lines.

December 15—Sir Douglas Haig replaces Sir John French in command of British forces in France. Austria asks United States for evidence in "Ancona" case.

December 16—French Finance Minister states that France is spending $420,000,000 a month on the war. Italians continue bombardment of Görz.

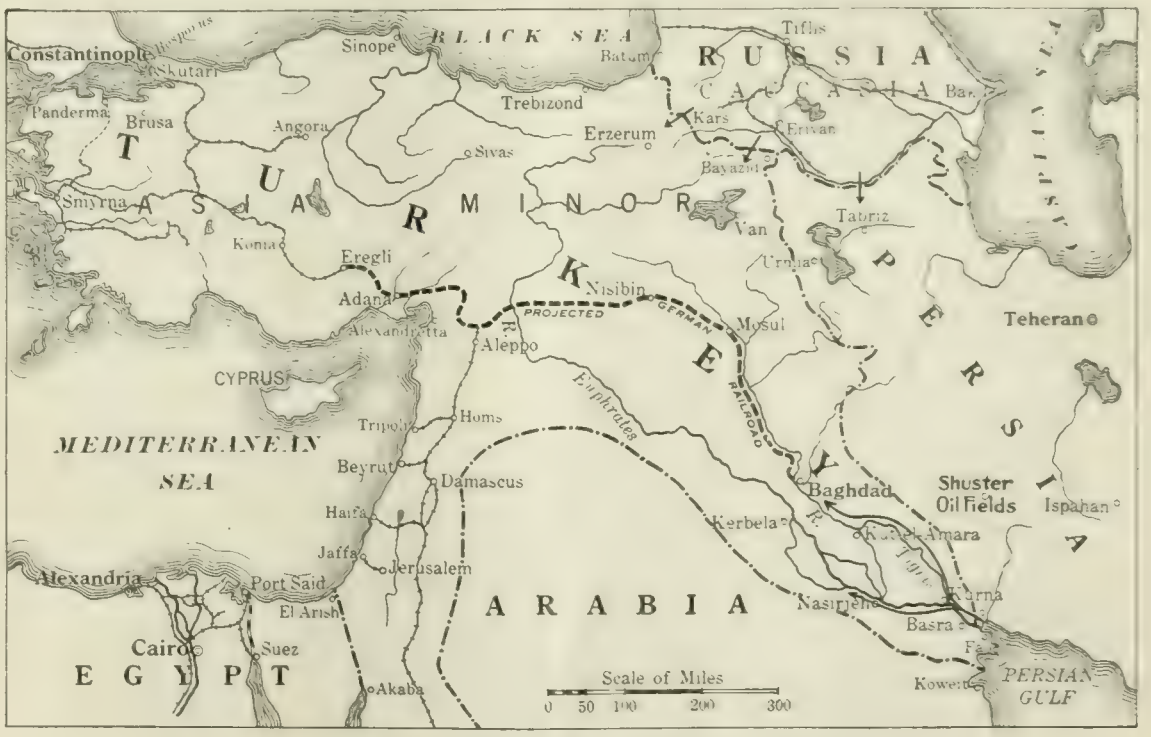
December 17—Russians take Hamadan, Persia. Italian troops shipped to Avlona, Albania.

December 18—Germany denies instigating lawlessness in United States. British prepare to defend Suez.

December 19—Allies fortifying Salonika. American reply to Austrian note forwarded.

The German Campaign in Asia

As winter comes on the storm of war quiets down in the north and the cyclone center moves southward. The opening of a road thru the Balkans has enabled the Central Powers to enter Asia and here, during the next few months, we may expect some important and possibly decisive developments. A regular railroad service has been already established between Berlin and Constantinople, two trains each week running in either direction in thirty hours. From Scutari on the Asiatic side of the Bosporus from Constantinople a railroad runs to a point north of Aleppo where it branches; one line running south to Jerusalem and the other east toward Bagdad. Obviously the first is directed toward Egypt and the second toward India. Both railroads have been improved and extended by German engineers during the past year and are now in a condition to despatch Turkish or even Austro-German troops to either front. The German papers announce with glee that a blow is soon to be struck "at the Achilles tendon of the British Empire." But at which point, Egypt or India? That is the question which is now puzzling the British Government and since they do not know where the blow is to fall they must protect both the Tigris and the Suez Canal. The Germans have, as we see, acquired in Asia the same strategic advantage they have had in Europe, the power of taking the offensive at will on interior lines.



The German Bagdad railroad is supposed still to lack about 150 miles of reaching Mosul on the Tigris and then there is 150 miles further down the river to go before Samarra is reached, which is connected with Bagdad by rail. But this gap of 300 miles, half land and half water transport, may soon be bridged if it has not already been. At any rate it is not impassable as the British last month found to their sorrow when the arrival of reinforcements under German leadership at Bagdad drove them back down the river for a hundred miles. They established themselves at Kut el Amara, doubtless occupying the elaborate system of fortifications which the Turks had constructed here and which the British had taken from them a few weeks before. In their retreat from near Bagdad the British lost several river steamboats and a train of 700 camels and the entire expedition is imperilled by the attacks which are being made on it by the Turks and Arabs from three sides. So far these attacks have been successfully repulsed and reinforcements from India and Egypt are being brought up from the Persian Gulf as rapidly as possible.

But now come rumors that a force of several hundred thousand Turks is being trained in Palestine by Field Marshal von der Goltz for an attack on Egypt. The railroad to Jerusalem is said to have been double-tracked and extended to the Egyptian frontier. From this point it would be possible to push on rapidly a light track road in the rear of the army as it advanced across the desert of Sinai to the Suez Canal. Such an expedition would have a much better chance of success than that which the British repelled last February. It is then no wonder that the Dutch steamship companies have announced their intention to send their vessels around the Cape of Good Hope henceforth rather than risk the passage of the canal.

Changes in British Command

Sir John French, who has been in command of the British army in France and Flanders ever since it landed in August of last year, has resigned that position and has been appointed commander in chief of the troops in the United Kingdom. As a reward for his services in the Great War the King has made him a Viscount.

This dignity, however, will not conceal the fact that the change is made in the hope of bettering the British fortunes on the continent. As we explain editorially in this issue, it is impossible to say in how far French is to blame for their lack of success, but it is quite likely that some one else may be more useful. For one thing there has for years been a personal feud between French and Kitchener and especially between their respective partizans in court and camp. This is said to have originated in the feeling on the part of French and his followers that Kitchener did not give him sufficient credit for what he did in the Boer War in 1900. It was his famous cavalry charge which broke the Boer lines and relieved the siege of Kimberley. General French led this charge in person with Douglas Haig, who now succeeds him in France, at his side. The Lancers galloped in long lines across the open field in the face of the Boer guns and yet not one of them was killed. Needless to say this is not the sort of tactics which can now be employed against the German

WHICH WAY WILL THE GERMANS STRIKE?

The Germans, now in communication with Constantinople, can carry the campaign into Asia by two routes by railroad lines which they have been actively pushing during the past year. The Syrian railroad leading down thru Palestine has been extended to the Egyptian frontier. The Bagdad railroad reaches nearly to the Tigris. The British force, which came up from the Persian Gulf, had, as the arrow indicates, arrived within a few miles of Bagdad when it was driven back to Kut-el-Amara, where it is now besieged. The Persian force under German officers, which is assembled at Ispahan, may attack their line of communications from the eastern side

trenches, with their entanglements and machine guns.

During the present war the antagonism between the French and Kitchener factions has been increased by mutual recrimination. French was blamed because the great advance promised by Kitchener in the spring failed to come off. French in self-defense dropt a hint to certain newspaper correspondents at the front that the failure was Kitchener's fault for not supplying the proper kind of shells, that shrapnel was useless against modern entrenchments. This being made known in England thru the Northcliffe journals in spite of the censorship led to a reform. The manufacture of shells was taken out of Kitchener's hands and Lloyd George, as Minister of Munitions, undertook the manufacture of the high explosive shells demanded. Even with these, however, the expected advance did not take place.

Viscount French is now sixty-three years old. He was born the same year as Earl Kitchener, now Secretary of State for War, and General Joffre, who has supreme command of all the French armies.

French, like Kitchener, is of Irish blood, tho his mother was Scotch. His father was a naval captain and he also entered the navy at fifteen, but changed to the cavalry when he came of age. He was in retirement when the war broke out on account of becoming involved in the Home Rule affair and making terms, without the knowledge of the Government, with the officers who refused to coerce Ulster.

Sir Douglas Haig, who now takes command of the British forces in France, is fifty-four years old, and has been French's right hand man both in the Boer War and this.

General Sir Horace Smith-Dorrien has been placed in command of an army for the conquest of German East Africa.

The Struggle for Salonica

In spite of the protest of the Greek Government against the fortification of Salonica by the Allies the work is being pushed forward with feverish haste. The city is protected on the land side by a close semicircle of hills. On these heavy artillery is being mounted and the soldiers and Serbian refugees and any other men who can be hired are kept at trench-digging, night and day. The Anglo-French authorities have taken possession of all the railroads, yards and stations of this part of Greece for military purposes. They have also assumed control of the Greek customs at this port.

The first line of defense is established about twenty miles north of Salonica, which is half way to the Serbian border. Beyond this the French and British, in their retreat, laid waste the country and tore up the railroad and destroyed the tunnels and bridges so as to check the advance of the enemy. The Greek Government has finally consented to the demands of the Allies and withdrawn its troops from the prospective war zone.

So far none of their pursuers have crost the boundary into Greece, but it is said that an army of 200,000 Germans, Austro-Hungarians and Bulgars are assembling on the frontier for an invasion of Greece. Eight batteries, each composed of three 7½ inch guns, have reached Sofia for use in the attack on Salonica which, it is expected, will soon occur.

The election for the Greek Parliament took place on Sunday, December 19, part of the army being demobilized in order that the soldiers might return home to vote. Ex-Premier Venizelos, who was dismissed from the Government by the King because he favored joining the Allies, advised his followers not to take part in the election, realizing that he could not hope to prevail against the King.

The Bulgarian people are joyful over the conquest of Serbian Macedonia and the redemption of the Bulgars in this region, for which Bulgaria has fought three wars within three years. The Germans, too, regard the expulsion of the French and British from the Vardar valley within ten days as one of their greatest exploits in the war. The hights and passes of this region were, according to the Berlin report, occupied by 97,000 French and 75,000 British with 600 field guns, 130 mountain guns and 80 heavy howitzers. "The French fought much more bravely than the British." "Two British divisions were

THE EVASIVE AUSTRIAN NOTE

IN reply to the much esteemed note, No. 4167, which his Excellency Mr. Frederic Courtland Penfield, Ambassador Extraordinary and Plenipotentiary of the United States of America, directed to him in the name of the American Government under date of the 9th inst., and in the matter of the sinking of the Italian steamer "Ancona," the undersigned, preliminary to a thoro, meritorious treatment of the demand, has the honor to observe that the sharpness with which the Government of the United States considers it necessary to blame the commanding officer of the submarine concerned in the affair, and the firmness in which the demands addrest to the Imperial and Royal Government appear to be exprest, might well have warranted the expectation that the Government of the United States should precisely specify the actual circumstances of the affair upon which it bases its case.

As is not difficult to perceive, the presentation of the facts in the case in the aforesaid note leaves room for many doubts, and even if this presentation were correct in all points and the most rigorous legal conception were applied to the judgment of the case, it does not in any way sufficiently warrant attaching blame to the commanding officer of the war vessel or to the Imperial and Royal Government.

The Government of the United States has also failed to designate the persons upon whose testimony it relies and to whom it apparently believes it may attribute a higher degree of credibility than to the commander of the Imperial and Royal Fleet. The note also fails to give any information whatsoever as to the number, names, and more precise fate of the American citizens who were on board of the said steamer at the critical moment.

Moreover, in view of the fact that the Washington Cabinet has now made a positive statement to the effect that citizens of the United States of America came to grief in the incident in question, the Imperial and Royal Government is in principle ready to enter into an exchange of views in the affair with the Government of the United States. It must, however, in the first place, raise the question why that Government failed to give juridical reasons for the demands set forth in its note with reference to the special circumstances of the incriminating events upon which it itself lays stress, and why in lieu thereof it referred to an exchange of correspondence which it has conducted with another Government in other cases.

The Imperial and Royal Government is the less able to follow the Washington Cabinet in this unusual path since it by no means possesses authentic knowledge of all of the pertinent correspondence of the Government of the United States, nor is it of the opinion that such knowledge might be sufficient for it in the present case, which, in so far as it is informed, is in essential points of another nature than the class of cases to which the Government of the United States seems to allude. The Imperial and Royal Government may, therefore, leave it to the Washington Cabinet to formulate the particular points of law against which the commanding officer of the submarine is alleged to have offended on the occasion of the sinking of the "Ancona."

The Government of the United States has also seen fit to refer to the attitude which the Berlin Cabinet assumed in the above mentioned correspondence. The Imperial and Royal Government finds in the much esteemed note no indication whatever of the intent with which this reference was made. Should, however, the Government of the United States thereby have intended to express an opinion to the effect that a prejudice of whatever nature existed for the Imperial and Royal Government with respect to the juridical consideration of the affair in question, this Government must, in order to preclude possible misunderstandings, declare that as a matter of course, it reserves to itself full freedom of maintaining its own legal views in the discussion of the case of the "Ancona."

In having the honor to have recourse to the kindness of His Excellency the Ambassador of the United States of America with the most respectful request to be good enough to communicate the foregoing to the American Government, and on this occasion to state that the Imperial and Royal Government, to no less degree than the American Government, and under all circumstances, most sincerely deplores the fate of the innocent victims of the incident in question, the undersigned at the same time avails himself of this opportunity to renew the expression of his most distinguished consideration to his Excellency the Ambassador. [illegible]

FRENCH SOLDIERS DRAWN BY A SOLDIER-ARTIST

"En repos, Ville aux Bois, 23 Avril, 1915"—Resting in the City in the Wood. The work of M. Lambrecht

annihilated" and a large number of prisoners and guns were taken. The British give out a quite contradictory version. According to this, the losses of the Allies were small considering that they were outnumbered ten to one, and they retreated in good order, driving before them all the castle and sheep in this part of Serbia and "absolutely denuding the country of everything valuable to the enemy." Instead of "two divisions," that is, 40,000 men, which were destroyed it was two companies of an Irish regiment, the Inniskillings, who sacrificed themselves to save the army. Tho armed only with rifles and short of ammunition they held the crest of a hill in the second line all one morning against a heavy bombardment and repeated charges by the Bulgars until the third line could be strengthened behind them. "Hardly a man of them escaped."

Italy has sent a force across the Adriatic to Avlona in order to rescue the Serbian army which has taken refuge in Albania. Avlona is one of the ports which Italy desires to annex and it has been occupied by a garrison of Italian troops since the war began.

German Plotters Arrested

Charged with having plotted in this country the destruction of the Welland Canal in Canada, Paul Koenig, R. E. Leyendecker and Frederick Metzler were arrested in New York, last week, and held for trial, the penalty for such an offense being three years in prison. Koenig, heretofore known as the Hamburg-American Steamship Company's Chief of Police at our Eastern ports, is believed to be the head of Germany's secret service here. Leyendecker, a naturalized citizen and a merchant, accompanied Koenig when the latter, at Buffalo and elsewhere, was making plans for destroying the locks of the canal. This waterway, eighty years old, and constructed at a cost of $27,000,000, connects Lake Erie with Lake Ontario and all transatlantic trade from the great lakes passes thru it to the St. Lawrence River. Metzler was Koenig's stenographer. For three months Federal detectives had been watching and following Koenig, who used no less than thirteen aliases in his plotting. The papers seized when he was arrested contain the names of nearly 100 men, who are said to be his agents.

A day or two later, Frederick Schleindl, an audit clerk in the foreign department of the National City Bank in New York, the greatest of our banks, was arrested for stealing dispatches from the Allies relating to shipments of munitions and giving them to agents of Germany. He has been in this country three years and a half, and he entered the service of the bank in October 1914. He virtually admitted his guilt, saying that he had been moved by patriotism. He also admitted, however, that he had received $400 for the dispatches. John Zwoboda, formerly employed at the works of the Du Pont Powder Company, in New Jersey, has been arrested because it is thought that he may have caused the explosion on November 30 that killed thirty-one men. Nitro-glycerine, dynamite and other explosives were found in his rooms.

In San Francisco there have been several arrests and indictments which involve the German Consulate. Among those indicted are Baron George von Brincken, an attaché of the consulate, and Charles C. Crowley, a detective employed by the German Consul, Franz Bopp. It appears that Crowley supervised a series of explosions in Pacific ports and at powder factories in California, Indiana and Michigan. Supplies about to be shipped to Russia by way of Vladivostock were destroyed at the ports. The powder factories were at work on war orders. Much evidence was furnished in the confessions of Johannes Koolbergen and Louis J. Smith, whom Crowley employed and who received from him considerable sums to pay for their work. Koolbergen was hired to blow up the bridges and tunnels of the Canadian Pacific road.

The German Denial

On account of the accusations of German interference in American affairs the German Government has issued a general repudiation of all such charges. The statement calls attention to the impossibility of keeping in touch with American sentiment and the unreliability of the information it receives from this country since the German

THE WANING OF THE WAX WORKS

Auctioning off the million dollar glories of the long-famous Eden Musée, in New York, which has finally past away, done to death by newer thrills. Queen Victoria, jostled here by Coney Island, movie and dime museum buyers, was bundled out together with the Colonel, Washington, Lincoln, Wellington, Napoleon, Julius Cæsar and half a dozen other great ones for $230; twenty-six rulers of the world were sold for $23 apiece; and Governor Whitman fetched only $7

Government has no channel of confidential communication even with its own embassy.

Messages by cable must pass thrū the English censorship and messages in secret code by wireless are forbidden. Therefore misunderstandings are bound to arise, while explanations are often so circumscribed or belated as to be not wholly effective.

Apparently the enemies of Germany have succeeded in creating the impression that the German Government is in some way morally or otherwise responsible for what Mr. Wilson has characterized anti-American activities, comprehending attacks upon property and violations of the rules which the American Government has seen fit to impose upon the course of neutral trade. This the German Government absolutely denies. It cannot specifically repudiate acts committed by individuals over whom it has no control and of whose movements and intentions it is neither officially nor unofficially informed. It can only say, and does most emphatically declare to Germans abroad, to German-American citizens of the United States, to the American people, all alike, that whoever is guilty of conduct tending to associate the German cause with lawlessness of thought, suggestion or deed against life, property and order in the United States in in fact an enemy of that very cause and a source of embarrassment to the German Government, notwithstanding anything he or they may believe to the contrary.

Labor Questions

A strike which threatened to delay all railroad freight in the vicinity of Chicago, and which had the support of the three great railroad brotherhoods, or unions, was settled on the 17th, and the adjustment was due mainly to the work of G. W. W. Hangar, representing the Federal Board of Mediation and Conciliation. The strikers were employees of the Belt Line, at Chicago, which handles and transfers thousands of freight cars daily for the seventeen lines which enter that city. Much of their work is done at a suburban place named Clearing, where there are few dwelling houses, and the dispute related to the trains by which the company carried them to and from their homes, two or three miles away. Before a settlement was reached, 15,000 loaded cars were tied up. The three brotherhoods have $11,000,000 in their treasuries, and their officers exprest a willingness to use all of this money in the contest. For a time there was a deadlock, and some expected that all the seventeen railroads would be involved. In the settlement the company agrees to provide eight trains a day for the men.

There are indications that the strike of garment workers in Chicago, now three months old, in the course of which two persons have been killed and more than 1000 arrested, will soon be adjusted, and that the strikers will gain nearly all that they sought. But there may be a national strike of 70,000 makers of shirtwaists early in the coming year, for higher wages, as meetings relating to it have recently been held in several cities. There may also be, on or about May 1, a national strike of railroad workmen for an increase of wages and a reduction of hours. Union employees in the West recently consented to join those of the East and South in such a movement. In New York City 8000 waiters have been on strike for recognition of their union and an increase of 30 per cent. with a ten-hour day. About 200 restaurants have yielded, and 1500 of the strikers have been successful. Many foundries in the Pittsburgh district are idle, owing to a strike of iron molders for eight hours.

The Eastman Kodak Company will give $1,000,000 to its employees who have been in the service one year, as an annual wage dividend. Each is to receive 3½ per cent of his annual pay, up to five years, and 8000 of the 11,000 employees are entitled to the dividend. The Crane Company in Chicago is to distribute about $700,000 among its employees of six months' service, and the Scovill Manufacturing Company, of Waterbury, Connecticut, which recently increased wages, will give a bonus of 10 per cent. In the same city a branch of the International Silver Company, which recently was disturbed by a strike, is to increase wages by 10 per cent and reduce the week from 60 to 55 hours.

War Taxes for Another Year

The Democrats of the House held a caucus to consider the proposed extension of the emergency tax law for one year. It was to expire on December 31. There were only two members who declined to be bound by the caucus decision, which was in favor of extension. When the joint resolution for extension was laid before the House, the committee explained that when the law was enacted, Congress did not expect that the war would be such a long one. But the end was not yet in sight, and our imports, with the duties, had been decreased on account of it. On the 16th the joint resolution was passed by a vote of 205 to 189. All the Republicans opposed it, and with them were five Democrats—Hilliard and Keating, of Colorado; Callaway, of Texas; Wingo, of Arkansas, and Buchanan, of Illinois. On several preliminary motions the margin was a narrow one, and the motion to recommit was defeated by a majority of only eight. Mr. Kitchin, the floor leader, said that failure to pass this resolution and to repeal the law making sugar free of duty after May 1 would cause a deficit of $81,000,000, while the action proposed in both cases would reduce the deficit to not more than $6,000,000.

The debate in the House and in the Senate on the following day was of a partizan character, relating mainly to the tariff policies and legislation of the two great parties. Republicans in the House asserted that the Government would not have needed these taxes if the Payne-Aldrich tariff had been retained. Mr. Cannon, formerly Speaker, had something to say about Democratic extravagance. In the Senate, where the extension was ordered by a party vote of 45 to 29, the chief speakers were Mr. Underwood, recently Democratic leader in the House, and Mr. Penrose of Pennsylvania. Mr. Underwood earnestly defended the present tariff law with which his name is connected. At the end of the week Congress adjourned for the holiday recess, which will end on January 4.

The President's Wedding

President Wilson and Mrs. Edith Bolling Galt, widow of Norman Galt, the daughter of the late William H. Bolling, of Virginia, were married on the 18th, in the evening, at

the bride's residence in Washington. The ceremony was performed by the Rev. Herbert Scott Smith, rector of St. Margaret's Episcopal Church, in which Mrs. Galt is a pewholder, assisted by the Rev. James H. Taylor, pastor of the Central Presbyterian Church, which the President usually attends. Extreme simplicity had been sought and all display, official or otherwise, was avoided. There were about forty-five guests and nearly all of these were relatives of the President or of Mrs. Galt. There were no representatives of the diplomatic corps and only one Cabinet officer, Secretary McAdoo, who was present because he is Mr. Wilson's son-in-law. The floral decorations were elaborate and very beautiful, but there was no music, until a little was heard from a concealed orchestra after the ceremony. There were no bridesmaids or flower girls. Many gifts had been received from Cabinet officers, members of Congress and Ambassadors, but no list of them was given to the public.

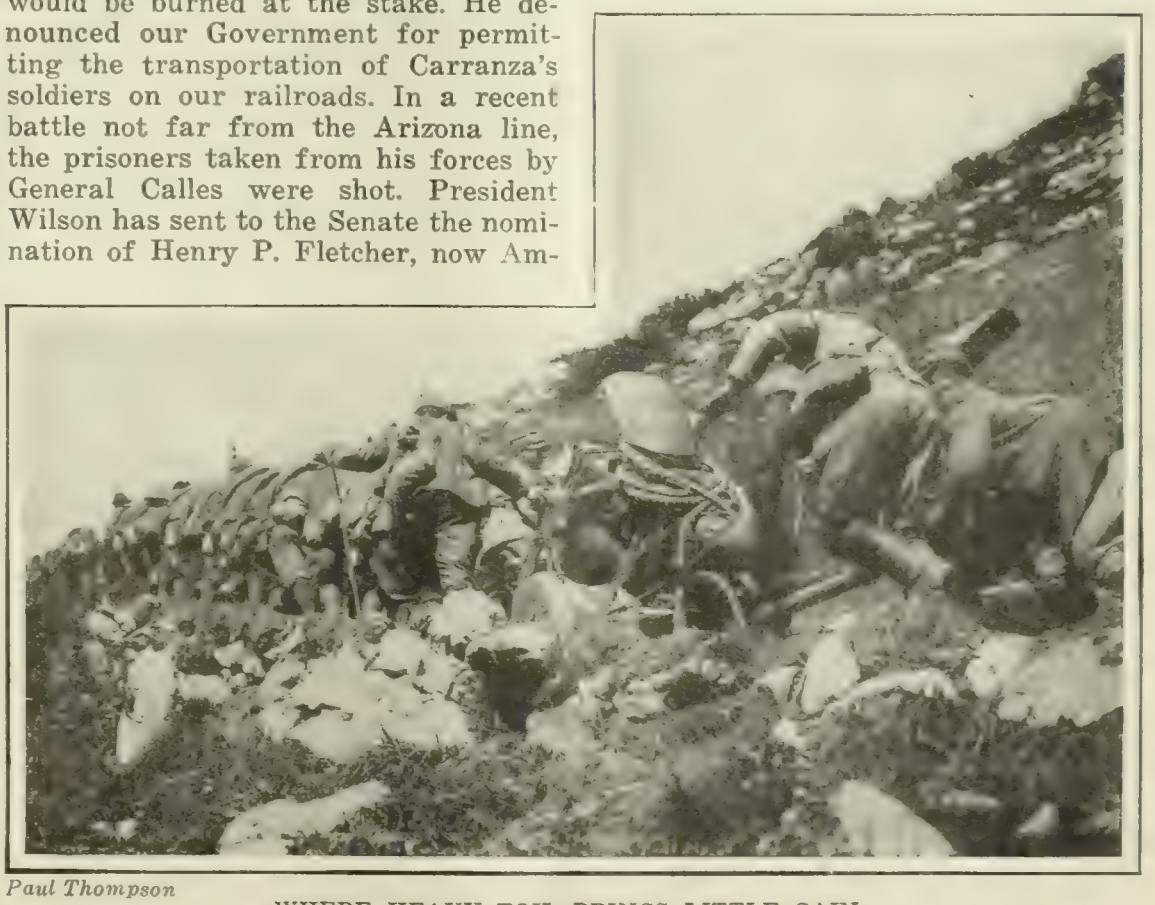
At a little before 10 o'clock Mr. and Mrs. Wilson left the house, and at 11:15 p. m. they started in a private car for Hot Springs, Virginia, where they intended to remain for two weeks.

New York's Public Service Commission

Since the removal from office, by Governor Whitman, of Edward E. McCall, chairman of the Public Service Commission whose territory is the southern part of the State of New York, the Thompson Legislative Committee, which asked for the removal of McCall, has taken testimony in which another member of the commission, Robert Colgate Wood, is accused of demanding and receiving bribes. This testimony has been laid before a grand jury, and the indictment of Commissioner Wood is expected. Walter D. Uptegraff, president of the Union Switch and Signal Company, testified that in the summer of 1914, he then being a vice-president, a bribery proposition from Wood was laid before a meeting of the company's board by Vice-President Sidney G. Johnson and the president, Colonel Henry G. Prout. It was rejected, and as a result of what took place at the meeting both Prout and Johnson were forced to resign. Johnson, now vice-president of the General Railway Signal Company, testified that Wood sent for him and said to him that for his influence and vote with respect to a pending contract which would give the company $200,000 for placing its signals on the Center street loop of the New York subway he ought to receive $5000. This was the proposition which came before the board. There was testimony that $1500 had been paid to Wood in connection with a signal contract for another railway.

Johnson had been with the Union Company fifteen years. According to his story, Colonel Prout said there must be no quarrel with Wood, but that negotiations should be continued. Colonel Prout himself testified that he had not felt like taking the responsibility of losing the contract or of paying the bribe, without authority given by the board. S. O. Levinson, counsel for the company, testified that at the board meeting both Johnson and Prout were anxious that action be taken at once because they had promised to pay to Wood the $5000. It was for this reason that they were compelled to withdraw from the company. The committee is also inquiring about a contract for about $1,500,000 which was awarded to the General Signal Company after Johnson had become vice-president of that corporation, altho the bid of the Federal Company was lower by $117,000. Alfred Renshaw, president of the Federal Company, testified that his vice-president, John T. Cade, told him that a former business partner of Commissioner Wood had assured him that for a "consideration" he could get this contract.

Wood asserts that the testimony of Uptegraff and Johnson is untrue. The punishment for the offense in question is ten years imprisonment, or a fine of $5000, or both.



Villa Gives Up the Fight

Villa has decided, late reports from Mexico say, to give up the fight and leave the country. The officers under his command are discouraged and ready to accept Carranza's offer of amnesty. He calls them traitors. He has recently had about 4000 soldiers with him, and there were 2000 at Juarez. If he is permitted to live quietly in the United States, he says, he will cross the line; if not, he will go to Europe. There are reports that he has been engaged for a lecture tour in this country. Before he decided to quit, he and his forces had been pursuing a lawless course. In Madera, at the Pearson works, he demanded $250,000 and held thirty Americans for ransom. Those who refused to pay, it was announced, would be burned at the stake. He denounced our Government for permitting the transportation of Carranza's soldiers on our railroads. In a recent battle not far from the Arizona line, the prisoners taken from his forces by General Calles were shot. President Wilson has sent to the Senate the nomination of Henry P. Fletcher, now Ambassador to Chile, to be Ambassador to Mexico.

Monsignor Kelley, president of the Catholic Church Extension Society, and other prominent Catholic clergymen, have complained to the State Department that Carranza is not faithful to his agreement concerning Catholics. They have submitted evidence that race and religious decrees have been issued by Carranza Governors, and that the Governor of Yucatan has ordered all Catholic priests to marry and to work eight hours a day in the public offices; also that the university in Guadalajara has been closed, that the sacrament of penance is prohibited in Morelos, and that in several places the priests are required to wear peons' blankets.

Carranza has given notice that all acts, contracts, or concessions of the Huerta and Conventionist Governments are nullified, and those holding such concessions must apply again for them. His Minister of Finance will seek a loan of $50,000,000 in New York. At the Mexican capital there is an epidemic of typhus fever, with heavy mortality, and many deaths from starvation are reported. Considerable quantities of corn have been received, but officers of the Carranza Government, it is asserted, demand very high prices for it, in order to gain large profits for themselves.

By President Carranza's order, there are new and severe sanitary regulations, on account of the typhus, and the sale of intoxicating liquor is absolutely prohibited. The Carranza official newspaper recently announced that the head of General Juan Hernandez had been sent, as a Christmas present, to General Gonzales, commander at the capital. Hernandez, the father-in-law of one of Huerta's daughters, and formerly associated with Porfirio Diaz, was recently killed at Esperanza.

WHERE HEAVY TOIL BRINGS LITTLE GAIN

Italian artillerymen dragging guns into position over a difficult mountain trail. The Italians are well fitted for the new expedition thru mountainous Albania

FROM STATE TO STATE

ALABAMA: After a long fight for the establishment of dipping vats to rid Alabama cattle of ticks, State Veterinarian Cary and those who have aided him are jubilant over the recent releases from quarantine. The cost of dipping cattle in this state has ranged from less than 30 cents to about 55 cents a head, but cattle from the released sections are bringing $10 a head more than those in the quarantined districts. In a corner of one county the opposition to vats was so bitter that, when the county as a whole had voted overwhelmingly to establish them, that corner destroyed with dynamite all that were built there. The December releasing order frees the cattle of all that county except this corner.

ARIZONA: More substantial progress is now being made in the mining industry of this state than ever was known here before. Nearly all the old mines are increasing their output, and capital is rapidly coming in from outside for the development of new properties. Permanent building operations in the established sections have doubled and steady growth in population has followed. The confidence of operators has never been greater, but there is no indication of the old-time boom founded principally on expectation and imagination.

CALIFORNIA: The subject now uppermost in the minds of California people is the Federal Government's suit to dissolve the merger of the Central Pacific and Southern Pacific railroads. The prevailing opinion in the state seems to be that the chief result of separating these roads will be increased cost for poorer service to the public. The recent divorcing of the Union Pacific from the Southern Pacific has resulted, it is said, in no reduction of fares or freights, but has greatly increased the inconvenience of shippers and reduced the financial power of the companies to extend and increase their service.

COLORADO: Last year the Colorado Springs Chamber of Commerce conducted an advertising campaign in national magazines, setting forth the Pikes Peak region as an all year vacation resort. Tabulated returns show so many visitors attracted by this advertising that a similar campaign is to be made this winter and next spring. Thousands of persons on their way to and from the California expositions were tempted by the advertisements to stop at Colorado Springs, and a large number of them declared their intention of coming again for longer visits.

CONNECTICUT: Never before in its history has this state been so busy as it is now. Labor troubles have not quite ceased, but the few that remain are inconsequential. Nearly every city reports that practically all its industries are running either full time or overtime, and many of them tell of large increases in floor area devoted to manufacturing, the employment of enlarged forces of workmen and the output of record volumes of product. Working hours are shorter and wages higher than they ever have been before.

DISTRICT OF COLUMBIA: The largest plant in the world for aeronautical experiments is at the Washington navy yard. It is known as the wind tunnel, and was worked out by navy designers. It is practically a big wooden box in which an eighty-mile gale can be created and its effect upon the planes of a proposed aircraft can be weighed to within 1/2000 of a pound. A huge weight-carrying biplane is soon to be constructed at the navy yard on data gathered from the tests made in this wind tunnel.

KANSAS: The secretary of the Kansas Board of Agriculture has just completed the tabulation of the egg and poultry sales of the state as reported by county assessors. It shows that these sales amounted to $11,761,798 in the last year. This does not take into account the poultry and eggs used by the farmers themselves or the thousands of backyard flocks kept by city dwellers. Kansas won more than forty first prizes in the poultry show at the Panama-Pacific Exposition, in which there were upward of 8000 entries.

LOUISIANA: This state has the distinction of leading all others in percentage of illiterates. Last year the Legislature enacted a law authorizing compulsion of attendance at the public schools in the rural districts and making it a matter of local option. As yet no parish has done more than approve the plan, but now it is said Calcasieu is to make an experiment in order to ascertain by actual experience whether compulsory attendance is a good thing.

MAINE: The lobster industry is one of the most important in this state. To protect it there is a state law providing for lobster wardens and giving them the right to search fishing vessels suspected of having short lobsters on board. The captain of a Boston smack recently refused to let a warden board his vessel. He was subsequently arrested and found guilty by a lower court. On appeal the matter is now in the hands of the Law Court, whose decision will be final. It is believed that if the law is held to be unconstitutional the Maine industry will be ruined by the Massachusetts smackers.

MARYLAND: The method of handling coal at the $1,500,000 Baltimore & Ohio coal pier just contracted for at Curtis Bay is said to be radically different from any now in use on the Atlantic seaboard. The new pier, which will be 700 feet long and 115 feet wide, will be only eight feet above mean low water. The coal for export will be stored and classified in the yards at Curtis Bay, which will be increased to a total capacity of 4000 cars. From the storage yards loaded cars will be run over the car dumpers, of which there will be two, each capable of handling forty 100-ton cars per hour, and then on to the "empty" yard. The coal will be dumped into counterbalanced bins to prevent breakage, and thence fed thru hoppers to belt conveyers. There will be four movable loading towers with cages that can be raised and lowered a maximum of twenty-seven feet.

MASSACHUSETTS: At the recent state election a constitutional amendment was adopted empowering the commonwealth "to relieve congestion of population and to provide homes for citizens." Now the State Homestead Commission is preparing to go before the Legislature in January with plans for carrying out this purpose. It will recommend the purchase of a tract of land near one of the larger manufacturing centers with a view to dividing it into house lots with garden plots of good size. This will be used somewhat experimentally in the hope of learning how best to attract city families to the country. The commission also hopes to establish city classes for instruction in some phases of agriculture as a preliminary, and perhaps an encouragement, to removal to the country.

NEVADA: With silver as one of its most important products, Nevada is looking forward to an era of unprecedented prosperity. On all sides one hears the argument that silver must soon go to a higher price and then remain there a long time, since gold will be eagerly sought by practically every nation on earth in its effort to maintain or reëstablish its credit. Therefore, it is argued, every such nation will need silver both to replace gold withdrawn from circulation and to tempt gold from its hiding places.

MINNESOTA: The attorney for the Minnesota Brewers' Association has opened an entirely new question in the litigation started by the association in the Federal courts to set aside the treaty of 1855 under which liquor is excluded from the Indian reservations in northern Minnesota. He says the treaty is invalid because it attempts to legislate in a way not provided for by the constitution, since no action on it was ever taken by the lower house of Congress. This question was not raised in the former litigation, which ended in 1913, when the United States Supreme Court affirmed the right of W. E. "Pussyfoot" Johnson to seize and destroy liquor found within the treaty limits. With this new point the association's attorney hopes to make the country's highest tribunal reverse itself.

NEW YORK: The prodigious accumulations of freight at the railroad terminals of New York Harbor resulted some time ago in refusal by many of the roads to accept certain classes of export freight for this port, but it was only recently that the embargo extended to any classes of domestic freight. Some of the roads refuse all export freight, excepting that consigned to foreign governments. This exception is made, they say, because governmental freight does not accumulate here, since the foreign governments can commandeer any vessels flying their flags either in this port or elsewhere. But coastwise vessels and even harbor facilities for domestic freight movement are wanting here.

NORTH CAROLINA: A case involving the constitutionality of the so-called quart liquor law has been decided in favor of the law by the Supreme Court of this state. Judge Allen, writing the opinion, held that the Southern Express Company was within its rights in declining to deliver from another state to a citizen of North Carolina more than a quart of liquor at a time or to deliver quarts at shorter intervals than the fifteen days provided for by the law.

TENNESSEE: The commission appointed to establish a state vocational school for girls in Tennessee has received offers of land and substantial contributions toward the erection of buildings from many different cities which bid for the school. The Board of Control, which has charge of all state institutions and lands, has not yet decided which of these cities is to have it, but the school is assured to the state.

WEST VIRGINIA: Delegates from the several local charitable and correctional associations of the state recently held a conference at Wheeling—the first ever held in the state—and, after three days of discussion, decided to organize the West Virginia Charities and Correction Conference. The purpose is to unify the work of the various associations having the same general objects in view. Many faults in both the state laws and the practises of courts were pointed out. The new organization hopes that thru the added influence which concert of action will exert it will be able to remedy many of these defects.

WYOMING: Governor Hadley has appointed a committee to act with a similar committee from Nebraska to investigate the feasibility of running a pipe line from the Wyoming oil fields to Omaha. The project as outlined by a joint resolution adopted by the last Nebraska Legislature is for a line with a daily flow of 10,000,000 gallons to start at Casper, Wyoming, and follow the Platte River, with a tax of six and one-half cent to the mile the cost not to exceed $8000 a mile. The distance is about 400 miles. It is proposed that the people of the two states build, own and operate the line.

CAN WE AFFORD PREPAREDNESS?

BY WILLIAM GIBBS McADOO

SECRETARY OF THE TREASURY

THE question of the national finances is so intimately related to other vital problems which must be settled in the interest of the American people, that every right-minded citizen should want the truth in order that he may help form that intelligent public opinion out of which alone can arise sound and just conclusions. With this in mind, and in view of the many inaccurate and misleading statements which are being made, either deliberately or ignorantly, about the condition of the Treasury and the finances of the Government with respect to the current fiscal year and the fiscal year 1917, I feel that a true and accurate analysis of the situation may be of service to the public.

We began the fiscal year 1916 with a General Fund balance, not including amounts to the credit of disbursing officers, of $104,170,105.78. Under existing law the present duty of one cent per pound on raw sugar ceases May 1, 1916, and the present emergency revenue law expires on December 31 next. Assuming that these two sources of revenue are, and they ought to be, continued, the estimated total receipts for 1916 are $726,365,500. The total estimated disbursements for 1916, excluding Panama Canal payments, are $716,891,000, leaving a surplus or balance on June 30 next of $113,644,605.78. It may be assumed that there will be appropriated by the Congress for supplemental estimates and deficiencies for the same year the sum of $12,000,000. Panama Canal payments for 1916 are estimated at $25,000,000. These, under existing law, may be paid by the sale of bonds. If paid, however, out of current revenues, the amount must be deducted, leaving, on this basis, an available balance at the end of fiscal year 1916 of $76,644,605.78.

Now let us consider the fiscal year 1917, which we begin with a balance in the Treasury of, as shown in the foregoing paragraph, $76,644,605.78. Assuming again that present emergency revenue taxes and duties on raw sugars are continued, the total estimated receipts will be $730,500,000, giving a total for 1917 of $807,144,605.78. The total estimated disbursements, excluding Panama Canal payments, but including $93,800,000 new or additional expenditures for greater national defense or preparedness, amount to $832,951,000, leaving a deficiency, in 1917, of $25,806,324.22.

© Pach

SECRETARY McADOO

Estimated deficiencies and supplemental appropriations for 1917 will amount to $12,000,000, to which must be added a working balance in the Treasury to begin fiscal year 1918, of $50,000,000 and an additional $25,000,000 for Panama Canal payments if these must be paid out of the revenues. On this basis the total new revenue to be raised for the fiscal year 1917 is $112,806,394.22.

If, however, the Panama Canal payments for the years 1916 and 1917, amounting to a total of $50,000,000, should be paid from the proceeds of bond sales, then the amount of additional revenue which must be raised for the fiscal year 1917 is estimated to be $62,806,394.22.

It would not be an unusual thing to finance the Panama Canal payments by the sale of Government bonds; in fact, $138,600,869.02 of Panama Canal payments have been met by the sale of such bonds, twice during the administration of President Roosevelt and once under the administration of President Taft.

Under the present administration all payments for the Panama Canal have been made out of current revenues, amounting since March 4, 1913, to date, to $87,036,818.20. There is no necessity, in my opinion, for the issuance of bonds, notwithstanding the continuance of the European war and its inevitable effects upon the revenues. I believe that it would be far preferable to continue to pay the expenditures for the Panama Canal out of current revenues, especially since the Canal is almost completed and it is likely that the demands upon the Treasury from that source will largely decrease in the near future. If the policy is adopted of providing sufficient revenues to cover the Panama Canal payments, as well as all other demands upon the Treasury, it will probably be broad enough to take care of any ordinary fluctuations in the revenues and expenditures of the Government in the future.

If bonds are not issued for Panama Canal payments, therefore, the total amount of new revenue required for the fiscal year 1917—assuming, as before stated, that the present duty on sugar and the present emergency revenue taxes are continued—is $112,806,394.22, in which is included the sum of $93,800,000 for preparedness or new measures for the national defense. This amount can easily be raised by internal taxation without appreciable burdens upon the American people. The resources and wealth of the country are so great and are increasing so rapidly that the needs of the Government for its normally growing expenditures and for the carrying out of the larger program for national defense can readily be met.

Merely as suggestions I would say that consideration may well be given to increasing the rates of taxation on individual and corporate incomes and of reducing the exemption under the present law of $3000 for single and $4000 for married persons to $2000 and $3000 respectively. The surtax could begin at $10,000 or $15,000 instead of $20,000, as provided at present. In addition to any increases that may be made in the corporation and individual income taxes, a tax could be imposed on such products as gasoline, crude and refined oils, horse power of automobiles and other internal combustion engines, and various other articles not necessary to mention. These taxes would be widely diffused and scarcely felt. Certainly the nation is willing, when it is able to do so, to raise by taxation the amount needed for such a vital purpose as national preparedness and defense.

It is, of course, the function of the Congress to determine what revenues shall be raised and how, and these views must not be considered as a program, but merely as suggestions for discussion.

BUBBLES

OUR LOST BARGAIN

HOW WE JUST MISSED GETTING THE DANISH WEST INDIES

BY EDWIN E. SLOSSON

ON the evening of January 7, 1865, there was in the city of Washington a cross French cook. He had reason to be cross, for his dinner was spoiling, tho not from his fault. It was a special dinner, too, given at the French Legation to the Secretary of State and certain members of the diplomatic corps, and none knew better than the cook how critical of culinary art diplomats become in the course of a career spent largely in dining out. The hour set had come and past and still his master failed to give the signal. All the expected guests had arrived, so the anxious cook learned from the servants in the reception room, but they were as much puzzled as he over the delay. It seemed that Secretary Seward had come surprizingly early. So by a curious coincidence had the Danish Minister, General Raasloff. The two had at once retired to a secluded sofa and engaged in earnest conversation. The other guests came, looked into the room and forbore to disturb them. They were talking too low to be overheard, but from their manner it might be inferred that Mr. Seward was urging something and that General Raasloff was opposed to it. The hungry diplomats, while keeping up a lively conversation about nothing to cover the delay, were silently speculating as to what was in the wind. They recalled that at the last White House reception to the diplomatic corps President Lincoln had singled out the Danish Minister for special attention, had talked with him in fact some minutes longer than to any of the others, a significant thing doubtless—if one only knew its significance.

Fifty years have elapsed since that dinner got cold and what neither cook nor diplomats could understand is open to anybody who cares to know. The Administration was trying to buy the possessions of Denmark in the West Indies. The war had demonstrated the need of a naval station in the Caribbean. The British and French harbors had been hospitable to Confederate cruisers and blockade runners, but the Federal warships found it hard to get shelter or coal there. This attitude persisted in England up to the present war, as one can see by referring to the latest British work on the West Indies, *The Cradle of the Deep*, published in 1908. The author, Sir Frederick Treves, rejoices in the escape of the "Alabama" from the "Iroquois" and calls it the "basest meanness" that a Yankee vessel in the harbor of St. Pierre signalled her movements to her pursuer by a rocket. Now, of course, England takes a different view of blockade runners and commerce destroyers. Probably Sir Frederick would not regard it as an act of "basest meanness" if a British vessel had indicated to a British cruiser the whereabouts of the "Emden" in the Indian Ocean.

If it had not been for the friendliness of Denmark our vessels would have had a bad time in the Caribbean during the Civil War so President Lincoln was disposed to be generous in his offer for the islands out of gratitude to the Danes. The purchase of Alaska was in part payment of a war debt of the same sort.

THE CROSS-ROADS OF OCEANIC COMMERCE

The three Danish Islands, St. Thomas, St. Croix and St. John, stand at the intersection of the routes between Europe and Panama and between North and South America. Before the war the Germans were developing a great commercial port at this strategic point

FREDERIKSTED, THE CHIEF PORT OF SAINT CROIX OR SANTA

The price we paid to Russia, $7,200,000, tho less than we have got out of Alaska in a single year, was considered absurdly high by both Russians and Americans at the time, and it was difficult to justify it on economic grounds, as the congressional debate shows. The real argument for it was the desire of rewarding Russia for the support she gave us in the Civil War when the presence of Russian battleships in Boston harbor was regarded as a proffer of aid in case England should make war upon us.

The purchase of the Danish islands was also urged on grounds of gratitude. Both bills were before Congress at the same time in 1867, but one was taken and the other left. It was Senator Sumner, Chairman of the Foreign Relations Committee, who defeated the Danish purchase and carried thru the Russian, tho why he did so has never been explained. For five years he held up the treaty and finally in March, 1870, he wrote "Adversely" upon the back of it and recommended "suspension of action." The Independent, I am proud to say, constantly opposed Sumner on this point, altho it was ordinarily among the foremost of his admirers and supporters. This rejection of the treaty of purchase by the American Senate after it had been solicited by the American Government, was a great disappointment to the people of the islands, who ardently hoped for annexation to the United States. When the question was put to vote in 1868, the people marched to the polls under the American flag while the band played our national tunes. In the island of St. Thomas the vote was 1039 to 22 in favor of annexation; in St. John it was 205 to 0.

In thus securing the defeat of the annexation bill, Sumner acted as the tool of Bismarck, altho we may well believe it was unwittingly, for it is only since the death of Bismarck that the secrets of his tortuous policy have been revealed. It must be remembered that at that time the United States alone among the maritime powers of the world had no foothold in the Caribbean, and they were determined that she should never get entrance here. President Lincoln and Secretary Seward carried on their negotiations with General Raasloff in the disguise of casual conversations, for they realized that if England, Prussia, France or Spain got wind of it they would try to block the plan. Three months after Lincoln and Seward had broached the question the first was killed and the second wounded by Southern assassins. Seward took advantage of his convalescence to pay a visit to the Danish islands ostensibly to recuperate his health. But Earl Russell, the British Secretary of State for Foreign Affairs, suspecting that he had a political purpose in mind, took measures to prevent it by securing from the Danish envoy in England a promise that Denmark would not consider the sale of her West Indies possessions without consultation with England. How the proposal was regarded in Great Britain may be seen by the following quotation from a British journal of December, 1865:

> This move on the part of the Americans has unquestionably altered all the relations between the countries in the event of war and is of fifty times more importance to England than all the maneuvers which have taken place about Turkey for the last hundred years.

The Danish Government when in the hands of the Conservatives refused to listen to the American proposals for purchase of the islands, but when the Liberals came into power in November, 1866, with General Raasloff as Minister of War, the sale was agreed to because Denmark needed the $7,500,000 offered for St. Thomas and St. John to be expended in fortifying her frontier against Germany, which had robbed her of Schleswig-Holstein. But the failure of the American Senate to support the Administration caused the overthrow of the Liberal Government in Denmark and the secret alliance which Bismarck arranged between the King of Prussia and the Czar of Russia made Denmark helpless. The chance we lost then never recurred in the forty years since.

From that time on Germany became increasingly hostile and Great Britain increasingly friendly toward American expansion. In Apia harbor and Manila bay German and American warships came close to a conflict. The Republican platform on which McKinley was elected in 1896 declared for the purchase of the Danish islands, but by that time Germany had got too strong a grip upon them. Realizing that the United States would never permit them to pass into the hands of another European power, the Germans had plans for their commercial conquest. A glance at the map will show that the islands stand at the entrance to the Caribbean and command the trade route from Europe to the Panama Canal. As Admiral Porter said: "St. Thomas is the keystone to the arch of the West Indies." It was the idea of the Germans that these islands might be made a great free port which would dominate the commerce of Central and South America as the British ports of Hong Kong and Singapore do that of the Far East. The Admiral said

ST OF THE THREE DANISH ISLANDS IN THE WEST INDIES

Handelsgesellschaft St. Jan was formed in 1899 to buy up the land of the island of St. John and develop its hurricane-free harbor of Coral Bay. But Herr Ballin, one of the greatest commercial strategists of modern times and the Kaiser's chief aid in the expansion of Germany, chose St. Thomas instead of St. John as the headquarters of the Hamburg-American line in the Caribbean.

Of course the United States had no right to interfere with the commercial development of the islands by German capital, but it was feared that this would inevitably lead to political control and in time to annexation by Germany. There was only one way to stop it and that was to buy the islands ourselves. Prompt action was necessary if the most progressive of our commercial rivals was not to get the chief benefit of our Canal. Fortunately we had men of foresight and decision at the head of the nation. President Roosevelt and Secretary Hay at once offered $5,000,000 for all three of the Danish islands, St. Thomas, St. John and Santa Cruz, and it was accepted. Mr. Hay signed the treaty on January 24, 1902, and the President sent it to the Senate three days later.

But once again the Senate spoiled the project. The treaty was held up in the Senate committee for over a year before it was past, and by that time it was too late. German influence had been brought to bear thru the court and the treaty was rejected by the Danish Senate. The Danish people undoubtedly favored the sale of the islands. The Government would get some ready money instead of paying out between one and two hundred thousand dollars every year to make up the deficit in the insular budget. The treaty past the Folkething, which is the lower and popular house. But the upper house, the Landsthing, is composed of sixty-six members of whom twelve are appointed by the crown for life and the rest chosen by the leading taxpayers for eight years. Even in this aristocratic chamber it was difficult to muster enough votes to block the measure. There was a clear majority in favor of it, but at the final moment two of the crown's appointees were raised almost from their deathbeds to vote against it. One of these, Thygesen, was ninety-seven years old and had quite lost his mind. The other, Roben, was eighty-seven and so feeble that he had to be brought into the chamber on a litter and braced up by stimulants while he voted. By the presence of these two old men the vote was a tie and the treaty was lost.

Two arguments were used in Denmark and the islands against the sale, one sentimental and the other practical. The first was that it was derogatory to the dignity of the crown to sell its territory, and especially since the Americans, after offering to purchase in 1865, had backed out of the bargain. The second argument was the promise that if the islands remained in the hands of Denmark, millions of dollars of Danish and German money would be spent in developing their agricultural resources and placing their ports among the great commercial centers of the world.*

In the ten years following several millions were spent in the islands by the Danish West India Company, the Danish Plantation Company and the Hamburg-American Company, tho the results have in some cases been disappointing to the people. The war, however, has knocked out their prosperity and the fortunes of the islands have been thrown into the melting pot. Nobody knows who will own them when the war is over. It is rumored that the Allies have offered Schleswig, if not Holstein, to Denmark for her aid or friendly neutrality, and that in compensation the Danish islands are to be ceded to Great Britain or France. If on the other hand Denmark should become involved in the war and conquered by Germany, then the islands would pass into German hands. In either case we should have to decide whether such a transfer was a violation of the Monroe Doctrine, and if so whether we should prevent it by force. It would be the wisest course to avoid the danger of some time being placed in a position where we should have to decide this embarrassing question, and this we can only do by purchasing the islands whenever we get a chance. Such a chance is likely to come, if ever, within the next few months, for the general redistribution of territory which is bound to come at the end of the war will doubtless not leave the West Indies unaffected. The Danish Government is reported to be willing now to consider a proposition to purchase. If this is true we should open negotiations at once.

Altho by the acquisition of the vastly more valuable Porto Rico we have obtained the long desired foothold in the Caribbean and an outpost for the defense of the Panama Canal, still our position would be very much strengthened by the possession of the Danish Islands which

*On the various negotiations for the purchase of the islands see *Boston Advertiser*, 1869; Olive R. Seward in *Scribner's Magazine*, 1887; Are We Bound in Honor to Pay for the Danish Islands? by James Barton, 1867; Danish West Indies and American Ownership, by Stickles, *Jour. Amer. History*, 1913; Reports of 57th Congress, Serial 4239, 4407; Kraus's *Die Monroedoktrin*.

lie next to Porto Rico on the east and in fact within sight of it. The three islands of St. Thomas, St. Croix and St. John have altogether about twice the area of the District of Columbia and a population of 33,000, mostly negroes. The Danish Government has, as I have said, been generous in the matter of money in recent years, and given them on the whole a good administration, but there is now considerable popular dissatisfaction, which has taken the form of a protest to the king, and local disorder. The people have little sentimental attachment to Denmark and would probably vote, as they did before, for annexation to the United States if they got a chance. The chief opposition would come from those connected with the Danish administration or the German commercial interests. English is still the language of the islands, altho Danish is now required to be taught in the schools a few hours a week.

The islands have had many owners since Columbus first sighted them. St. Croix has been in succession Spanish, English, Dutch, Spanish, French, Maltese, French, and Danish. In 1753 it was purchased by King Christian VI for $150,000. Since then real estate has risen, and the islands would be well worth what we offered for them in 1903.

It would be a great inducement to the islanders to approve of annexation if we could assure them that they would not lose their present free port privileges. This concession we might well grant, at least for a stated number of years, for it would probably be as much in our interest as theirs. Many people are now urging that a free port district, like that of Hamburg or Antwerp, be established at New York or Panama. The Danish islands would have one decided advantage over either of these or any other continental port in that it is unembarrassed by a protected *hinterland*. They could then be developed under American auspices, even better than under German, into a great international *entrepot*, standing, as they do, at the cross-roads of the routes between Europe and Panama and between North and South America.

EFFICIENCY IS SERVICE

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

A NOTED efficiency engineer, who works twelve hours a day and begrudges the time to sleep and eat, was asked the secret of his love for his work. "Efficiency is the science of improved service," he replied, "and the best fun I know is putting a smile on a face that wasn't looking for it." He was right—and the real measure of your efficiency is the number of smiles you can put on the faces of your clients, patrons or customers also of your clerks, friends and relatives.

"How can I serve you better?" is the question that should dominate the heart and mind of every ambitious man or woman. Greater is he who serves than he who receives; but greatest is he who both serves and receives. To obtain every penny that our time and toil are worth, but to give a graciousness, thoughtfulness and zeal so far above reward that money cannot pay for them; here is the ideal "trade balance" for a nation or an individual.

"Better service for patrons and employees" has come to be the slogan of the world's greatest business concerns. Good service benefits the server more than the served. It cements the served to the server, and makes a transient customer a lifelong friend. I know of numbers of people who do their buying at a certain store because once a clerk or official of that store did them an unexpected, uncalled-for service. Men have joined a church because the minister seemed as anxious to serve them when they hadn't joined as if they had. Young folks have selected a college because some teacher of the college, making a lecture tour, was genuinely kind to them in offering counsel about their education.

TO SERVE BETTER IS TO SAVE MORE

The first reason for efficiency is economy. Well, to serve better is to save more. The officials of one of the wealthiest corporations are so fully convinced of this principle that they have made their watchword "The customer is always right." Even when the customer is wrong, the fault he finds must be rectified to his own satisfaction. The loss of his good-will means more to the concern than the few minutes and dollars which he requires for adjustment of his grievance. Moreover, a grouchy customer often becomes the finest advertiser for the store when his complaint brings full redress; a man feels so almighty good and pleased with himself when the vast machinery of a modern business all whirrs to the tune of his command!

The costliest things are the needless mistakes, and the worst mistake in a trade or profession of the modern world is defective or deficient service. The service of manufacturer to wholesaler, of wholesaler to jobber, of jobber to dealer, of dealer to customer, of employer to employee, of employee to employer; these services, when properly rendered, will increase financial success all down the line. Apart from the spirit of altruism that should control and animate our work, the scientific reason for laying stress on service lies here; that *the man whom we serve is our best critic*. The faults in a clerk are sure to be known to his employer—and those in the employer to the clerk. A good move is to capitalize the custom of criticism, and to render ourselves more effective by stopping the mouths of our critics. We all want to please ourselves, and the quickest way to do it is to learn to please the hard-to-please. Don't ask me how—try it and find out.

I am speaking from experience—painful experience. It sometimes happens that a reader violently disagrees with me. When I was very young, upon the occurrence of such an event I would look down at the intruder and murmur, "How ignorant and coarse the fellow is, really not worth a second thought!" Later, when I acquired enough health to have some fighting blood in my veins, I would shout in my mind at the critic, "You're dead wrong; what you need is to have a hole punched in your head and some sense poured in!" Later yet, after the world had knocked and battered me around sufficiently, I came to look on every critic as a friend; the more he railed, the more I thanked him. For I discovered that every broadside of condemnation hit a weak spot in my character or equipment, and by marking these vulnerable spots I could strengthen my battle front. Any public service that I may now render has been largely due to the unconscious kindness of my enemies. How to arrive somewhere: Let your critic be your guide.

It is most encouraging to watch the trend of the world toward a sci-

versal application of the law of service. We find it everywhere—in commerce, finance, education, medicine, jurisprudence, reform, religion. Let us note a few recent examples.

HOW SERVICE SPREADS

The big automobile companies are establishing free "service stations" thruout the country for the benefit of customers; national manufacturers maintain "service departments" where counsel may be had without charge; some of the public utility corporations have reduced rates voluntarily, to meet the hard times and satisfy patrons; many of the great department stores provide special service to their visitors at less than cost; and the most famous merchant in the United States declares that he prefers the word "service" to the word "efficiency," as all efficiency is based on service.

The bankers have begun to formulate a system of rural credits and loans, thereby serving the huge agricultural populace; and to inculcate the habit of thrift by printing and circulating a set of instructions for personal means of saving. The teachers are giving free lectures to the parents of pupils; are visiting pupils in their homes; are turning the schoolhouse into a place of hospitality, a social service center. The doctors are abandoning drugs and substituting lessons in preventive hygiene; are distributing leaflets and bulletins, writing reports, books and magazine articles—all tending to deprive the doctor of his fee, but to serve his client more generously.

A commission has been appointed among lawyers, with ex-President Taft a member, to infuse more completely the spirit and fact of justice into the letter of the law; the office of "public defender" has been created for the righteous and impartial support of culprits who are without means; the night court, the juvenile court, and the woman probation officer all help to give a prisoner a square deal. Temperance reform takes on slowly the appearance not of hit-or-miss, holier-than-thou preaching, but of scientific, personal, sympathetic, detailed, study of the *causes* that lead to wrongdoing, and gentle, patient, psychological and biological treatment and removal of the cause. And in religion—dogmas are dead, while the beautiful deeds of human service are the acknowledged proofs of strength in a church. Everywhere, the aim of progressive people now is to serve.

I have seen the president of a national institution cheerfully do the work of his office boy when the boy was suddenly called home to attend a sick mother. I have seen the world's richest young man put himself out to accommodate a fellow whose pocketbook and head were, to all appearances, equally empty. I have seen a dignitary who holds thirty offices—some of them international—go into the kitchen and wash dishes. Are you as proud to do the humblest work well as you would be to hold the highest position? Then you're of the stuff that big men are made of.

The principles and motives underlying efficient service are as broad as life itself. Here no technical barrier divides the teacher from the millhand, the corporation president from the lowest clerk in his employ. Your work may be in a store, a factory, an office, an attic, a theater, a bank, a home, a school, or a church; no matter, the ideas and ideals of genuine, satisfying service will appeal and apply to you as of direct personal use.

What are the first ten points in efficient service? We judge them to be as follows, and would commend them to you for analysis and comparison relating to your business or profession.

WHAT EFFICIENT SERVICE MEANS

1. *A keen sense of personal responsibility.* This seems largely lacking in the make-up of the American child, and is not fostered by our educational methods, which reward grades in school instead of growth in character. The founder of scientific management says that the greatest drawback to industrial advancement is the prevailing tendency of the American workman to "soldier" on the job; he has to be watched, warned and threatened, or he slumps into laziness and carelessness. The first sign of a good workman is that he does his best work unwatched. Moreover, a man's work pays him just what he feels he owes to his work—little for little, much for much. The guarantee of our satisfaction and promotion is the willingness to sacrifice anything, everything, short of health and honor, to the claims of our calling.

2. *A scientific study of the needs and the wishes of our patrons.* The needs and the wishes do not always coincide, yet both should be granted. Thus, the largest newspaper in the United States prints flaming headlines, huge exposures, and volumes of political and "sporting" news—which is what people pay for: then provides the most thoughtful editorials and uplifting poems—which the people need, but wouldn't pay for. One of the biggest patent medicine concerns makes its remedy chiefly of colored water, then offers hygienic advice which does the work that the concoction is supposed to do. Many a public writer, now earning $5000 to $12,000 a year, once declared himself unappreciated and the world all wrong simply because he had failed to study his market—he would submit farcical jibes to the *Atlantic Monthly* or philosophical dissertations to the *Smart Set*. Study the needs and wishes of your patrons.

3. *A fresh and full supply of the best goods.* This applies not only to merchandise, but to every commodity and service. The cry of today is always for something new, and the way to meet the demand is to supply what is both new and true.

KNOW YOUR GOODS

4. *A thoro knowledge of the goods and pride in the service.* Here is a much-neglected field. The price of a ribbon and its place on the shelf do not form the summation of knowledge for a clerk. The ribbon should match the complexion, taste, purse, temperament and design of the intending customer. How many ribbon clerks are trained to see all this at a glance? How many have learned the psychology of color? How many can tell where and how to secure any ribbon out of stock that the customer may wish? How many really enjoy being accommodating when the service costs a little trouble? "I haven't this" versus "We will get it for you"—here in a clause we may note the difference between bad service and good service, and between bad salesmanship and good salesmanship.

5. *Technical training and superior skill.* To serve a patron effectively we must be able to do what he cannot, but must never show that we know we can. Here is where the average teacher falls short—he cannot teach in a superior fashion, but looks as tho he could. He must learn from the scientific salesman. Probably 500,000 American business men have taken special courses in practical business training. I doubt if nearly as many teachers have so prepared themselves for their life work before engaging in it. Hence a great number have to face disappointment, sooner or later. Promotion without preparation is unethical and unscientific; but thousands of teachers look for it. Every ambitious man or woman, bent on achieving the most possible, should take a residence or correspondence course in the professional or industrial subject bearing directly on his vocational career.

6. *Psychological price and a fixed, frank policy.* The psychological price of a thing is what people think they can afford to pay. Thus a $1.50 arti-

cle marked down to $1.49 satisfies cupidity and sells like hot cakes; while a $150 surgical operation marked up to $300 satisfies the awe and fear of the unknown, and is paid for without a murmur. To charge every cent that a commodity is worth, and not a cent more, is a fine test of commercial character. A new price plan, recently adopted by a national shoe company, a wealthy construction company, and a few other concerns, frankly and openly specifies "cost plus five per cent (or ten per cent as the case may be), and shows the customer an itemized bill of costs, proving the net gain to be as declared. This plan, taking your customer into your confidence, has points of merit worth noting.

7. *Cheerfulness without pay.* A little smiling service means more than a large frowning one. And smiles cost no energy, no money, no pains, merely a bit of thoughtfulness and friendliness. A railroad company last year installed efficiency methods which tallied a reported saving of $6,000,000. One of the new features was the adoption of this slogan: "Our Patrons Are Our Guests"—and a corresponding mode of behavior. Hint for every business man: Be as cordial and obliging to everybody, stranger as well as customer, as tho he were a guest in your home.

8. *Deference without servility.* And to the poor as well as to the rich. Here is a lovely Arabian Night's entertainment for a millionaire: Dress up in a beggar's old rags, then go shopping on Fifth avenue; when each clerk or other menial snubs you, flash a $1000 bill on him or her, then deliver a lecture on the folly and sin of snubbing anybody, then report the offender to the management.

9. *Prompt and full adjustment of all complaints.* In every line of business, a method of reports, tabulations and results in the complaint and request department should be made to guarantee satisfaction to the patron. How do you make sure that every patron is always pleased? How *will* you make sure? One of the first rules for business prestige is to make every critic a friend.

10. *Your word is as good as your bond.* I would rather lose a finger than break my word in business. A lost finger means inconvenience, but a lost reputation means financial as well as moral suicide. And a promise to a clerk is more binding than a promise to the richest patron; the patron goes, but the clerk stays to scatter seeds of trouble. In trade, as in friendship, the supreme and winning force is fidelity. So the word "Truth" has been made the watchword of the world's largest club of advertising men. Truth in promise, truth in performance, truth in ultimate purpose and immediate plan; here is the backbone of modern, broad, efficient service. To have your patron trust you as he would his best friend, this should be the aim and creed of every one who serves.

New York City

THE WAR AND WOMEN PHYSICIANS

BY JAMES J. WALSH, M.D.

THE war with its call for so many physicians has brought a distinct revolution of feeling with regard to women physicians in most of the European countries. While it has been perfectly possible for women to study medicine for many years in a number of European medical schools, there has never been any hearty welcome for them by the profession in general. Now with nearly one-half of all the physicians in the countries at war occupied with the care of wounded soldiers, there is no little regret exprest that more women physicians are not available for the needs of the civil population.

In England particularly, where conservative feeling has distinctly discouraged the study of medicine by women, there have been many expressions of this regret, and, according to the London medical correspondent of the *Journal of the American Medical Association*, there is actually talk of the closing of hospitals in London for lack not of patients but of physicians.

This may seem surprizing, but the details of the enlistment of physicians makes it very easy to understand the conditions that have developed. Considerably over 5000 physicians are in full time service in the English forces. This leaves only about as many more of military age to take care of the people of England. It is true that there are a great many physicians above the age limit for military service who are engaged in active practise, but these older men are not the ones on whom falls the burden of caring for the poor in the cities and doing the hospital and, above all, the dispensary work. There was a distinct increase in the death rate from the infantile diseases grouped roughly under the term summer complaints among the children of London last summer, and this was attributed by good authorities to the lack of physicians because of the drain on the medical profession, particularly on the younger men, by the call of war.

For, while the recent publication of the announcement from a committee of the British Medical Association that 2500 more physicians are needed for the English army has led many people to think that physicians were probably slack in volunteering for the Medical Army Corps, the exact opposite is true. In spite of the fact that the death rate and still more the disability rate among the army medical corps is much higher than in any other department of the service, because its members have been ready to risk their lives to save the wounded, the number of medical volunteers in proportion to the whole number of the English profession has been very nigh. More of them in ratio to their numbers have been decorated for distinguished bravery than of any other of the army departments.

The physician is much more needed in modern life than was the case before modern developments in scientific medicine and surgery, and above all, in sanitary science and hygiene, took place. Physicians are now engaged not alone in the care of the ailing in their homes, as was true almost exclusively a century ago, but in extensive hospital work, in the time-taking requirements of the public health service, in school inspection with all its demands, and in factory hygiene, as well as in special work of various kinds. Many more physicians are now needed in proportion to the population than were required even half a century ago. It has taken this great war, with its demands upon the profession, to awake the people to this fact.

Hence the widespread feeling that women should be encouraged to enter the medical profession, and particularly now, when there are much fewer students in the medical schools than under ordinary conditions. It would seem almost inevitable that the war will bring, as one of its few desirable results, a new opportunity to women for professional study.

PEW, THE BLIND PIRATE, ACCUSES HIS FELLOW BUCCANEERS OF TRICKING HIM

PIRATES IN A BAND BOX

WHO would expect that supposititiously stereotyped thing known as a Broadway audience to take to a play guiltless of sex interest, containing an entirely negligible quantity of femininity, and dealing only with such wholesome vices as piracy, mutiny, battle, murder and sudden death? Certainly not the stereotyped Broadway manager. But the unexpected has happened.

It is a tiny house, it is true—the Punch and Judy—with its 299 seats. But no play could fill even that scant number night after night and matinee after matinee with inevitable regularity unless it had found a way to the popular heart.

An odd number, is it not, that 299? Odder still by coincidence when you learn, or remember, that the Little Theater, the pioneer of the city's intimate playhouses, has the same number. The coincidence resolves into intention, however, as the fact appears that the difference between 300 and 299 is all the difference between a heavy municipal tax and a merely nominal one. The house is quite as odd as its size. Its front is like a playhouse cut out of cardboard—and a very jolly one, too. As you turn out of Broadway to approach it, if the hour and minute are right—8, 8.10, 8.20, 8.30 or just before the curtain of every act—a figure in herald's garb mounts its battlements and blows a jovial fanfare.

Within the unusual continues. The house is an oblong box, the seats on the floor look from the back for all the world like pews in a church, but from the other point of view—or contact—they are vastly more comfortable. The stage fills one end of the oblong, a row of boxes lines the two sides and the other end. Apparently, one can see all the stage from every seat in every box, and if that is not unusual.

But the play's the thing. And the play, if I may borrow a phrase from the boys who ought to be its chief auditors, is "some play."

Doubtless some one might have written a better story of adventure than *Treasure Island*, but doubtless no one ever did. From the first strains of "Fifteen men on the dead man's chest," to the last glimpse of Long John Silver slipping away in safety to oblivion, the book is true. Not tiresomely true to callous fact, but true to that more splendidly disturbing thing—romance. Such pirates may never have sailed the seas, but thousands of them have sailed time out of mind the vasty deeps of boyish fancy. Any boy, whatever his age, who does not like *Treasure Island* should be clapped into petticoats and set to doing tatting.

Well, the play is worthy of the book. One could hardly say more. The story has been followed with surprizing fidelity—books are so often taken as mere points of departure in play-writing. It is Stevenson—to the life. His characters live on the stage as he made them live in his tale. One would recognize them in a flash if not a name were spoken across the footlights.

The Boy is daring, resourceful, valorous, as every boy would like to be; naïve and trusting as every real boy is. The Squire is obstinate and guileless; Captain Billy Bones thirsty and blasphemous; old Pew of the blind eyes cruel and uncanny; Captain Flint the parrot glossy and verdant, but, alas, taciturn to a fault; and Long John Silver—but he deserves a sentence to himself.

Long John is as handsome as your heroic villain or your villainous hero ought to be. He has the one-leggedness of Peter Stuyvesant; the plausibility of a politician or an Irishman; the ingenuity of the devil; the *sang froid* of the Man Who Never Knew Fear; the ruthlessness of a buccaneer; the likeableness of—But I am not telling anything new. It is all in the book; and now here it all is upon the stage. Set in stage pictures of splendid picturesqueness. If the Admiral Benbow Inn, the "Hispaniola," and the island did not look like that, so much the worse for them.

So a long run and a profitable. One's only regret is that R. L. S. cannot slip into one of those boxes some night and see the play he unwittingly wrote. He would like it.

H. J. H.

WOMAN SUFFRAGE AND CONGRESS

BY A CORRESPONDENT IN WASHINGTON

A NEW epoch in the woman suffrage movement opened when the suffragists of the eastern states turned to the women voters of the West and asked their help in obtaining the passage of an amendment to the United States Constitution. When the leaders of the Congressional Union for Women Suffrage planned the appeal, they proposed to use the argument that the women of no state can be fairly represented in the National Government so long as any women remain unenfranchised, and that for their own sake the women who already have the vote should put national woman suffrage first, as the only method of obtaining full recognition by Congress of women's needs and women's interests. But when the great convention of women voters was assembled at San Francisco, last September, it was quickly discovered that an appeal to self-interest was weak and ineffective as compared with an appeal to the conscience, the nobility, the generosity of the women. The movement has already assumed such proportions that it was described by one of the most prominent lawyers of the Pacific Coast, in an attempt to explain the position to President Wilson, as one that must be taken into account by Congress and the Administration. "The women voters of the West," he wrote, "are standing together on this question of women's enfranchisement thru constitutional amendment with an almost fanatical solidarity."

The immediate result of this injection of some four millions of possible votes into the suffrage agitation was clearly to be seen in Washington during the two weeks of suffrage conventions and suffrage activity from December 6 to December 20. The first annual convention of the Congressional Union opened on December 6. In itself the convention differed little from many another suffrage convention that has been held during the sixty-seven years that have past since the women first met and organized the women's rights movement. The chief difference between the Congressional Union convention of December, 1915, and all previous conventions was the conviction that possest the women and pervaded all the proceedings, that the movement had reached the threshold of victory that it was only a matter of months before success should be attained. Self sacrifice was there, but that has characterized many a gathering of suffragists, and even the large amount subscribed for the work of the Congressional Union — over $45,000 — has been surpast more than once in the woman suffrage movement.

What was new concerning the convention of the Congressional Union was the fluttering of the dovecotes of the politicians caused by it. Both the Democratic and the Republican National Committees held meetings during the two weeks December 6 to 20; and, for the first time, suffragists appeared before the committees and urged the two great national parties to further the immediate passage of the Woman Suffrage Amendment. Representatives of the National Woman Suffrage Association and of the National Association Opposed to Woman Suffrage were heard by these committees, as well as the envoys who were sent to Washington by the Women Voters' Convention of September 14-16, 1915. But no one who attended these hearings could have failed to be imprest by the keen interest shown by the politicians in the policy to be adopted by the women voters. Miss Frances Jolliffe, of California, and Mrs. Sara Bard Field, of Oregon, were the two envoys. Mrs. Field traveled all the way across the continent by automobile to bring the message of the women voters and the enormous petition gathered at San Francisco to Washington. Both these women had not only been voters but had been actively identified with one or another of the political parties. Their assertion that hundreds of thousands of women were pledging themselves that "henceforth they would know no party until women are enfranchised" was something much stronger than any academic argument.

The contention so constantly put forward by all suffragists that indirect influence is a poor substitute for the vote received another confirmation from the President himself. President Wilson had already taken the step of voting for woman suffrage in New Jersey, but until he met the envoys of the women voters he had always insisted that the question was one for the states and not for the National Government. After listening to Miss Jolliffe and Mrs. Field, he took another long step forward. "I can only say to you," he said, "that nothing could be more impressive than the presentation of such a request in such numbers and backed by such influences as undoubtedly are behind you." He promised to confer in the most serious way with his colleagues at the other end of the city "with regard to what is the right thing to do at this time concerning this great matter," and he finished by saying that the visit of the envoys with their message "will make it necessary for all of us to consider very carefully what is right for us to do."

It is no new thing for the Senate suffrage committee to grant hearings to suffragists, and not much can be deduced from the fact that representatives both of the National Woman Suffrage Association and of the Congressional Union appeared before the committee on December 15 and 16. But it is surely worthy of note that the Judiciary Committee of the House not only granted a hearing to both associations, but that the members of the committee spent so much time in questioning and cross-examining the speakers who appeared for the Congressional Union and the voting women that the hearing was not concluded in the time set for it. Every effort was made by members of the committee to draw from Miss Jolliffe, Mrs. Field, Miss Helen Todd and Miss Alice Paul all possible information concerning the sources and amount of their funds, their force of workers, their expenditures, and especially their future policy under all emergencies.

A Presidential election is due in 1916. No one imagines that the four million women who are entitled to vote will all stand together or will vote as the Congressional Union directs. But if the movement of the women voters goes on as it has begun, gathering strength and momentum during all the months that intervene between now and November, 1916, the vote that will be cast for suffrage first, regardless of party ties, will be a vote that cannot be thought negligible by any political party. In view of the anxieties and uncertainties of the leaders of both great parties, the Congressional Union considers it not unreasonable to believe that the embarrassing question of woman suffrage will be removed from the field of national politics before the meeting of the National Democratic and Republican Conventions next summer, and that Senators and Representatives will relieve themselves of further responsibility by passing the amendment and thus relegating the question to the state legislatures.

WHY WOMEN SHOULD NOT PRAY
A PARODY ON WELL WORN ANTI-SUFFRAGE ARGUMENTS

1. Because a wife's prayers would either nullify or duplicate her husband's.
2. Because praying would distract a mother from her natural duty of teaching her children to pray.
3. Because the conditions of a woman's life are such that she can not know what it is wise to pray for. She might pray for rain when fair weather was needed or for fair weather when the crops required rain.
4. Because women already pray indirectly thru their sons, husbands, and brothers.—Alice Duer Miller, in *New York Tribune.*

Annual Sale
at McCutcheon's

While the cost of Linen Goods, on account of war conditions abroad, is of necessity a little higher than a year ago, the prices at which we are selling goods to-day are not nearly up to present-day values.

From these prices, however, in order that our January Sale may be held just as usual, we shall offer for the entire month of January

A 10% DISCOUNT.

We can do this because we were able to abundantly supply ourselves with Housekeeping Linens of all kinds some time ago, before prices had materially advanced. Under this heading are included the following:—*Napkins, Table Cloths and Fancy Table Linens. Tea Cloths with Napkins to match. Breakfast Tray Sets, Scarfs and Luncheon Sets, Doylies, etc.*

The customary 10% reduction will also be made on all the goods in the following departments:

Bed Coverings
Foreign and Domestic Lingerie
Ladies' Hosiery and Underwear
Children's Wear

Booklet illustrating the various lines of goods included in this sale mailed free on request.

James McCutcheon & Co.
Fifth Avenue, 34th & 33d Streets, New York

The Independent as a Weekly Periodical Acceptable to Students

Since all teaching must have some definite relationship to life and since it is evident that a good weekly periodical will be a most valuable aid in transferring the interests awakened in the teaching of English to the interests of mature life, it is necessary to consider what periodical shall be used. The daily paper, however excellent it may be, includes a mass of hastily prepared material, much of which is purely ephemeral and much of which is all too often undesirable for consideration in the school classroom. It contains little or nothing of purely literary value. The smallness of type, the quality of paper used, and the necessary economy of space, forbidding much artistic effect, do not make the reading attractive to the eye. Many excellent magazines deal largely with fiction, and thus fail to connect with the broad currents of present-day creative thought. Other publications deal with specific fields of work—with distinct occupations, with religion, philosophy, literature or politics. Others give news and comment on current topics of interest, but omit articles of genuine literary value.

Many teachers testify that The Independent is a paper of the highest type. That it meets with the approval of students is shown by its wide circulation in schools and colleges thruout the country. In the Stuyvesant High School, where the purchase of any periodical is purely optional on the part of every student, The Independent is bought weekly by nearly one thousand of the students, who say that they prefer it to other publications of somewhat similar character. A class section of the senior class, on being asked recently if it wished to change from The Independent to another periodical, stated emphatically that it preferred to continue the use of The Independent.

FREDERICK HOUK LAW, A.M., PH.D.,
Head of the English Department, Stuyvesant High School, New York.

THE NEW BOOKS

VERSE—AND SOME POETRY

That vivid young pagan Rupert Brooke, who wrote superbly of the war, and died, has been twice discussed in The Independent recently, on November 1 and December 6, 1915, and his *Collected Poems* need little mention here. Barring the five sonnets, "1914," of which the best two have been quoted in these pages, his work is a curious jumble of moody fragments. Some of it is grotesque, much of it intensely cynical, some exquisite in its accurate rendering of a phase of passion or passionlessness. Brooke piles up adjectives in a splendid Elizabethan fashion; his phrases fairly stab; he handles rhythm with a delicate ear for variety. His war sonnets are thoroly of a piece, in thought, with his less enduring work, but they cap it all: they express richly the supreme reaches of his philosophy.

Such is not the case, one hopes, with Alfred Noyes. His utterances on the war—like most of the poems in *The Lord of Misrule*, are pretty poor stuff. "Thrice Armed" is vigorous, if not unusual, but a number of other poems on England's crisis are either frankly pedestrian or vaguely compounded of valiant words, scrappy historical allusions, and a rather nebulous religion. And in writing of "Canada, Canada, clear-souled Canada," he descends to shabby doggerel.

Mr. Noyes has always leaned heavily on his allusions and made large use of atmospheric proper names—*vide* Sherwood, Old Japan, the Mermaid Tavern—and in this collection he has occasionally carried the trick so far that he quite outruns the reader's interest or comprehension. It is good to write colorful ear-filling things that read aloud to perfection, but there is small virtue in throwing two or three romantic-sounding proper names together, turning them over half a dozen times in a lilting measure, and leaving it to the reader to extract an idea from the product.

Furthermore, Mr. Noyes is trying out so many kinds of uninteresting verse forms that he is in some danger of losing that prevailing singing quality which for most readers has been his greatest appeal. But there is now and then—as always in his work—a clear lyric note, or a gorgeous patch of color, or a fine moral strain. The title poem, tho a little silly in its confusion of concepts, is as buoyant and genial as Mr. Noyes should be. But after his "Collected Poems" the volume is unmistakably anti-climax.

It is a relief to turn to the American poets, who have no obligation to versify Lord Derby. A scant word or two is all that Sara Teasdale has to give to the war in *Rivers to the Sea*. A loosely organized sequence of direct and simple love lyrics is the foundation of the collection. They are penetrative and musical. Miss Teasdale sets much of her verse in a New York background, and the unaffected use she makes of the city is—to a New Yorker at least—charming. But her prevailing theme is the heart of a woman, and it is for the delicacy of her portrayal of a woman's moods, together with the rapid limpid verse in which she is at her best, that the book is chiefly to be welcomed.

The love episode of which she writes was incomplete. But George Herbert Palmer has "reluctantly," thirteen years after his wife's death, published a group of poems which Alice Freeman Palmer wrote during the late years of her life, forming together *A Marriage Cycle*. Those who read Mr. Palmer's biography of his wife will need no testimony as to the spirit of these poems. They are completely informal in expression, and many of them have not a little lyric charm.

The rather dignified verse which Thomas Walsh has gathered under the title of *The Pilgrim Kings* is almost all inspired by Spain and the legends of the Church. Mr. Walsh is distinctly not of the newer poets; he is reserved, disinterested; his themes, diction, manner suggest the last century. There is a hint of Longfellow. He writes dramatic dialogs in which the Spanish painters Greco and Goya appear with much animation. He tells gracefully the story of several quaint little miracles. He rings colorful variations on the legend of the Magi. Granted his prevailing temper, the verses are spirited in description and characterization, and not infrequently sonorous.

The two men who have been associated in the conduct of "The Sun-Dial" in the New York *Evening Sun*, and who have together made it distinctive among the "colyums" for its excellent verse, have published a volume apiece. Don Marquis, the editor, calls his book *Dreams and Dust;* Dana Burnet is content with *Poems*. Both books are liberally flavored with the poetical commonplaces of the day. Don Marquis occasionally runs up a wordy blind alley. Dana Burnet's worst temptation is to be sentimental. But both men write smoothly and for the most part melodiously, and with a good deal of genuine emotion. Dana Burnet is perhaps the more consistent. He has a robust, slightly archaic strain which he maintains very successfully, tho one regrets that for the most part his comments on the war are made in the vocabulary and images of the medieval romances. In "The Survivor" and "The Builder," however, he has spoken vividly and significantly on two phases of the tragedy of war. While he fails to strike the note of typical *vers de société* that Mr. Marquis now and then reaches, he can write daintily and lightly of youth and romance, and there is a fine rumble of blood and cold steel in his Panama poems. One feels that Mr. Marquis has perhaps the higher ambition and imaginative reach, but Mr. Burnet has provided the greater quantity of good, readable verse.

Collected Poems, by Rupert Brooke. Lane. $1.25. *The Lord of Misrule*, by Alfred Noyes. Stokes. $1.60. *Rivers to the Sea*, by Sara Teasdale. Macmillan. $1.25. *A Marriage Cycle*, by Alice Freeman Palmer. Houghton, Mifflin. $1.25. *The Pilgrim Kings*, by Thomas Walsh. Macmillan. $1.25. *Dreams and Dust*, by Don Marquis. Harper. $1.20. *Poems*, by Dana Burnet. Harper. $1.20.

A NOBLE RECORD

Miss Lillian Wald has sometimes been called "New York's Most Useful Citizen," and her record of service in *The House on Henry Street*, told unaffectedly and without exaggeration, would go far to justify such a characterization. For twenty of the busiest years a woman could live, Miss Wald has founded, guided and inspired the Henry Street Settlement. The system of district nursing that began with Miss Wald and Miss Mary Brewster has grown into a city-wide organization with many branches; the other activities of the settlement have been varied as the needs of the people, and of incalculable service to the city. The book is just what its name implies: the history of a house, rather than an autobiography, and one feels, thruout, the fine reserve of a nature most generous of praise to co-workers but never self-centered. We know of no more inspiring achievement than that of the two young nurses who were drawn into work among their neighbors in Henry street, and who by their efforts have transformed so many handicapped children into citizens of a nobler city. New York may well be proud of the house on Henry street, and of its devoted builders.

The House on Henry Street, by Lillian D. Wald. Henry Holt. $2.

DR. LYMAN ABBOTT

Dr. Lyman Abbott is a public character. He came from a well known literary family. Jacob Abbott was his father and John S. C. Abbott, his uncle. He left the practise of law, became a minister, began pastoral life in Terre Haute, Indiana, was pastor of a church in New York City and later the successor of Henry Ward Beecher in Plymouth Church, Brooklyn. He is best known, however, as still at the age of eighty editor of the *Outlook*.

Never elected to any public office, he has yet been a leader of public opinion and much sought for as lecturer and orator. There is scarcely any question of popular interest to the decision of which he has not given his voice and pen. There has been nothing startling in his career, but he has been so actively engaged in all the public movements of the last fifty years that his autobiography, modestly called *Reminiscences*, could not but be instructive and interesting.

We have here the record of an intellect, working with all facility, and with the passion of a teacher, applied primarily to high questions of religion and then to the moral bearings of politics and philanthropy. The volume tells, without egotism but frankly, what he has felt and what he has done. He recalls old conflicts and successes and at the end he rejoices to find thought freer, the country and the world better. His theology has developed on more and more liberal lines, he tells us. He early gave up the sterner teachings of Jonathan Edwards, then the stricter view of inspiration, and has defended those who denied the virgin birth. He defines his position as that of mediating between the rationalist and the mystic in theism and as an admirer of Eucken. He believes that God is not reached by reason, but by the experience of God in the soul. The dependence on reason would be the destruction of faith.

The volume will be welcomed not only by the numerous admirers of the author, but by all who are interested in the development of American thought and life during the long period it covers.

Reminiscences, by Lyman Abbott. Houghton, Mifflin. $3.50.

RUSSIAN LITERATURE

Alfred A. Knopf's publication of Russian books goes forward auspiciously in the three just issued, and a word should first be said for their good plain blue covers. The promised cheaper edition of Prince Kropotkin's *Ideals and Realities in Russian Literature* puts within general reach a criticism of Russian authors more valuable for reference than can be our outside analysis. The translation of *Taras Bulba*, Gogol's powerful story of the Cossacks of the Ukraine, written with the simplicity and reality of a legend, has been thoroly revised by Miss Hapgood and notes and introduction added. *The Precipice*, now first translated into English, is the last of Ivan Goncharov's three great novels. It pictures with both sympathy and blame the restless and aimless, because many aimed, youth of new Russia, and, with more charm and more convincingly, those remaining of the old regime. It shows what is not so common in Russian literature, a happy normal home in a setting of beautiful scenery. As a study of Russian life and views it is enlightening, and its simple, easy style gives "atmosphere," a softening quality in which the masters of Russian fiction often seem lacking.

Ideals and Realities of Russian Literature, by Prince Kropotkin. $1.50. *Taras Bulba*, by N. V. Gogol. $1.25. *The Precipice*, by Ivan Goncharov. $1.35. A. A. Knopf.

RACIAL AND SOCIAL DANGERS

The Great War has driven home to thinking people the stern necessity of preserving and increasing the virility of the race in the face of the advancing luxuries of civilization as well as the national danger of social disorder and ineffectiveness. It is significant of the times that Charles B. Towns, in his instructive volume on *Habits That*

That certainly ought to get the business

Can you feel that way about *your* letters? Do they impress a busy man at a glance as worth reading? Before you sign the next one think it over. The *apparent* importance of your letters is what gets them read, and unread letters bring no orders.

To make your letters *look* their importance, use a striking letterheading on good, substantial Construction Bond. It has the feel and crackle of true quality; it invites confidence. Also, you will secure a well executed letterheading when you use Construction Bond. Only the best equipped and most competent manufacturing stationers can offer it.

Near you—and in the 200 principal cities of North America—there are responsible printers and lithographers who buy Construction Bond direct from us in large quantities and carry it in stock. The result for you is always prompt service on stationery of manifest quality and character. Unusual value is assured by our large volume and economical, direct method of distribution.

$13,400.31 on the Side

Mr F H Dunlap of West Salisbury, N. H., in twenty five years cleared $13,400.31 from hens This is a remarkable record, when it is known that Mr Dunlap is employed ten hours a day in a store and all the time he has to put in with his hens is what he can get morning, noon and night. This $13,400.31 was all made on the side. Nor does Mr Dunlap get fancy prices for what he has to sell. He ships to Boston, and takes current quotations from the commission men there Mr Dunlap began in 1887 with twenty hens In 1910 his poultry profits figured out $1,188.05—and this is all on the side Mr Dunlap's hens have bought him a beautiful home, purchased a horse and carriage sent three boys to school and college besides saving something for a rainy day. Can others do equally well? "Sure thing says Mr Dunlap. "If they will wear out the soles of their shoes faster than they do the seat of their chair. The story of Mr Dunlap's success and his methods is told in the book, "Side Line Poultry Keeping and it is only one out of a score of things to set the blood tingling and make one resolve to get next to the $600,000,000 spent in the United States each year for poultry and eggs

$1,009.31 R. A Richardson of Haverhill Mass., a shoe cutter made his hens pay him $1,009.31 in 1910 and kept working at the bench at the same time. How he did it is told in "Side Line Poultry Keeping

"SIDE-LINE POULTRY KEEPING"

is the name of a new book by the author of "300 Eggs a Year Per Hen, the most popular poultry book ever printed. "Side-Line Poultry Keeping" deals with the business side of poultry keeping as the other dealt with egg production It tells how to make poultry keeping pay It describes the methods by which F. H Dunlap of West Salisbury, N. H., makes over $1,000 a year from eggs, devoting not over two hours a day to his hens Not a detail left out The book tells how to make a start, what breeds pay, how, when and where to buy a farm, how to make a living from the first, describes the most wonderful brooding system in the world, tells how to build the most economical poultry houses and trap nests, how to feed for best results, describes a feed that can be made for 15 cents a bushel and is without a peer for producing eggs, how to make money with pigeons, ducks and market gardening, how to buy and sell to advantage, how to pick out the laying hens, how to put down eggs so that they will keep a year, etc.

Invaluable to every man who wishes to make money on the side, and indispensable to the man who is looking forward to the free, independent, healthful life of the poultry farm. Ninety-six pages; illustrated. **Price 50 Cents,** or with the American Poultry Advocate one year 75 cents, two years' subscription and book for $1.00, or given as a premium for two yearly subscriptions at 50 cents each. Our paper is handsomely illustrated, 44 to 124 pages, 50 cents per year. 3 months trial, 10 cents. **Sample free.** Catalogue of poultry books free.

(Pocono Summit Station, D. L. & W. R. R.)

That belated vacation,—take it among the hills and streams at Pocono Manor

That short Fall or Winter rest,—try a fortnight in retreat, on that Socrate tract, with the "Quackers at the Manor," comfort without ostentation. Golf, tennis and garage; no bar or dancing

J. W. HURLEY, Manager

Handicap, considers the questions involved in addiction to morphine, alcohol and tobacco, more especially from the standpoint of their effects upon society and the race than from the moral point of view. In fact, the moral aspects are discussed largely in their relation to physical and social results. The author has been engaged for many years in the study and treatment of the victims, especially of drug taking, and speaks with much authority and conviction about the prevalence, causes, results and methods of curing this pernicious habit. He is utterly opposed to the ordinary sanitarium treatment of drug cases, because the very conditions under which the cure is sought militate against the desired result. He lays special emphasis on both the psychological and neurological effects of the disease and the social motives essential to a recovery of normal physical health. Mr. Towns extends his discussion also to the alcoholic and narcotic habits, and points out their deteriorating effects upon the race, and the preventive and curative measures that ought to be and have been partially undertaken. The importance of the subject is indicated by his statement that the United States has more victims of the drug habit than it has of tuberculosis. The book is fearless, judicious, convincing and practical.

Habits that Handicap, the Menace of Opium, Alcohol and Tobacco, and the Remedy, by Charles B. Towns. Century. $1.20.

THE WOMEN'S PEACE CONGRESS

The modest, restrained accounts of the *Women at the Hague*, written by the delegates, Jane Addams, Emily J. Balch and Alice Hamilton, show the congress for precisely what it was, no vainglorious attempt to rearrange the world, but a sober effort to do any little that it might be possible to do toward solving the world's fearful problem. Especially interesting is the chapter At the War Capitals.

Macmillan. 75 cents.

WOULD YOU WRITE A PLAY?

Most literary persons who have not written a play intend to do so. But play producers are finicky. They risk large sums in production, which makes them harder to please than editors. *Writing and Selling a Play*, by Fanny Cannon, critically written, from a full knowledge of the inside of the theatre, and play construction, and from experience both as an actress and stage-director with its admirable bibliography, is a safe and sure guide for the novice.

Holt $1.50

NON POLITICAL FEMINISM

The growth of Feminism in Germany and Scandinavia has taken a markedly different course from the similar movement in England and America In many respects it is more radical, the distinctly less political in its aims Katherine Anthony in *Feminism in Germany and Scandinavia*, presents an interesting account of the movement, especially toward *Mutterschutz* (maternity protection) ; and the emphasis put upon distinctively feminine reforms, on dress among others

Holt $1.50

THE PEW LECTURES THE PULPIT

For the first time since the establishment of the lectureship, some thirty forty years ago, the Lyman Beecher Lectures on Preaching delivered at the Yale School of Religion were given last winter in a layman Mr George Wharton Pepper speaks as a Voice from the Church and his clear, thinking and reserved attitude are made more effective by his forceful

and piquant style. His constructive criticism is keen and wholesome. His chapters on teaching and unity are thought provoking, but hardly adequate.

Yale University Press. $1.50

THE LARGER VIEW OF INSPIRATION

George Preston Mains is performing a splendid service in pointing the way for orthodoxy to accept without spiritual disturbance modern views of the Bible and religion. His volume on *Divine Inspiration* is most reverent in spirit, clear in thought, and fully justified by biblical scholarship; a book for both laymen and clergy.

Doran. $1

TOO LITTLE ROMANCE

The history and descriptions recorded by Gov. L. Bradford Prince in his *Spanish Mission Churches of New Mexico* consist too largely of compilations and unimportant materials and lack the picturesqueness of appropriate style. A large number of illustrations are presented, but like the text they fail to give the thrill of romance which one expects from the story of these fading ruins.

Cedar Rapids: Torch Press. $1.50.

ADMONITIONS TO COLLEGE MEN

Too much emphasis cannot be laid upon the importance of religion for college men and of college men for religion. Variety of appeal is no doubt desirable, and the sermons by Rev. Martyn Summerbell, D.D., in *Faith for the College Man*, will attract by their briskness and sturdiness of expression. They would have been more effective if the author had been less antagonistic to some phases of modern thought.

Dayton, Ohio: Christian Publishing Co. $1.

NEW PENOLOGY

The Story of Canada Blackie, edited by Anne P. L. Field, is told in a series of extraordinary letters from one of the most desperate criminals of New York state. These letters show the possible power of sympathy and trust to transform an enemy of society into a loyal and trusted friend of the authorities, and suggest the reasons for Mr. Osborne's remarkable success in evoking sentiments of honor and respectability among convicts.

Dutton. $1.

A GREAT GIRONDIN

Brissot de Warville, by Dr. Eloise Ellery, is the only adequate biography in existence of the chief of the Girondin party in the French Revolution. Brissot's career is of great interest, as he was one of the most versatile men of his epoch: dilettante philosopher, champion of negro emancipation, student of the young American republic and admirer of its institutions, successful political theorist and unsuccessful practical statesman.

Houghton, Mifflin. $1.75.

WAGNER AS A DRAMATIST

To prove that Wagner was first of all a dramatist, without in any sense depreciating his position as a composer, is the theme of the brilliant author of "Foundations of the Nineteenth Century," Houston Stewart Chamberlain, in *The Wagnerian Drama*. Music, he maintains, was to Wagner, even in wonderful operatic scores, merely a means to the end—dramatic effect; and the perfect drama was that which employed to the full the true functions of word, tone and gesture.

Lane. $1.35.

REASON AND FAITH SAY "NO"

In seeking to answer for himself and others the question *Is Death the End?* Rev. John Haynes Holmes, while holding steadfastly to the results of modern science and declaring the entire lack of proof from psychical research, contends for the reasonableness of the immortal life as an extension of individual existence beyond present limitations and death. Belief in the future life is dependent, after all, upon one's conception of God and the human soul.

Putnam. $1.50.

—and every claim is based on what thousands of doctors have written

The claims for Sanatogen are based, not on what we might like to say of it—not on the findings of a few investigators seeking to make a good case for Sanatogen—but on the facts that have been found and recorded by over 21,000 physicians during the eighteen years that Sanatogen has been used as a strength-giving food tonic.

One doctor, or even twenty doctors, might make a mistake in saying that Sanatogen does this or that—but when twenty-one thousand, *over their own signatures*, state their confidence in Sanatogen, there surely can be no chance of a mistake. Thus, when physicians by the thousands record their observations of Sanatogen's beneficial effects—how it builds up the blood, helps digestion, promotes strength and vitality, thereby giving better health to the weak and run-down—we have a right to tell and you have a right to *know* about it.

And thus *you* are safe in placing full confidence in Sanatogen.

Sir Charles Cameron, Public Analyst, City of Dublin, writes: "Sanatogen is of the highest nutritive value. It is an excellent nerve food."

The Czar of Russia's Private Physician: Dr. Eerchmin: "My daughter who was very nervous and anaemic, has been greatly benefited by the prolonged use of Sanatogen. Her appetite improved, her weight increased, and the color of her skin became healthier."

Grand Prize, International Congress of Medicine, London, 1913.

Sanatogen is sold by good druggists everywhere, in 3 sizes, from $1.00 up.

Send for "The Art of Living," a charming little booklet by Richard Le Gallienne, the popular poet-author, touching on Sanatogen's kindly help and giving other interesting aids in the quest for contentment and better health. The book is free. Tear this off as a reminder to write THE BAUER CHEMICAL Co., 20R Irving Pl., New York.

1915

ATLANTIC MUTUAL INSURANCE CO.

ATLANTIC BUILDING, 51 WALL STREET, NEW YORK

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries.

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of	$27,964,578,109.00
Received premiums thereon to the extent of	287,324,890.99
Paid losses during that period	143,820,874.99
Issued certificates of profits to dealers	90,801,110.00
Of which there have been redeemed	83,811,450.00
Leaving outstanding at present time	6,989,660.00
Interest paid on certificates amounts to	23,020,223.85
On December 31, 1914, the assets of the company amounted to	14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

A. A. RAVEN, Chairman of the Board

CORNELIUS ELDERT, Pres. CHARLES E. FAY, 2d Vice-Pres.

WALTER WOOD PARSONS, Vice-Pres. G. STANTON FLOYD-JONES, Sec.

DIVIDENDS

Deposits made on or before January 10, 1916, will draw interest from January 1, 1916.

WILLIAM J. COOMBS, President.
CLARENCE H. DUNSTAN, Treasurer.

The Market Place

ENGLAND AND AMERICAN SECURITIES

The British Government has asked for, and is about to have, authority to purchase or borrow American securities held and owned in England, and to use them in meeting the great and growing British obligations here. It is the intention of the Government to use these securities as collateral for loans from our bankers, but authority to sell them is to be given. Holders not ready to sell, but willing to loan such securities, are invited to deposit them with the Government for two years, but authority to sell them, if necessity should require this, is to be granted, the owner to receive 2½ per cent in addition to the current price in this country. For the purchase of such securities, five years 5 per cent Exchequer bonds are to be issued. These will be for sale at par, and investors may pay for them with American securities or cash.

Sir George Paish, an eminent financial authority who has at times represented the Government, publishes a statement which shows what the need is and will be. Great Britain, he says, must provide for an American export excess or credit balance of about $1,350,000,000 for the year 1915. This practically has been, or will be, done with $400,000,000 of gold, $400,000,000 from the Anglo-French loan, and the sale of $500,000,000 in securities. He does not mean to say, of course, that a complete settlement has been made. Gold is still coming, and the sale of our securities has been going on for a long time. It will be recalled that two warships brought $65,000,000 worth of them. Turning to the coming year, he predicts that the net balance will probably be even $2,000,000,000. For the payment of so great a sum Great Britain must mobilize her American securities.

No one knows how many of these there are in that country. Chancellor McKenna said in the House of Commons that his estimate, for American and Canadian issues, was "anywhere from $1,500,000,000 to $4,000,000,000." The Loree committee, last June, found $2,576,000,000 of American railroad securities in Europe. Industrials were not included. For a long time the sales here for foreign account have been noticeable. Some think that $900,000,000 or $1,000,000,000 of the British holdings have been marketed, and that there may be $1,500,000,000 remaining. Large amounts of our best

BROADWAY SAVINGS INSTITUTION

5 and 7 Park Place, N.Y.

F. E. ANDERSON, Cashier.

Efficient Living

Write W. W. Pierce, 150 W. 42d St., New York, and have him send you that book free of charge.

bonds and stocks are tied up over there in estates or held by trustees. Many are in the possession of insurance companies. Chancellor McKenna said insurance and trust companies that were large holders fully approved his plan.

Probably there will be a satisfactory response to the British Government's appeal or offer. Large quantities will be sold to the Treasury and other large amounts loaned. Trustees will be relieved of impediments by legislation. Canadian securities are included in the project, but there is a promise that the purchases and subsequent sales will not be sufficient to transfer control of Canadian railways to the United States.

While our people cannnot reasonably object to a proposition designed to facilitate payment for great quantities of our products there is a quite natural inquiry as to the effect upon our securities market, if there should be large sales. Chancellor McKenna said that depression of this market would be avoided. It would not serve the British purpose. Why should our people and our financiers regard with apprehension the sale here of these American railroad securities, if the sales are wisely conducted? For three or four months past great traffic and large increases of earnings on congested lines have added financial strength to our railway system and warranted rising prices for railroad shares. Sales by the British Government, thru competent agents, if sales must be made, ought not to cause a decline.

THE CROPS

We had from Washington last week the final estimate of this year's crops, the Department of Agriculture's review of the fiscal year, and the first report about the sowing of winter wheat that will be harvested in 1916. Because a large part of the enormous billion-bushel crop is in hand, and also for the reason that the weather was unfavorable at seeding time, the winter wheat acreage has been reduced by 11¼ per cent. Therefore it is expected that next year's crop of winter-sown wheat will be about 540,000,000 bushels. This year's was 655,045,000.

The final estimates for the present year show a few changes. To the great crop of wheat 9,000,000 bushels have been added, 35,000,000 have been taken from the yield of corn, and there are 7,000,000 bushels more of potatoes. Below are the figures:

	1915	1914
Corn	3,054,535,000	2,672,804,000
Wheat	1,011,505,000	891,017,000
Oats	1,340,362,000	1,141,060,000
Barley	237,000,000	194,953,000
Rye	49,190,000	42,779,000
Buckwheat ..	15,769,000	16,881,000
Flaxseed	13,845,000	15,559,000
Rice	28,947,000	23,649,000
Potatoes ...	433,398,000	462,495,000
Tobacco, lbs..	1,060,587,000	1,034,679,000
Cotton, bales.	11,161,000	16,134,930

The value of the principal farm crops on December 1, at farm prices, was $5,568,773,000. Heretofore the total has never exceeded five billions. If minor crops, animals and animal products be added, the value is about

VANITY FAIR

The most successful of all the new magazines

Don't Be a Social Back Number—

If you are out of step with the whirling progress of our time; if you are removed from its magnetic influence; if, despite your youth, you are becoming an old fogey, or an old maid, or an old bachelor, or an old bore; if your *joie de vivre* is dying at the roots—then you must read Vanity Fair, and presto! you will be nimble-witted and agile-minded again—the joy of the picnic—the life of the grill-room—sunshine in the home.

Six months of Vanity Fair will enable you to ignite a dinner party at fifty yards

Don't settle down comfortably in the ooze. The world is moving, moving on all eight cylinders—some folks are even moving on twelve—and you might just as well move along with them. Don't stall yourself on life's highroad and be satisfied to take everybody else's dust. Hop up and take a little joy ride on the red and yellow band-wagon—Vanity Fair's band-wagon.

Every Issue of Vanity Fair Contains:

THE STAGE: [illegible]

THE OPERA AND MUSIC: [illegible]

THE ARTS: Illustrated news and criticism of [illegible] sculpture.

HUMOR: [illegible]

PEOPLE: Striking and unusual portraits of [illegible] who help make New York a brilliant, interesting city to live in.

SPORTS: An illustrated panorama of [illegible] football, racing, polo and a dozen other outdoor and indoor sports.

ESSAYS AND REVIEWS: [illegible]

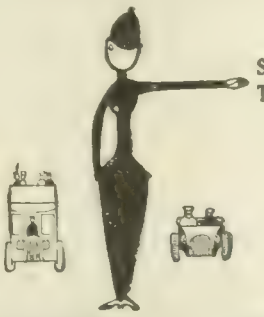
PARIS AND LONDON: [illegible]

DANCING: [illegible]

FASHIONS: [illegible]

DOGS AND MOTORS: [illegible] and timely discussion of them.

SHOPPING: [illegible] alert men and women.



We Promise You, Solemnly

that Vanity Fair is not just one more magazine, or even a new magazine of an old kind—but an ALTOGETHER NEW KIND OF MAGAZINE. It's an entertaining magazine for Moderns.

We are not going to print any pretty girls' heads on its covers. We are going to spare you the agony of sex discussions. We shall publish no dreary serial stories. No diaries of travel. No hack articles on [illegible]. No gloom. No problem stories. No articles on tariff, or irrigation, or railroad rates, or pure food, or any other statistical sub ect.

Try a Little Dollar Diplomacy!

You think nothing, in your poor deluded way—of paying $2.00 for a theatre ticket, or $1.35 for a new novel, but you can secure, for $1.00 (half the cost of a single theatre ticket and less than the cost of a single novel) an entire winter of Vanity Fair and with it more entertainment than you can derive from dozens of sex plays or a shelf full of problem novels.

Stop where you are!
Tear off that coupon!

VANITY FAIR, 449 Fourth Avenue, New York City

in addition to resident work, offers also instruction by correspondence.

For detailed information address

24th Year U. of C. (Div. M.), Chicago, Ill.

$10,000,000,000. Secretary Houston's estimate for last year is $9,873,000,000. The area on which our crops were grown exceeds that of Germany, France, Belgium, Holland, Denmark and Sweden combined. Altho this year's cotton crop is only 11,161,000 bales, against last year's 16,134,930, the smaller yield is worth more to the growers than the preceding crop that broke the record, because the average price on December 1 of this year is found by the Department of Agriculture to have been 11.3 cents a pound, while it was only 6.8 cents a year ago. For this reason the value has risen from $525,324,000 in 1914 to $602,393,000 in 1915.

EXPORTS AND CONGESTION

There are indications that the record of exports, and of the excess of exports over imports, will be broken again by the official reports for December. In the week that ended with the 11th the exports from thirteen ports which represent 91 per cent of our foreign trade were $98,408,000, with a balance in our favor of $60,350,000. Returns from all the ports will probably show an export total of $100,000,000 for that week. The highest figures thus far have been, for an entire month (October), $334,000,000 of exports and a credit excess of $186,000,000. It may be that this excess for the full calendar year will be more than $1,900,000,000.

This remarkable outward movement did not relieve the freight congestion on the railways and at the ports. Additional embargoes were ordered by railway companies. The Baltimore and Ohio refused to take grain for export from Baltimore. At that port there were 4000 loaded cars, and the elevators, with 2,500,000 bushels, were full. The same company ordered an embargo on lumber. Embargoes on flour for export were proclaimed by the New York Central and the Erie. The New Jersey Central refused to take freight for coastwise shipment from New York, and all commodities sent from the Pacific coast for export at that point. There were 45,000 loaded cars on the Eastern lines or at the terminals. Port congestion here is due partly to similar congestion on the other side of the Atlantic.

The following dividends are announced:

American Brake Shoe and Foundry Company, preferred, quarterly, 2 per cent; common, quarterly, 1¾ per cent, both payable December 31.

Broadway Savings Institution, 4 per cent per annum, payable on and after January 17, 1916.

Greenwich Savings Bank, 3½ per cent per annum, payable on and after January 17, 1916.

D. C. Heath & Co., preferred, quarterly, 1¾ per cent, payable January 1, 1916.

Irving Savings Institution, 4 per cent per annum, payable on and after January 17, 1916.

New York Central Railroad Company, 1¼ per cent, payable February 1, 1916.

South Brooklyn Savings Institution, 4 per cent per annum, payable on and after January 15, 1916.

United Fruit Company, quarterly, 2 per cent, payable January 15, 1916.

The United Gas and Electric Corporation, first preferred, 4 per cent, payable December 31.

Electric Storage Battery Company, common and preferred, 1 per cent, payable January 1, 1916.

Manhattan Savings Institution, 3½ per cent per annum, payable on and after January 17, 1916.

Bowery Savings Bank, 3½ per cent per annum, payable on and after Monday, January 17,

Insurance

Conducted by

W. E. UNDERWOOD

T. B. S., Depauville, N. Y.—The Postal Life was examined some time this year by the New York Insurance Department but the report has not yet been made public. Until it is, I am unable to answer your questions.

W. A. L., Douglas, Ga.—Your policy is in no danger, and it would be unwise to let it lapse now. The company is not prospering in the same degree that many others are, but its liabilities are fully secured. Surplus earnings have been reduced, thus raising the policyholders' net cost. That seems to be the most serious feature.

A. M. D., Culleoka, Tenn.—At the beginning of this year the Jefferson Standard Life Insurance Company of Greensboro, N. C., had assets of $5,520,203; a net policy reserve of $4,110,177, and a surplus of $570,808, of which $350,000 is its capital. That is to say, it has a net surplus of $220,808. The company as now constituted is a consolidation of several North Carolina companies. The management is of good character and ability, and the company may be classed as rendering average service to policyholders.

T. C. C., Millington, Tenn.—The Atlantic Life Insurance Company of Richmond, Va., is a good ordinary institution, financially and managerially, with $2,639,216 of assets at the beginning of this year and a policyholders' surplus of $428,165. The only thing that makes a long established life company a better earner of dividends for policyholders is that competition with them compels the younger and smaller companies to spend a larger proportion of their premium receipts to secure new business. Agents of the latter receive larger commissions because their policies are harder to sell. Their general expenses are also greater in proportion.

W. P., Eldred, Fla.—All your policies in the Aetna Life, Equitable Life and Germania Life are of the first order. While in my judgment the Southern States Life does not, in many ways, measure up to the standard of what is best in life insurance, such information as I can secure respecting it prompts me to admit that it is safe; and as you say you like the policy and want to keep it if it is secure, my advice is that you do not let it lapse. In regard to your policy in the Florida company, to me the prospects are not encouraging. Were I similarly situated I would get whatever is possible and quit.

J. B. & Son, Hurleyville, N. Y.—The mutual principle is the correct one in insurance of all kinds, because its purpose is to distribute over all the insured the losses incurred by the few. It works admirably in life insurance, for the reason that death is certain, and the laws governing its occurrence can be definitely stated. Up to the present, pure mutuality is not practicable when applied to fire or casualty insurance as a whole. There are a few successful mutual fire insurance companies, but only because they restrict their operations to a limited class of risks, like slow burning, thoroly constructed and protected mills. Even they are hard hit at times, as at Salem, Mass., a year or so ago. The two mutual companies you name are good and have been successful. They may continue so, provided they are not involved in a conflagration somewhere. Policyholders are liable for all the debts of a mutual company, particularly incurred and unpaid losses.

"I Now Hear Clearly"

You, Too, Can Hear!

Inasmuch as 200,000 users of the "ACOUSTICON" have had the same results from it as Mr Garrett Brown, whose photo appears above, we feel perfectly safe in urging every deaf person, without a penny of expense, to try and entirely at our risk, to accept a thorough trial of the

1916 Acousticon

No Deposit FREE No Expense

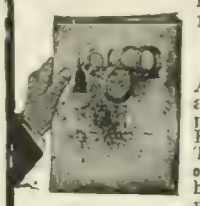
All you need to do is to write saying that you are deaf and will try the "ACOUSTICON." The trial will not cost you one cent, for we even pay delivery charges.

WARNING! There is no good reason why everyone should not make as liberal a trial offer as we do, so do not send money for any instrument for the deaf until you have tried it.

The "ACOUSTICON" has improvements and patented features which cannot be duplicated, so no matter what you have tried in the past, send for your free trial of the "ACOUSTICON" today and convince yourself—you alone to decide. Address

GENERAL ACOUSTIC CO., 1320 Candler Bldg., New York

Toronto, Ont. Office, Royal Bank Bldg.



You Can Earn $250 A MONTH With This NEW MACHINE

Many are doing $3,000 a year and better with this new machine. You can too. You need no experience. We teach you FREE in one simple lesson. Start right at home. Everywhere there's plenty of money and big cash profits waiting for ambitious men.

THIS IS THE BUSINESS FOR YOU

A business all of your own. Requires little capital and grows fast into a real factory—a real manufacturer. Open a Tire Repair Shop with Haywood Equipment. Let the money roll in. Auto tires need mending constantly. There is your profit. Owners eager to give you their business. It means a saving of money to them, and big cash returns for you.

JUST MAIL THE COUPON

For this FREE Book

A valuable guide to power and wealth. It gives the complete details. How to start. How to succeed. Tells all about your opportunity. Shows how easy the work can be done. Shows the big profit in this new field. Write for it today. A postcard will do. Get your FREE copy.

A WELLS PROPHECY THAT CAME TRUE

HOW THE ENGLISH ARMY HAS REALIZED HIS GLOOMY "ANTICIPATIONS"

WHEN H. G. Wells in 1902 essayed the role of prophet and in his volume entitled *Anticipations* tried to forecast the future of the world on scientific principles, he excited the same popular interest that any guess at coming events arouses, but there were few who took him seriously. Now, however, *Anticipations* makes very interesting reading. Much of it has already come to pass, and we see that Wells's chief mistake lay in putting his forecast too far ahead; for instance, when he says that he is "inclined to believe . . . that very probably before 1950 a successful aeroplane will have soared and come home safe and sound."

The chapter on the new forms of warfare and the inadequacy of the old methods of management and training is full of warnings which it were well for his country to have heeded. This is shown if we compare that feeling passage in which he describes a future British army setting out to meet a scientifically organized foe with an actual battle on the Artois field as seen from the German side. The first column is quoted from *Anticipations*, published thirteen years ago. The second column is taken from Kellermann's picture of the battle of Loos, September 22, 1915, published in the *Continental Times* of Berlin. Bernard Kellermann, one of the most brilliant of the younger writers of Germany, is well known in America thru his novel, *The Tunnel*, dealing with a submarine passage to Europe.

THE PROPHECY, 1902

I seem to see, almost as if he were symbolic, the gray old general—the general who learned his art of war away in the vanished nineteenth century, the altogether too elderly general with his epaulettes and decorations, his uniform that has still its historical value, his spurs and his sword—riding along on his obsolete horse, by the side of his doomed column. Above all things he is a gentleman. And the column looks at him lovingly with its countless boys' faces, and the boys' eyes are infinitely trustful, for he has won battles in the old time. They will believe in him to the end. They have been brought up in their schools to believe in him and his class, their mothers have mingled respect for the gentlefolk with the simple doctrines of their faith, their first lesson on entering the army was the salute. The "smart" helmets His Majesty, or some such unqualified person, chose for them lie hotly on their young brows, and over their shoulders slope their obsolete, carelessly-sighted guns. Tramp, tramp, they march, doing what they have been told to do, incapable of doing anything they have not been told to do, trustful and pitiful, marching to wounds and disease, hunger, hardship, and death. They know nothing of what they are going to meet, nothing of what they will have to do; religion and the rate-payer and the rights of the parent working thru the instrumentality of the best club in the world have kept their souls and minds, if not untainted, at least only harmlessly veneered with the thinnest sham of training or knowledge. Tramp, tramp, they go, boys who will never be men, rejoicing patriotically in the nation that has thus sent them forth, badly armed, badly clothed, badly led, to be killed in some avoidable quarrel by men unseen. And beside them, an absolute stranger to them, a stranger even in habits of speech and thought, and at any rate to be shot with them fairly and squarely, marches the subaltern—the son of the schoolburking, share-holding class—a slightly taller sort of boy, as ill-taught as they are in all that concerns the realities of life, ignorant of how to get food, how to get water, how to keep fever down and strength up, ignorant of his practical equality with the men beside him, carefully trained under a clerical headmaster to use a crib, play cricket rather nicely, look all right whatever happens, believe in his gentility, and avoid talking "shop."

So the gentlemanly old general—the polished drover to the shambles—rides, and his doomed column march by, in this vision that haunts my mind.

I cannot foresee what such a force will even attempt to do against modern weapons. Nothing can happen but the needless and most wasteful and pitiful killing of these poor lads, who make up the infantry battalions, the main mass of all the European armies of today, whenever they come against a sanely organized army. There is nowhere they can come in; there is nothing they can do. The scattered, invisible marksmen with their supporting guns will shatter their masses, pick them off individually, cover their line of retreat and force them into wholesale surrenders; it will be more like herding sheep than actual fighting. Yet the bitterest and cruellest things will have to happen, thousands and thousands of poor boys will be smashed in all sorts of dreadful ways and given over to every conceivable form of avoidable hardship and painful disease before the obvious fact that war is no longer a business for halftrained lads in uniform, led by parson-bred sixth-form boys and men of pleasure and old men, but an exhaustive demand upon very carefully educated adults for the most strenuous best that is in them, will get its practical recognition.

THE FULFILLMENT, 1915

They made the essay with absolutely new, absolutely antiquated tactics—tactics which are no longer recognized in this war.

It was something really unheard of! Our staff officers stood and regarded it—their mouths open in astonishment. It was observed, shortly before noon, that the English were advancing toward our positions in dense masses, eight lines deep in echelon—from Loos. A hail of shells that churned up the ground was supposed to smooth the way for the storming columns. At the same time, to the east of Loos (there is a bit of rising ground there scarcely noticeable as you drive over it in a wagon, called Hill 70), we saw English artillery come riding up—quite open—in the broad of day—under the naked heavens! These batteries carried bridge materials with them for the crossing of trenches and natural obstacles. The English general we caught describes this action as one that was especially "sporting." There can be no doubt about its dashing quality. But there was more to come. In the distance, on the level plain, one or two English cavalry regiments were visible—Dragoons of the Guard.

Eight lines of infantry? Artillery driving across the open? Cavalry in the background? It was really unbelievable! It was the plan of a veritable pitched battle from a forgotten age, the masterly idea of a senile brain, which had come limping along fifty years behind the times! Generals in our day grow obsolete as rapidly as inventions and sciences. The war has taught us that the blood of nations, the incalculably precious blood, is to be entrusted only to the freshest, the most elastic, the most gifted of military spirits, the very cream of the crop. Those old celebrities of theirs, staggering under their orders, should have been consigned to relay stations by the English.

The English troops carried out their attack with a splendid gesture, with admirable *bravoure*. They were young and *they* bore no orders on *their* uniforms. They carried out the commands of their celebrated and senile authorities, carried them out with a blind courage—in this day of mortars, telephones and machine-guns. As magnificent as was their bearing, even so pitiful was the collapse of their onslaught.

Before the eightfold storming columns had been able to make ten steps, they came under our combined fire—rifles, machine-guns, cannon. The batteries were lying in wait and they obeyed the telephone. The English knights and baronets had not reckoned with this. Fresh reserves came running up and were mown down in the cross-fire of our machine-guns. Those riding batteries came to a miserable end. They too came within the zone of the machine-guns and our heavy mortars, notified by telephone, got hold of them so swiftly and so thoroly, that they were not even given time to unlimber. The regiments of cavalry that were waiting in the background, ready to come dashing thru, got salvoes of the heaviest shells full in their faces and drew back without having drawn a blade from the scabbard. That finished the pitched battle. And the attack broke to pieces in front of our wire entanglements.

A prodigious number of their dead lay before our trenches. We had made 800 prisoners, among them a colonel, four majors, and fifteen officers. At a conservative estimate, the losses of the English in this single section of the division, may be fixed in dead and wounded as at least 50,000. It was clear that, apart from a small local success, it had been a disastrous rub for the Britishers. Never before has it been so clearly proved that war is not a sport for a dozen or two of privileged dilettantes.
